SOME printers sell their products according to the cost of manufacture; others do a big business for a short time at competitors' prices.

A GENERAL store in an American manufacturing town supplies all the local mills with their pay envelopes free of charge for the privilege of printing on them this announcement: "If this envelope is presented at our store within twenty-four hours of the date stamped thereon, it will be good for a five-per-cent. discount on any purchase." As a result of this publicity, the store is crowded on the evening of pay-day.

British Trade with France.

Paper Imports and Exports.

The following figures show the total value of the imports of paper from France, also the value of the goods retained in the United Kingdom, during 1912 and the four preceding years:—

	Total Imports.	Retained in U.K.
1912	£294,250	£231,887
1911	247,958	211,577
1910	216,785	189,187
1909	237,522	212,598
1908	228,103	205,142

The goods retained in the United Kingdom comprised the following:—

PRINTINGS AND WRITINGS.

On Reels.

1912	1,416 cwts.	£3,144
1911	2,470 ,,	10,128
1910	626 ,,	1,413
1909	846 ,,	1,288
1908	1,191 ,,	3,966

Not on Reels.

1912	10,536 cwts.	£36,406
1911	11,726 ,,	35,155
1910	10,637 ,,	32,233
1909	37,177 ,,	127,891
1908	33,904 ,,	115,654

PRINTED PAPER.

1912	6,751 cwts.	£34,039
1911	5,758 ,,	29,237
1910	5,493 ,,	29,592
1909	12,255 ,,	50,128
1908	13,420 ,,	63,740

PACKINGS AND WRAPPINGS.

1912	20,478 cwts.	£27,552
1911	20,251 ,,	23,835
1910	17,201 ,,	20,786
1909	13,670 ,,	17,688
1908	10,634 ,,	12,667

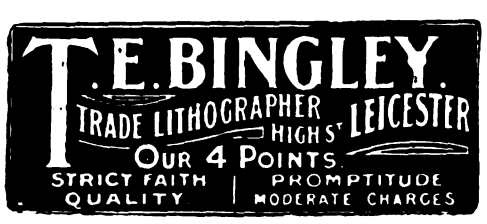
STRAW, MILL AND WOOD PULP BOARDS.

1912	4,884 cwts.	£7,485
1911	4,017 ,,	6,760
1910	5,259 ,,	8,785
1909	4,923 ,,	9,603
1908	5,518 ,,	9,115

UNENUMERATED AND ARTICLES OF PAPER.

(Included in "Paper for Printing and Writing," and 'Goods manufactured, unenumerated" prior to 1910).

1912	33,456 cwts.	£123,261
1911	27,034 ,,	106,462
1910	27,556 ,,	96,378



The exports of paper—all kinds—from the United Kingdom to France were as under:—

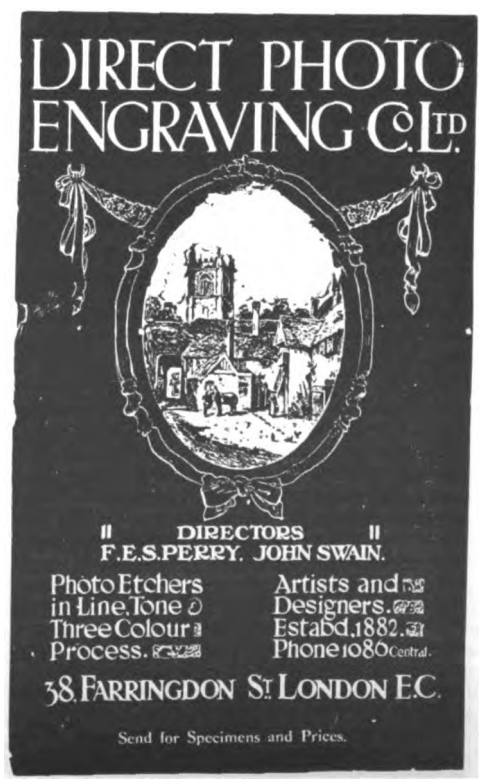
1912	152,809 cwts.	£272,257
1911	148,450 ,,	264,644
1910	138,217 ,,	248,010
1909	125,180 ,,	225,914
1908	117,830 ,,	216,421

An Ingenious Sorting Machine.

A clever automatic machine for the sorting of postal orders that have been paid is now being tried in the money order department of the General Post Office. The invention is the outcome of the ingenuity of two members of the staff of the department, Messrs. Frost and Rubardto. As a preliminary the orders have to be automatically punched on issue, and for the purposes of the experiment Somerset House authorities had 1,000,000 of the twenty shilling variety subjected to the process. They are placed in the machine by the sheaf by a lady assistant, whose only duty afterwards is to take them in neat piles from the ten little boxes when the process is complete. The economic value of the contrivance lies in its capacity for taking care of itself, for one attendant will be able to look after six machines, and therefore do the work of six skilled sorters. When the invention is examined, what seems to be great complexity resolves itself into a simple piece of ingenuity. The perforations are contrived near the edges of the postal orders so as to engage projections from a revolving drum corresponding to the ten numbers 0–9. The actual discrimination is thus affected in the initial stages, and all that remains to be done is to pass the notes over endless bands and drop them into convenient receptacles within 24 inches of the mouth of the machine. The inventors claim that it will lighten enormously the work of dealing with the 200 million orders of various kinds which arrive at the rate of about 700 lbs. per day at the Post Office headquarters throughout the year.

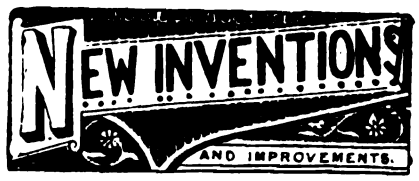
The machine is also expected to be useful in banks and other establishments where large numbers of cheques or other documents have to be dealt with by hand.

Types from the Monotype.



The two faces, of which specimens are given below, have been cast on the Lanston Monotype in various sizes, from 10-point to 14-point as shown in the examples.

¶THE IMPRINT OLD FACE IS CONSIDERED BY SOME TO BE THE MOST beautiful face ever cut; but, whilst this statement may be stretching the *bounds of admiration, we believe it to* be among the best book faces of its kind appearing in many years—*and a better face* than has been produced for any other composing machine. The capital letters possess exceptional clearness and readability, whilst the lower-case letters have been shorn of those old-face peculiarities which some classify as "individuality" and others term "eccentricities." Evenness, roundness and clarity have been achieved. By comparison with the *Italics* of many Romans, it will be noticed that the Imprint Old Style *Italic* possesses a slight extra strength of line, which imparts to the italicised word or paragraph evenness of colour in its relation to the Roman. Usually, most Italics dab the printed page with light patches.



¶ THE MONOTYPE PLANTIN OLD STYLE IS AN ALMOST EXACT DUPLIcate of a beautiful and artistic face, *designed and produced by the famous* French printer, Christopher Plantin, in Antwerp, about the middle of the 16th century, and then known as the Augustin Roman. *Other well-known founts* of Plantin production are Canon d'Espagne and Moyen Canon Flamand. In this face the lines have been somewhat strengthened, as well as modified, to meet the requirements of the modern mechanical process of printing. *The printer and consumer* (or buyer) of printed matter should note the proportions and "colour" of this letter, and the character of the capital letters.

A GOOD CUSTOMER, says the *Harris Monthly*, is not always the man who gives the big order, nor yet the one who pays his bills promptly—not but these traits are good ones in any customer—but the really good customer is the man who buys what he wants at the same price and on the same terms as other buyers get and who pays for what he buys when he says he will. No customer can be said to be a good one who is always trying to beat down a price or obtain an extra favour in terms. A good customer is not the man who is always seeking to claim allowances for shortages or errors that are partly or wholly fictitious Nor is he a good customer who sends a cheque on the twelfth day with the tenth day discount taken off. In fact, a good customer is a man who gives and expects a fair deal in every transaction. Large buyers are apt to be pursued and fawned upon until they are spoiled and get an inflated idea of their importance and insist upon concessions that they are not entitled to. A small buyer who is a good customer is worth more than a large buyer who is not.

THE *General Weekly Shipping List* issue of September 27th is in celebration of the completion of its sixty years' publication. Originally established in 1853 to record the none too certain arrivals of smart clippers and sailing ships from the distant colonies, this useful little handbook has grown automatically with the national oversea trade. Local tradition professes to identify the building, St. Mary Axe House—the home of the *Shipping List*—with the residence of that venerable and benevolent figure, Riah the Jew, immortalised by Dickens in "Our Mutual Friend." Whilst hesitating to express an opinion on so disputable a matter it is interesting to know that the yellow, overhanging, bow-fronted, plastered building, now, alas! pulled down, answered to the description recorded by the novelist. We cordially wish this useful little reference work a continuance of that long-lived prosperity which has constituted its bright and cheery yellow cover a familiar object in mercantile offices. The subscription to the *List* is one guinea.

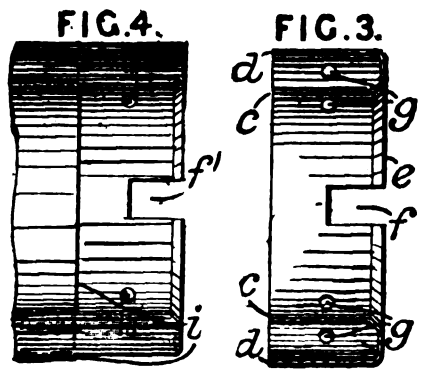
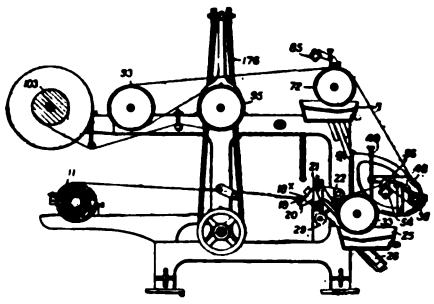
Clamping Blankets on Presses.



Mr. A. J. Ford has patented an invention that relates to means for clamping an offset blanket on the cylinder of an offset printing machine, so that the blanket may be readily adjusted axially of the cylinder or removed. One end of the blanket F is secured in a clamp N, N^1, the two parts of which are held together by screws. This clamp slides freely between lips O, O^1 on the edge of the cylinder. The other end of the blanket is held in a similar clamp N^3, N^4 on a reel bar L re-

tained by ratched gear M, m. The clamp N^3, N^4 is held on the bar L by a rib P and a metal lip Q screwed to the bar L. On slackening the blanket, it can be moved laterally to any desired position, or the blanket and the clamps can be removed by rocking the clamps clear of the retaining ribs P, O^1. Several blankets may be secured side by side.

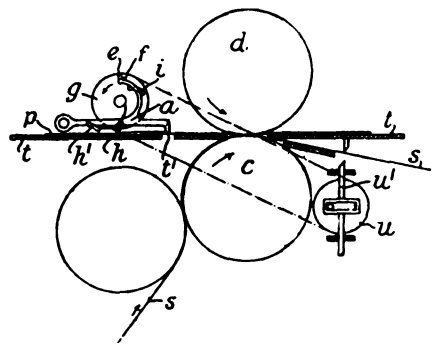
Winding Paper.



Cores for winding paper rolls on, of the kind formed of several layers of tough paper cemented together to form a strong tube, are under an invention by Mr. T. Elixman, fitted at their ends with protected bushings made of one piece of sheet metal which can be applied to the cores without any considerable reduction in thickness of the material on the ends of the core. As shown, the bushing is formed of sheet metal, preferably steel, drawn and

rolled into a shell shaped to conform to the tubular body of the core, and having the same exterior and interior dimensions as the core. The walls *c*, *d* of the bushing are connected by an annular member which is bevelled at *e* towards the wall *c* and rounded towards the wall *d*. The thickness of the walls *c*, *d* is about that of two layers of paper of the core, so that by scoring the core internally and externally along the lines *i*, removing two layers of paper, and bevelling the inner edge and rounding the outer edge of the core, it is ready to receive the bushing. A notch *f*, for receiving a projection on the winding shaft, is made in the bushing before applying it, and a similar notch f^1 is made in the core after the bushing is applied. Rivets are driven through holes *g* to secure the bushing in place on the core.

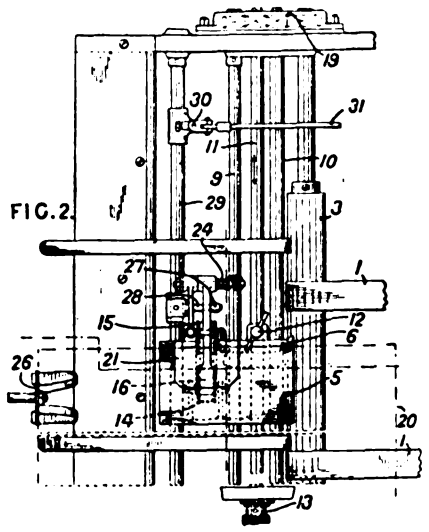
Coating Paper.



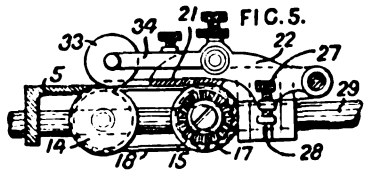
A machine for coating paper on one or both sides with carbon, etc., comprises an adjustable feed-roll 11, from which the web passes to a tensioning and smoothing device thence over a coating roller revolving in a dope thence over an equalising device for removing excess of carbon, under a smoothing roller, over a second coating or cooling roller, and round driving and cooling rollers to a winding drum. The tensioning and smoothing device consists of two angular bars 19, 22 and two round bars 20, 21, mounted in brackets 18×, which can be adjusted vertically and angularly. The dope pan 25, in which the first coating roller 33 revolves, is vertically adjustable by means of rack-bars 26 and pinions 29, and the dope pan 75, in which the second coating roller 72 dips, is similarly adjusted. The equalising or scraping device consists of wire-bound or screw-threaded rod 56 resting on a tube 54 and capable of being rapidly reciprocated across the coated paper by means of a cam device. The tube 54 is angularly adjustable and depends from arms 48, which are pivoted on the ends of the smoothing roller 38 and can be adjusted by means of screw-threaded rods 49 passing through swivel-blocks in the ends of the arms. The rod 56 may be replaced by a scraping-shoe adjustably resting on the

roller 33 and provided with a scraping-edge or wire-wound rod, over which the coated paper passes. When the paper is to be coated on one side only, the second coating-roller may be used as a cooling-roller, and the upper equalising device and tube 85 are then thrown out of action. The web passes round the driving and cooling rollers 93, 95 to the winding-drum 103, and during its passage it may be further cooled by a fan mounted on the bracket 176. The driving gear is situated at one side of the machine together with a system of valved pipes for conveying heating or cooling fluids to the rollers 33, 38, 72, 93, 95, the tubes 54, 85, and the pans 25, 75. Messrs. C. W. and K. B. Mayer are the patenteesi

Roller Copying Presses.



In an invention by Mr. F. Soennecken, the mechanism requiring to be operated intermittently, for example the feed device for the documents, the severing device for the copying strip, the device for printing the notice "copied," etc., is automatically controlled from the document or from the copying strip, which acts to throw the required mechanism into gear at the required intervals. The documents *p* fed over a table *t* pass together with the copying strip *s* between the press rolls *c*, *d*, the strip then passing the severing blade u^1 actuated by a crank disc *u*. A pivoted feeler *a* rests on the document where it passes over



a gap t^1 in the table, and is thus supported with the lug *e* in the path of a lug *f* on a frictionally-driven disc *g* gearing by a band with the disc *u*. When the document passes clear of the feeler, this falls and releases the disc *g*, which then rotates, causing a wiper h^1 carried by a spring *h* to feed the next document, driving the cutter disc *u*, and, by means of a *i* thereon enagaging the lug *e*, raising the feeler to re-engage the lug *f* when the disc has completed a revolution. In a modification, the feeler consists of electric contacts which when a document passes clear complete a circuit through an electro magnet to withdraw a pivoted armature out of engagement with a frictionally-driven disc. In another modification, the feeler consists of a pivoted spring-controlled bell-crank bearing on the document opposite a groove in a guide roller behind the press rolls, and also engaging a lug in a frictionally-driven disc. When the document passes clear, the feeler rises into the groove and releases the friction disc, a cam on which returns the feeler into locking engagement. In another modification, the feeler, comprising an electric contact, bears on the copying strip, which is perforated at required intervals to permit a circuit to be completed for releasing a frictionally-driven disc, whereby intermittently actuation of the required mechanism is effected as before.

Sheet Feeding Apparatus.

In apparatus for feeding sheets to printing, folding, and like machines, patented by Mr. E. J. Hallberg, the sheets 20 are fed by tapes 1 over a plate 5 up to the front-stops 26. The plate 5 slides loosely on the shafts 9, 10, and is clamped by a screw 12 to a rod 11 which can be accurately adjusted by a screw 13. At one side of the plate 5 is an upstanding gauge 6, against which the sheets are drawn by an endless band 16, passing around rollers 14, 15, the latter of which is driven continuously by a bevel-wheel 17 feathered on the shaft 9, which is driven by gearing 19 from the roller 3. The sheet while being registered is pressed down into contact with the band 16 by a clamp plate 21, depressed by a spring 24, but raised at intervals by an arm 28 on the shaft

29, which engages a set-screw 27 on the arm 22. The shaft 29 is rocked by an arm 30 and a link 31 from some moving part. In a modification shown in Fig 5, the plate 21 is formed with an aperture, through which a roller 33, mounted on an arm 34 pivoted to the back of the plate 21, projects to press the sheet into contact with the band 16. The roller 33 is pressed down by a helical spring. The moving band 16 may be placed above, and the moving plate 21 below the sheet.

Washing-up RAGS
PER 20/= CWT.
Perfectly Clean.

Printers' Managers and Overseers ASSOCIATION.

YORKSHIRE CENTRE.

The September monthly general meeting of the Yorkshire Centre was held at the Golden Lion Hotel, Lower Briggate, Leeds, and, as is usual, the opening meeting of the autumn session took the form of a smoking concert, with Mr. H. Walkington, the President, in the chair. This being Mr. Walkington's first appearance in the chair after a painful illness of twelve months' duration, he was most heartily welcomed by the company present, which included many ladies and friends. The following is the programme :—

Quartette ... ... Comrades. ... ...
The Lyric Prize Quartette.
(Messrs. Watson, Bannan, Coghlan and Holmes.)

Song ... ... Loving is so Sweet. ... ...
Miss Doris Dickson

Song ... ... The Curfew. ... ...
Mr. H. Holmes.

Humorous Quartette—
When Father Laid the Carpet on the Stairs.

Song ... ... The Carrier Dove ... ...
Mr. J. Watson.

Song ... ... Island of Dreams. ... ...
Mr. Coghlan.

Recitation ... Gentleman Ranker. ... ...
Mr. H. Pullan.

Song ... ... The Valley of Laughter .. ..
Encore .. .. Another Day. ... .
Miss Doris Dickson.

Song ... ... A Southern Wine Song. ... ...
Mr. N. E. Twitchen.

Quartette Don't you Cry, Ma Honey. ... ...
The Lyric Prize Quartette

Song ... ...Widow Malone. ... ...
Mr. D. Bannan.

Recitation ... ... Fra Giacomo. .. ..
Mr. H. Pullan.

Humorous Quartette—
The Gay Young Gosling.

Song ...Till the Sands of the Desert Grow Cold. ...
Mr. N. E. Twitchen.

Quartette I wish to Tune my Quivering Lyre ...
The Lyric Prize Quartette.

Humorous Recitation Graffenstein. ... ...
Mr. Harold Pullan.

Song ... ... Mountain Lovers ... ...
Mr. D. Bannan.

Quartette ... O' a' the Airts. ... ...
The Lyric Prize Quartette.

The beautiful rendering of the various part songs by the Lyric Male Prize Quartette and the individual songs rendered by them were highly appreciated, and indeed were a musical treat. Miss Doris Dickson sang three songs in a very taking manner, and should develop into a very fine singer. Mr. N. E. Twitchen used his fine baritone voice to great advantage in his songs. Mr. Harold Pullan, who is an elocutionist of remarkable ability, thrilled his audience with his dramatic recitals, and his humorous items caused some aching sides with the laughter he provoked Miss Edith Dalby accompanied the various artistes at short notice in an accomplished manner.

A hearty vote of thanks, moved by Mr. G. W. Wilkinson, was seconded by Mr. Richmond, and carried unanimously, and a response in good form by Mr. Bannan brought a most enjoyable evening to a close.

By a recent ruling of the postmaster-general at Ottawa, interpreting a section in the Canada Official Postal Guide, publications containing double-page advertisements will not hereafter be entitled to second-class mail privileges in Canada. The section in the Guide reads as follows :—"All advertisements in periodicals must be permanently attached, therefore, by binding, stitching, basting or otherwise, and the sheets containing same must be of same size as the pages of the publications—advertisements printed on sheets exceeding the size of the regular pages are inadmissible, though folded to the size of the regular pages. In fact, all pages of the publication must be of the same size, form and make-up."

The French cardboard and cardboard-box manufacturing industries will in future be provided with a special organ of their own, in the shape of *La Cartonnerie*, a new monthly periodical, the first number of which has just been issued. The offices are at 171, Rue Lafayette, Paris.

St. Bride Typographical Library.

Sir,—We collect in this library, among other things, specimens of job printing, and mount and store them with the view of using them for exhibition purposes as well as for the education of our students. For example, there is to be a great International Exhibition of Printing next year at Leipzig, and we are preparing to show a selection from our portfolios illustrative of the work of the printers of this country. Will master printers kindly help us by sending specimens of their work ?

We are, etc.
C. J. Drummond, Chairman.
R. A. Peddie, Librarian.

DUSTING

Device for Bronzing Machines.

The dusting appliances in which ribbons, made of plush, skin, or other similar materials, move in opposite directions transversely to movement of the sheets of paper, present this inconvenience that the edges of the sheets offer a certain degree of resistance to the dusting ribbons, especially when the paper is thick, the ribbons being quickly worn away by friction. Owing to this friction the bronze powder is shaken off the ribbons and falls on the paper to be scattered about. Sometimes also the ribbons tear and crumple the paper. To avoid such inconveniences it has been proposed to run the dusting ribbons obliquely behind one edge of the sheet and then obliquely in front of the other edge. This idea, however, is not very practical because a wide margin is left near the two edges which the dusting ribbons do not touch. Thus the dust always remains on these margins and flies about. A recently published French patent, by Messrs. Kohlbach and Co., of Germany, points out these failings and claims to have found a remedy for them. In the new machine the dusting ribbon rolls are worked in such a way that the ribbons are only moved obliquely on the side of the sheet opposite to the direction in which the ribbons run, and they are conveyed into the plane of the sheet on the other side. The ribbons can also be run in pairs or sets from the middle of the machine to the exterior beyond the sides and in the plane of the sheet. There are rotary brushes or similar appliances under the rolls on the outside of the machine which rub adhering dust from the ribbons. These brushes, etc., are placed in boxes communicating with an aspirator which sucks the bronze powder falling from the ribbons to convey it into a suitable receptacle. The ribbons run over open channels on the exterior of the machine connected with an aspirator so that suction acts directly on the ribbons.

British India.

Last Year's Imports of Paper, Boards, Machinery and Stationery.

Mr. Frederick Noël-Paton, the Director-General of Commercial Intelligence, in India, has issued his official report for the year ending March 31st, 1913. Very little reference is made to paper supplies, but the statistics show that the following were amongst the principal imports during 1912-13, compared with the year 1911-12:—Paper and pasteboards £963,967, compared with £785,000 the previous year, an increase of about 22·5 per cent. Stationery: £420,214, as against £367,665 in 1911-12, an increase of 14·3 per cent. The average for paper and pasteboards during the past three years was £737,734, and for stationery £346,774.

The report states that in 1912-13 paper mill machinery was imported to the value of £18,000.

Amongst the other principal imports caustic soda was imported to the extent of £53,000, an increase of £1,000 over the previous year, and sulphur £36,000, a rise of £2,000 when compared with the corresponding twelve months.

Printing and lithographic materials (not including machinery) were imported into China during 1912 to the value of £41,245, compared with £40,894 in 1911, and £35,423 in 1910. The supplies came mostly from Japan and United States.

A NEW DEPARTURE.

Trade Notes.

On October 17th the contract for the supply of tram tickets for passengers will be closed at the Cardiff tramway headquarters.

To celebrate the sixtieth anniversary of the *Field*, several improvements in the arrangement and illustration of the paper are made in the current issue that make for the improvement of the paper's appearance.

An exhibition promoted by the Senefelder Club will be held at the gallery of Messrs. Goupil and Co., Bedford-street, Strand, when a collection of works by artist lithographers of Germany, Italy, Austria and Holland will be shown.

The death has taken place at Auckland, New Zealand, of Mr. William Sholto Douglas, editor for the past ten years of the *New Zealand Herald*. Mr. Douglas was a native of Perthshire, and was one time editor of the *Leeds Daily News*.

We understand that Mr. Bertram Christian, literary editor and assistant editor of the *Morning Leader* and *Daily News and Leader* successively since 1902, has resigned that position, and has acquired an interest in the publishing house of Messrs. James Nisbet and Co., Ltd.

A Multiple-Magazine Linotype machine and a double-demy Miehle will be in operation on the stand of Messrs. Dobson, Molle and Co., Ltd. (of Tudor-street, E.C.), at the Advertising Exhibition at Holland-park Rink, W., which will be open from October 13th to 18th inclusive.

Lord Curzon of Kedleston has opened a fund to purchase a unique collection of Derbyshire books, MSS., deeds, and maps left by the late Sir Henry Bemrose, of Derby, for public use and custody. Two thousand pounds are asked for, and, in addition, Mr. Carnegie has promised Lord Curzon £1,000 towards housing the library.

A new monthly theatrical journal has appeared under the title of the *Thespian*. The price is sixpence and it is described as "the official organ of the Dramatic Clubs Association and the Federation of Scottish Amateur Operatic and Dramatic Societies, and an official organ of the British Empire Shakespere Society."

Overseer's Notice.—A meeting of the representatives of the Printers' Managers and Overseers Association will be held at Manchester, on Saturday next, to discuss the question of trade custom as to notice affecting managers and overseers, with the Executives of the Typographical Association and the Amalgamated Society of Lithographers. Delegates from the Provincial Centres of the P. M. and O. A. affected will attend, and the Parent Association will be represented by Messrs. F. W. Seeley and E. C. Moyce. A meeting of the Manchester Centre takes place in the evening, which the delegates will attend.

This week the *Daily Mirror* has entered on a new phase of its career as an illustrated daily, and it is now printed and published simultaneously in London and Manchester. Readers both in the North and in the South will profit by the change, for it means that with two centres of publication the whole of the kingdom will be covered much more exhaustively, and that the North and Midlands will have much later news in the *Mirror* than has been hitherto possible. The offices of the *Manchester Courier*, at 22, Cannon-street, Manchester, have been utilised for the *Mirror*. Extensive alterations were necessary, and practically the whole of the interior of the big building has been reconstructed. No expense has been spared to make it one of the best-equipped newspaper offices in the country, both in plant and apparatus, and in arrangement.

In the City of London Court, on Friday last, a claim was made by Joseph Asher and Co., pictorial post card publishers, 3 4, Ivy-lane, E.C., against G. Pitcher, stationer, Old-road, Great Clacton, for £11 2s. 6d., picture post cards supplied. Defendant declared that the debt was due from his wife, in whose business the post cards were used. His wife wanted to cancel the order, and plaintiffs would not let her do so. They could not sell the cards. He was living with her. She bought them on sale or return. Plaintiffs' manageress said they never allowed their travellers to sell on sale or return. Defendant said he had advertised twice in the papers that he would not be responsible for his wife's debts. He told the traveller she might give him an order. Judge Rentoul: And yet you would not be responsible for what she ordered. In the end, the case was adjourned for the attendance of the plaintiffs' traveller who took the order, the Judge recommending the parties in the meantime to settle the matter between themselves.

According to *Kemp's Mercantile Gazette* there were four failures in the printing and stationery trades of England and Wales for the week ending Friday, October 3rd, the corresponding week in 1912 showed three.

The death has taken place of Mr. William Williams, printer, of Holywell. He was a native of the town, and commenced business in 1858. He was for many years the printer of the magazine *Y Winllan*. Mr. Williams had reached the advanced age of 82 years.

Messrs. Linotype and Machinery, Ltd., have been awarded the Diploma of Grand Prix for their exhibit at the Ghent International Exhibition of the following machines: Linotypes, models 4 and 9, L. and M. and Centurette two-revolution presses, L. and M. Offset Litho Rotary, and L. and M. Automatic Metal Furnace.

In the October issue of the *Royal Magazine* there is an excellent selection of reading matter. H. Hesketh Prichard begins a new series of telling stories entitled "Tales of Grim Prisons," and stories by F. Morton Howard, Dorothy Rose, Herbert H. Vahey, and others, together with interesting articles, poems, and humour make up a good number. The cover is a striking reproduction of a painting by C. E. Swain, entitled "Crumbs from the Rich Man's Table."

A shopping week has been held in Tunbridge Wells, and the *Tunbridge Wells Advertiser* has taken advantage of the opportunity to appear with over fifty illustrations of shop fronts in the town showing the window dressings and special shows made for the occasion. There are several other illustrations in the issue, including a fine half-tone portrait of the new Mayor, and all are excellently printed. Many of the photographs were only taken on the day previous to publication and some smart work was required to have the blocks ready in time for insertion. The result is very creditable to all concerned in the production of the issue.

In the form of a handsome bound volume of over 450 pages, Messrs. Fredk. Ullmer, Ltd., Standard Works, Cross-street, Farringdon-road, E.C., issue a complete catalogue of machinery and materials for printers, bookbinders, rulers, lithographers, stereotypers, die-stampers and other sections of the allied trades. The book contains illustrated particulars of almost everything that can be wanted in the printing office or bindery in the way of machines, appliances and materials, and is peculiarly rich in specimens of ornamental brass rules, dashes, circles, ovals, etc., and in woodwork, chases, rollers, galleys and miscellaneous items there are many special lines. The printer or binder who desires to keep up with the times will find here most things required to complete his outfit. The book is excellently printed on good paper, and a copy should be in the hands of every printer.

Printing Company Prospectuses.—In the City of London Court, on Friday last, Messrs. J. G. Hammond and Co., Ltd., printers, 32, Fleet-lane, E.C., applied to have Mr. J. Forrest Walters, Copthall House, Copthall-avenue, E.C., committed for non-payment of £15 10s. 2d. due for printing a company prospectus for him. Before the case was heard the defendant and one of the plaintiffs' staff had a scuffle at the back of the court. Some confusion resulted, and the business of the Court was for a minute or two suspended, the contestants meanwhile brushing the dust from their clothes. Mr. Harry Strouts, plaintiffs' solicitor, said that the defendant could easily pay the debt. Defendant said he could only pay £1 a month. He had practically no means except what he earned. Judge Rentoul: A common complaint. Defendant was ordered to pay £1 a month, with committal in default, and he then complained that one of the plaintiffs' men improperly obtained a company prospectus from his office on the previous day, and the scuffle arose because he tried to get it back. John Dillon, in the plaintiffs' employment, said that the names of the Cincinnati Pitsburg Electric Trust and the British American Finance and Constructional Trust, Ltd., were on the defendant's door. He asked a typist to give him a prospectus of the former, and it was handed to him. Defendant said he was employed to do work for those companies, and the names were put on the door so that the correspondence should be delivered. It was a mistake of the typist to part with the prospectus. Mr. Strouts said they got the prospectus to show that the defendant was connected with the formation of the companies named. Defendant could have the document back now. The prospectus was therefore handed over to the defendant, and the parties left the Court.

Fire.—A fire which broke out on Monday destroyed the premises of Messrs. Keene and Co., printers, Roper-street, Hull. Several employees had to be rescued by the fire brigade from the windows. The flames started on the ground floor amid the machinery, and spread very rapidly among quantities of celluloid used in the production of Christmas cards. Within an hour only the walls remained. Over 150 girls were working in the upper rooms when the fire broke out, but they escaped with the loss of hats and jackets, which were destroyed.

A further contribution of £100 has been made by Mr. E. Festus Kelly to the Printers' Pension, Almshouse and Orphan Asylum Corporation.

Tenders Accepted—For the execution of printing and the supply of books for the year ended September 30th, 1914, for the Boston Guardians; *Lincolnshire Standard*, Ltd., Boston. For the supply of printing and stationery for the Grantham Union; Messrs. Palmer and Son. For printing, stationery, etc., for the Rotherham Corporation Tramways; H. Garnett and Co., Ltd., F. W. Crookes and Sons, and W. Taylor and Sons. For the supply of paper and paper bags for the Prescot (Lancs.) Union, Messrs. J. W. and A. Appleton, St. Helens.

Mr. Frank Colebrook ("Quads" of this journal), has been invited and agreed to give the opening address of the session at the dinner of the Sales Managers' Association at the Holborn Restaurant, on Thursday, October 16th, an association with which several gentlemen well known in the printing or newspaper world are connected, though its membership includes representatives of all branches of commerce and manufacture. It happens that Mr. Colebrook has also been invited and has agreed to give the opening address of the session of the School of Business Science at the Hotel Cecil, on Friday, October 17th.

Victoria and Albert Museum.—An official guide has been provisionally appointed by the Board of Education for six months from October 1st, to conduct parties of visitors round the Victoria and Albert Museum. No charge will be made for his services, and no gratuities are to be offered. The guide will start from the entrance hall at 12 noon and 3 p.m. daily, except on Sundays. Each tour will last about an hour, and various departments of the Museum will be visited. The guide's services will also be obtainable without charge by special parties between the hours of 10 and 12 a.m. and from 4 to 6 p.m. on any week-day, but four days' notice at least should be given. Application for such special guidance should be made either verbally to the doorkeeper at the main entrance, or by letter addressed to the director and secretary, but applications in respect of parties of less than six or more than twenty should be made only by letter.

Newspaper Illustration.—The first of the second course of lectures promoted by the Glasgow and West of Scotland District of the Institute of Journalists was delivered on Saturday evening, when Mr. Carl Hentschel, C.C., took as his subject "The Progress of Process Illustration in Journalism." Mr. Hentschel dealt with the many early experiments and the methods of working, followed by an entertaining exposition of the later discoveries and developments which made process engraving a commercial success. Half-tone and three-colour work was specially dealt with, and some excellent lantern illustrations of the different methods were given. The half-tone illustrations which appeared in the Scottish newspapers, he said, were finer than many of the London journals, and he also expressed the opinion that in the matter of colour printing Scotland gave them many of their finest examples. A discussion followed, after which Mr. Hentschel explained the points of practical interest which had been raised.

Tenders Wanted.—For the supply of passenger tickets and ticket punches for the Cardiff Corporation; particulars on application to Mr. A. Ellis, Central Offices, The Hayes, Cardiff.—For the supply of stationery, books and forms, etc., for the Glamorgan Constabulary, for the Standing Joint Committee; particulars from the Chief Constable's Office, Canton, Cardiff.—For printing and stationery, books, etc., required by the various departments for three years for the Sunderland Corporation; forms of tender from the Borough Treasurer and Accountant's Office, Town Hall, Sunderland.—For printing and stationery for the Guardians of Elham Union; particulars from Mr. E. Lovick, 29, Bouverie-square, Folkestone.—For a supply of prize books, etc., for the Gillingham Education Committee. Tender forms may be obtained from Mr. A. Johns, 4, Gardiner-street, Gillingham. For supplying new books and rebinding books, for the Committee of the Macclesfield Free Library; particulars from the librarian, Free Library, Park-green, Macclesfield.—For the supply of insulating paper for

Digitized by Google

the Bradford Tramways Department; particulars from the Tramway Offices, 7, Hall Ings, Bradford.

The City of London Printers' Musical Society will commence their winter season on Monday next, October 13th, with a high class bohemian concert at Anderton's Hotel, Fleet-street, a capital programme having been arranged by Mr. G. W. Jones, the hon. musical director. It is interesting to record that since the formation of this society in 1876, nearly £6,000 have been gathered for the Printers' Pension Corporation. All persons interested in the printing and allied trades should certainly support so useful a society, the hon. secretary of which is Mr. Geo. Tams, 31, Brockley-road, S.E., the hon. treasurer being Mr. T. W. George, Carmelite House, E.C.

Machine Rulers, Bookbinders, Printers, and Kindred Trades Overseers' Association.

Inauguration of the Winter Session.

The members of the Machine Rulers, Bookbinders, Printers and Kindred Trades Overseers' Association, inaugurated their winter session by holding a smoking concert at their headquarters, "The Ship," Newgate-street, E.C., on Tuesday evening last. There was a good attendance, and the president (Mr. J. Dixon) occupied the chair. The concert is one of the most successful fixtures the Association provides, and the "Feast of music and flow of soul" are ardently looked forward to by the members, who also make the occasion suitable for social intercourse and the introduction of new names to the roll of membership. In its own quiet way the Association is fulfilling most laudable objects, worthy of the attention of all men connected with the bookbinding and printing trades, and these may be summarised as follows:—(*a*) To afford, by periodical meetings of members, opportunities for mutual intercourse, combined with entertainment and social relaxation; (*b*) To assist members when temporarily out of employment; (*c*) To afford legal assistance to members in case of dispute; and (*d*) To provide a sum to be paid to the widow or nominee of deceased members. Since the establishment of the Association in 1904 some heavy spade work has been done by the officials, particularly the past-presidents and Mr. George A. Eden, the secretary, who have left nothing undone to interest their fellow-workers to look into the future and prepare for a "rainy day." There are now close on 140 members in the Association—men who are a credit to the City of London, and the trades they represent—and the progress they are making in their united efforts to help on the objects they have in view, not only in the City but in the provinces, speaks volumes for their untiring energy and enterprise. Of course, a pleasant feature of the Association is the entire absence of "sameness," and this is accounted for by the fact that the officials, in drawing up their lists of forthcoming events, never overlook the educational aspect. They endeavour to enlighten their members on many subjects, such as electricity, chemistry, trade subjects, field rambles for nature study, etc., etc., and these are found most useful in broadening the views and knowledge of men who are engaged in trades like bookbinding, printing, etc., to which the public in no small degree look for more than average intelligence than is the case in other industries where a craft prevails. Therefore, any effort to help the educational side of the Association is appreciated, and added to this an assembly round the festive board during the year and an occasional concert or two make the life of the bookbinder and the printer—or those associated with them in the Association—pleasant and happy, and there is no reason why such excellent objects should not be encouraged and advanced.

Thanks to Mr. F. Pearse an enjoyable programme was arranged for Tuesday evening. Mr. Donald Ball acted as pianist, and for nearly three hours laughter, interspersed by applause, sounded and reverberated at "The Ship." Miss Violet Simpson gave an ideal interpretation of "She Wandered down the Mountain Side." She has a very pleasant soprano voice of good range, and her powers were brought out in "Come sing to me," which won her a well-deserved encore. Miss Lily Aveline contributed an old favourite "Angus Macdonald," and she was also much enjoyed in the duet, the "Venetian Boat Song," with Mr. Wm. Aspinall. Mr. Aspinall also rendered "My Dreams" with effect. Mr. Mark Crawford, who readily responded to the invitation of Mr. Dixon during a conversation on Saturday evening last, joined in the programme and gave a delightful song in his usual good style, and finished up with the monologue, "The Old Bachelor," which received unstinted applause. Mr. W. Archer was listened to with pleasure in "The Sea Road," as also was Mr. A. Wilmott, who gave "The Mountain Lovers," etc. Mr. R. Ford's singing of "Tommy Lad" was impressive and sympathetic, and credit must also be extended to Mr. F. Archer, whose rendering of "Little Grey Home in the West" was very pleasing. The humorous element was particularly entertaining. "Len and Albert," two very well-known entertainers, better known in the bookbinding and printing trades as Len Kingston and Albert Leyton, provoked a great deal of merriment by their "turns." "Len" sang "Obedient Billy" in his droll style, and Mr. Leyton gave a musical entertainment of no mean order, and also assisted his colleague in the duet, "The Bugle Call," which was very successful. Mr. Warwick Gordon, another old favourite, contributed "Songs and Opera in Ragtime" and the "Ragtime Curate," and Mr. Austin White rendered "We all went marching in" and the "Night Watchman's Story" in good style. Mr. Henry Evans was in his element in singing "Beauty of the Guards" and "Suspicions" and his style was greatly admired. Another favourite was Mr. Tom Burrow, whose ventriloquial entertainment was a pleasant change and original. Mr. A. Rourke's singing of "Sofia's Sweetheart" and "My Sporting Guide" was also well received and applauded.

During an interval, the President (Mr. J. Dixon) made a brief speech. He said he was proud to be able to say that the Association was still maintaining satisfactory progress, financially and numerically, in membership. (Applause.) He was also pleased to see Mr. Grimwood present that evening, and he would like to offer him the welcome which they extended to every man who joined the Association. (Applause.) "I feel sure," added the President, "that Mr. Grimwood will find, as all of you have done in the past, that there are some very good and excellent qualities in this Association. We are as brothers always holding out our hand of friendship and brothership to all new members, and no man can say but that everyone of us try to help any brother when he is in difficulties, either inside or outside his shop. I hope Mr. Grimwood will do his part towards this Association; that he will help to carry out its rules, and if he does he will never regret the day he became one of us." In conclusion, the President said he was proud to see so many present that evening. Their vice-president was detained away owing to the troubles at J. Burn and Co. However, that was not a speechmaking evening, as they were out to enjoy themselves, but he would just say that they would be glad to receive the names of new members for 1913-14. He would ask them to rise and drink to the continued prosperity of the Association and the whole of the members. (Applause.)

The toast was well received, and Mr. Grimwood remarked that he was very proud to become a member of the Association—in fact he did not anticipate meeting such a nice jolly lot of members. He felt quite proud now at becoming a member, and he would do all he could to help on the Association.

The singing of the National Anthem concluded a most enjoyable entertainment, the talent at which enabled the members to inaugurate their winter session amidst the brightest and happiest circumstances that are congenial to a well managed association.

High-Class Numbering Machines.

In an advertisement on page 7 of this issue there will be noticed an announcement of a new seven-movement numbering device that is being put on the market by Mr. Samuel Insull, Senr., the general European representative of the Original Bates Manufacturing Co., 34, Queen-street (Cannon-street), E.C. The new appliance is a perfect piece of mechanism that numbers in consecutive, duplicate, triplicate, quadruplicate, sextuplicate, twelve-times and repeat, and is made with all the perfect workmanship and high finish of the well-known original Bates automatic hand-numbering machines.

Another "Bates" Lever Numbering Machine for irregular numbers (non-automatic) is also worth attention, as its uses are wide and varied, and for numbering cheques, orders, tickets, vouchers, or other documents it is quite indispensable. The numbers are moved by pressure of a lever which brings the next higher number into use. Needless to say the fine finish that characterises all the original "Bates" machines is also here, while the wearing parts are made of hardened steel. We refer our readers for further particulars to Mr. Insull's advertisement, or they may secure full descriptive information by applying at the address given.

The London Bookbinders' Strike.

The relations between Messrs. J. Burn and Co., and those of their employees in the bookbinding department on strike, still continue to be unaltered, and there is every indication of the dispute being continued for some time further. Negotiations have for the time been broken off between the two sides, and there is now a complete deadlock. A conference was held between representatives from Messrs. J. Burn and Co., the Master Printers' Association, the Printing and Allied Trades Federation, and the Federated Committee of the National Union of Bookbinders and Machine Rulers, but no settlement was reached. Mr. Stubbings, the secretary of the Federated Committee, at the conclusion of a meeting of that body, said that the conference was somewhat abortive, and had concluded without a date being fixed for another one. Certain suggestions regarding the conditions of work and rate of pay at the Royal Mills, Esher, were submitted, but these were not acceptable to the representatives of Messrs. Burn and Co., and the Federated Committee did not see their way to recede from the terms laid down in regard to the Esher establishment of that firm. The strike is now about to enter on its ninth week, and both sides seem as determined as ever not to give in.

Special Prepaid Advertisements.

STONHILL & GILLIS, 58, Shoe Lane, London, E.C.

Situations Wanted.

LITHOGRAPHY.—WORKING FOREMAN requires change; well up in all departments of the Trade, Colour and Commercial; specimens and references—Litho., 20, Ferndale-road, Clapham, London, S.W. 13252

MACHINE-ROOM OVERSEER (progressive) seeks situation where Three-Colours and Half-Tone work needs specialising and improving (Midlands preferred).—Eborall, Orlando-drive, Carlton, Nottingham. 13263

Business for Sale.

PRINTING BUSINESS (established 1812) for Sale; modern plant; turnover about £1,400 per annum; prosperous Cathedral city; price £2,000 inclusive of building and cottage.—Apply to H. H. Horsman, Printers' Valuer, 70, Burgoyne-road, Harringay, London, N. 13259

Machinery and Plant for Sale.

ALL ELECTROTYPERS and STEREOTYPERS should write H. Williams and Co. for their latest catalogue of machinery, and Electroline Enamel Paste, for producing fine art stereos.—Engineers, Red Lion Works, Warner-street, Rosebery-avenue, E.C. 12343

MOTOR, ½-h.p., speed 1,200, volts 214, amp. 4.3, together with starter; in good condition; price £7.—Seen at 4, Cambridge-avenue, Kilburn. 13256

Miscellaneous.

FOREIGN STAMPS.—Collection of 2,650 varieties for Sale, including many rare and unused; mostly in fine condition; neatly mounted in a Whitfield King "Standard" Album.—Can be seen by appointment, if desired, at the office of this journal, or particulars furnished on application to No. 13261, Office of the British and Colonial Printer and Stationer, 58, Shoe-lane, London, E.C. 13261

TO PRINTERS.—For Sale, cheap, several large Body Founts of new Type, 8-point to 12-point in both O.S. and Modern Faces; portion very slightly used and remainder in founders' packets; specimens and weights on application.—Spottiswoode and Co., Ltd., 5, New-street-square, London, E.C. 13265

TO PRINTERS, PUBLISHERS and ALLIED TRADES.—TO BE LET, as a whole or in Sections, an important Block of Buildings covering an Island Site conveniently situated close to Fleet Street. They contain four well-lighted upper rooms with lofty basement. Total floor space, 12,625 sq. ft.—Rent and further particulars of Messrs. Farebrother, Ellis and Co., 29, Fleet-street, E.C. 13264

The New U.S. Tariff.

AFTER having been discussed by the House of Representatives and the Senate for over five months, the new American Tariff Bill has reached its final stage, received the signature of the President, and has become law, although the whole of the clauses do not come into operation immediately, those referring to sugar, for instance, not taking effect until May 1st, 1916. The new measure shows a considerable revision of the old duties, and, with a few exceptions, in a downward direction, while there are considerable additions to the free list, and the immediate effect is expected of a cheapening of the cost of living in the United States. Whether this will have a tendency to a lowering of the present high scale of wages remains to be seen. In the sections relating to the trades we represent there have been considerable reductions in the duty. Printing presses now pay 15 per cent. *ad valorem*, instead of 30 per cent. *ad val.* Stereo-plates, half-tone plates, photogravure plates, and other printing surfaces under the new tariff are assessed at 15 per cent., as against a former 15 to 25 per cent. *ad val.*; and litho stones and similar materials have been given a reduction of 25 per cent. on the former duties. In most cases printing, writing and other papers have had their rates considerably reduced, and printing paper of a value of under 2½ cents per pound is admitted free of duty, as are also parchment and vellum. Books, engravings, music and charts are free in many cases, and so is old type, stereo metal, and lino bars, if for re-manufacture. With such reductions in the import duties it will now be possible for British traders to secure a market for their wares in the United States, where even in past years, in spite of the almost prohibitive duties, British machinery and British manufactures secured a footing. The Americans have for many years found a market for their goods in this country. It is now up to us to find a market for our goods in theirs.

* * *

Training the Young Printer To-Day.

IT is quite a commonplace to hear people deplore the decadence of the old apprenticeship system; its iteration becomes monotonous at times, and it certainly serves no good purpose. The printing trade has experienced such vast changes and such important developments in the last two decades that there has been a total change in the industrial conditions. It is questionable whether the old apprenticeship system could be made to answer at all in these modern days of high specialisation and huge business concerns. The old apprenticeship system, excellent as no doubt it was, has had its day, and now we require something more scientific to meet the more complex situation. It is all very well to talk about the value of the personal influence exerted by the master printer who was in close touch with his apprentices in the old days, but how would it be possible, even if he had the opportunities, for one man to impart a thorough knowledge of all the highly technical branches of the modern printing craft, or even a tithe of them, to a number of lads. At best he could only give a theoretical smattering. Undoubtedly the training must be at the hands of several men who are experts in particular subjects, and this can only be adequately obtained in the many excellent trade schools that have been established to meet the needs of modern requirements. And this without neglecting the indispensable practical experience to be gained by "going through the shops," as the engineers expressively term the practical elementary part of their training; that is to say, serving a certain number of probationary years in a printing office. The one without the other would be a one-sided training that would never turn out an efficient printer. But are the printing trade schools being utilised to the extent they should be? According to a Camberwell Alderman they are not. Praiseworthy efforts have been made to attract young printers to the schools and to infuse a real practical interest in the study of our grand old craft, but what poor requital have they received. We can remember several admirable exhibitions of the best products of the ancient and modern press, painstakingly arranged and catalogued by those learned in the art preservative, but the attendance at them has been miserably small. We now have open an exhibition of lettering at the South London Art Gallery which forms a liberal education in the development of the art of formal writing, illumination and fine printing to be obtained with a minimum of time and trouble. Whether the announcement of the formal opening was insufficiently advertised or not, it is a fact that the number present could hardly have reached the twenties, and these composed perhaps wholly of those having a direct interest in the formal ceremony. It is to be hoped that better appreciation will be shown before the exhibition closes on November 8th. Many employers are encouraging their apprentices to attend printing classes, and there is room for the exertion of much more influence in this direction, particularly in respect to the afternoon classes, in regard to which there are some notable examples worthy of emulation. With the employers' Association commending the classes at the one end and the men's Society at the other something ought soon to be done to improve the present state of things.

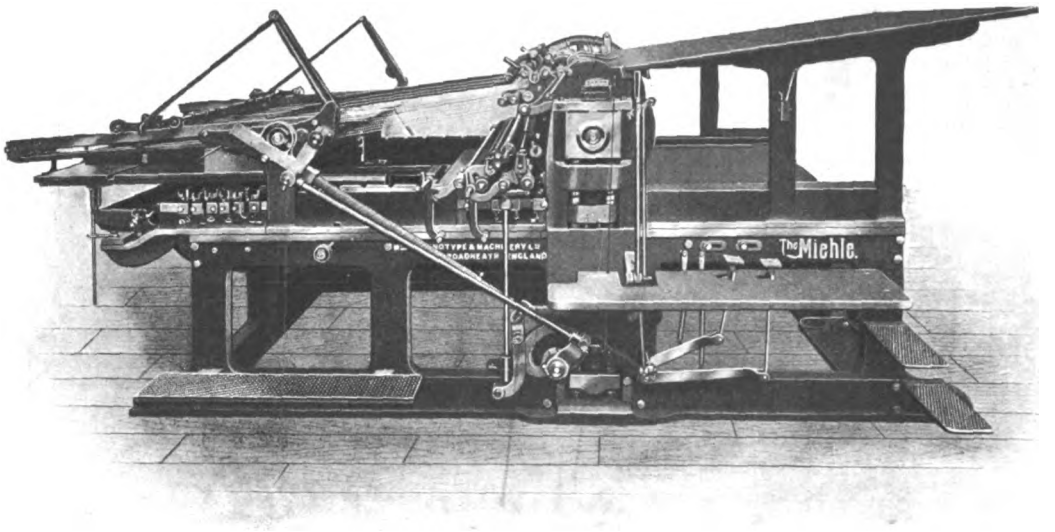
The New Companies Act.

Our readers should note that a new Companies Act has come into operation. It is styled the "Companies Act, 1913," and Royal assent has been given to it. All documents in the future must now refer to "The Companies Acts, 1908 and 1913." The new Act was passed quickly in order to remove the misleading theory, "once a private company, always a private company" arising out of the recent action, Park *v.* Royalties Syndicate, Ltd. According to this decision, a limited company might begin as a private company with all its conveniences, subsequently issue more and more shares, and gradually pass into a public company, whilst being still nominally and legally a private company. The new Act provides that every private company shall forward to the Registrar of Joint Stock Companies with each annual return a certificate, signed by a director or the secretary, that the company has not since the date of the last return, or since the incorporation of the company, issued any invitation to the public to subscribe for shares or debentures. If the number of shareholders exceeds 50, such excess must consist of past or present employees of the company.

* * *



British Imports of Colonial "News."

Newfoundland is beginning to occupy a very prominent position as an exporter of "news," and practically the whole output of the Colony finds a market in the United Kingdom. The imports during August, for instance, amounted to £76,193, over 48 per cent. of the total value of the receipts of reel paper from all countries, it being evident, therefore, that Norway and Sweden have to face a formidable competitor. The product of the Anglo-Newfoundland Co.'s paper mill has to a large extent ousted both English and foreign news, as an assured market is found owing to the associated publishing interests, which control the *Daily Mail*, *Evening News*, the *Daily Mirror*, and *Weekly Dispatch*. According to Lord Northcliffe—who is at the present time on a visit to Newfoundland, and was one of the principal speakers at a meeting held at Montreal the other day, under the auspices of the Canadian Club—his company are turning out the best news-print coming to England from any part of the world. During the eight months ended August last Newfoundland supplied the British market with £262,527 worth of reel paper (an increase of £93,538 compared with the corresponding period of last year), whilst the receipts from Norway were of the value of £318,211 and from Sweden £172,382.

The editor of a Bavarian newspaper which published a caricature of the meeting of German Princes at Kelheim has been sentenced to a month's detention in a fortress.

The Miehle
TRADE MARK

IS PRODUCING THE FINEST COLOUR, BOOK, AND JOBBING PRINTING THROUGHOUT THE UNITED KINGDOM AND COLONIES.

In half-tone work, the Miehle reproduces every gradation of tone contained in the blocks—from soft high-lights to heavy solids.

Its reputation for perfect colour printing (which includes efficient rolling power and the features which make for dead register) is embraced by the standard phrase "Miehle Quality," which means essentially Miehle printing.

The Miehle is fitted with two deliveries, which at will deliver the product printed side up or printed side down.

The inking equipment provided on this press consists of sixteen rollers and a large ink table; of these, four are forme rollers with reciprocating riders and rollers over them (nine in all, arranged in pyramid form). The other seven rollers distribute the ink on the table before it reaches the forme rollers.

This press is built in six sizes; the smallest size takes a sheet up to 26-in. by 39½-in. and the largest size 46-in. by 66-in.

Miehle presses are also supplied in tandem, so arranged that the units may be disconnected and used as single machines.

The Miehle is Manufactured and Sold by

LINOTYPE AND MACHINERY LIMITED

who have the sole and exclusive right to manufacture and sell The Miehle in the United Kingdom and Colonies (except Canada).

Financial.

Offices of the *British and Colonial Printer and Stationer*,
58, SHOE LANE, LONDON, E.C.
WEDNESDAY, Oct. 8th, 1913.

THERE has been a good demand for credit since last mid-week, but there have been considerable disbursements, and conditions have remained comfortable. A small amount falling due at the Bank of England last Friday was repaid, and there have since been some fairly heavy calls. The available supply of credit does not seem to have been affected, and rates remain steady. The tendency in the discount market is a shade harder. Egypt is still taking gold, and the net influx for the week to date amounts to £734,000. Yesterday £850,000 came up for settlement, of which India and the trade requirements will absorb £150,000, about £100,000 will be taken for the Continent, while the balance is expected to go into the Bank. The tendency in stock markets has been dull and depressed, and uncertainty prevails in regard to the political outlook. Consols are depressed and lower than a week ago, the quotations being $72\frac{7}{8}$ to 73 for money and $73\frac{1}{8}$ to $73\frac{1}{4}$ for the account.

The miscellaneous industrial market continues quiet and uninteresting, and fluctuations are few and narrow. Amalgamated Press Ord. have fallen $\frac{1}{4}$ to 7—$7\frac{1}{4}$, and Ilford Pref. have risen $\frac{1}{8}$ to $\frac{3}{32}$—1_{32}^{1}. Business has been done during the past seven days in Amalgamated Press Pref. at 21s. 6d., 21s. 3d., 20s. 6d., and 21s. 3d.; in Associated Newspapers Pref. at 20s. $7\frac{1}{2}$d. and 20s. $7\frac{1}{2}$d.; in Cassell and Co. at 97s. 6d.; in *Financial News* Pref. at 15s. $7\frac{1}{2}$d. and 15s. 6d.; in Ilford Ord. at 14s. 6d., 14s., 15s. 3d., and 14s. 6d., and in the Pref. at 18s. 9d. and 18s. 6d.; in *Illustrated London News* and *Sketch* Pref. at 13s. 6d., and in the Ord. at 3s. 9d. and 3s. 3d.; in International Linotype at 73 and 75; in Lanston Monotype at 9s.; in Linotype and Machinery A Deb. at $52\frac{3}{4}$, $53\frac{1}{2}$, $51\frac{1}{4}$, and $51\frac{1}{2}$, and in the B Deb. at 35, $36\frac{1}{2}$, 36, $35\frac{1}{4}$, and $35\frac{3}{4}$; in Edward Lloyd Pref. at 21s. 9d. xd, 21s. 6d. xd. and 22s. 3d. xd.; in George Newnes Pref. at 16s. $10\frac{1}{2}$d., 16s. 9d., 17s., 16s. 6d. and 16s. $10\frac{1}{2}$d.; in C. Arthur Pearson Pref. at 73s. $1\frac{1}{2}$d. and 76s. 3d.; in Raphael Tuck and Sons Pref. at 78s. 9d.; in Waterlow and Sons Def. Ord. at $25\frac{1}{4}$ xd., $26\frac{3}{4}$ xd., and $25\frac{5}{8}$ xd.; and in the Pref. Ord. at $11\frac{1}{2}$ xd.

COMMERCIAL INTELLIGENCE.

Re EDWARD JOSEPH MILIFFE,
Stationer.

The public examination of this debtor, who carried on business at 172, Clerkenwell-road, E.C., was held recently before Mr. Registrar Linklater. The receiving order was made on July 23rd, on the debtor's own petition, and he lodged accounts showing total liabilities £1,610 14s. 10d. (unsecured, £1,395 5s. 9d.), and net assets £310 10s. 7d., after deducting £45 9s. 1d. for payment of preferential claims. Questioned by Mr. W. P. Bowyer, official receiver, the debtor stated that having previously been employed in the trade, he, in 1896, commenced business with a Mr. Hutchinson as designers and engravers at 62, Farringdon-road, E.C., as "E. J. Miliffe and Co." The partnership was dissolved after about a year's trading, and witness continued the business alone until 1898. He then joined a Mr. Hawkes in partnership, and carried on business at 102, Tottenham-court-road, W.C., and 2, Racquet-court, Fleet-street, E.C., as photo-engravers and designers, until 1905, when witness retired from the firm, and received £150 as his share. After being in employment for two years, witness, in March, 1907, commenced another business under the style of "E. J. Miliffe and Co.," as newsagents and stationers at 172, Clerkenwell-road, E.C., with a borrowed capital of £50. In 1908 he was joined in partnership by Mr. Howes, who brought in £120 capital, and became entitled to a one-half share in the business. In July, 1910, they opened a branch at 2, Gresham-buildings, E.C. That partnership was dissolved in the following August, upon terms that Mr. Howes took over the business at Gresham-buildings, and paid £47 for the stock and fittings. Since August, 1910, witness had continued to trade at 172, Clerkenwell-road, alone. From January, 1912, until June 28th last, he printed and published a paper entitled *Ireland in London*. It was not a success, and he made a net loss of £216 in connection with it. He attributed his failure and insolvency to loss by bad debts, loss on the publication of *Ireland in London*, to excess of drawings over profits, and to lack of capital. Books of account were kept recording all business transactions, but they did not show a liability of £201 for moneys borrowed, the result being that the annual balance-sheets, prepared on June 30th, showed an incorrect state of the financial position. That money was borrowed before witness went to Clerkenwell-road, and as it had nothing to do with the business witness omitted it from the balance-sheets. His present liabilities included one of £143, which he had contracted by taking over a mining account for a friend on the understanding that the latter's wife should take the profit or make good the loss relating to the transactions. The shares went down, the account was closed in July, and witness was let in for £143. He claimed that amount against the friend, but placed no value on the claim. This was his first failure. The following are the principal creditors:—

Re ISRAEL CHINKIN,
Printer and Stationer.

This debtor formerly carried on business as a stationer at 2, The Parade, Stroud-green-road, N. He failed in July with liabilities £590 16s. 11d., and assets "nil." At a sitting for public examination, held before Mr. Registrar Linklater at the London Bankruptcy Court, he stated in reply to Mr. E. Leadam Hough, senior official receiver, that from 1900 till May last he carried on, under the style of Chinkin Bros., the business of tobacconist, newsagent and stationer, at 200, Francis-road, Leyton, but then sold it for £140, which was satisfied by the purchaser retaining £50 then already due to him for cash advanced, assuming liability for a debt of £82, and paying the balance of £8 in cash. From June, 1910, till March, 1911, he had a stationer's business at 2, The Parade, Stroud-green, but then closed it at a loss of £120, and removed the stock to the Francis-road shop. In October, 1912, witness took a workshop at 8, Maryland-point, Leytonstone-road, E., and there commenced business as a printer under the style of the Maryland Printing Co. On May 18th last he was joined by a partner who brought in £25 as capital. That business was still going on, and he (debtor) had an interest in it. He attributed his failure and insolvency to the net profits from the Francis-road business having been insufficient to meet his household and personal expenditure, to losses in connection with the two other businesses, and to interest on loans and bank charges. The sitting was adjourned till October 29th on the application of the official receiver, who required further particulars regarding the Francis-road business.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records. Ed.]

ENGLAND AND WALES.

PARTNERSHIPS DISSOLVED.

HAND, C and C. E, trading as C Hand and Son, at 39, Southwark-park-road, Bermondsey, London, S.E., wholesale newsagents, etc. Debts by C. E. Hand. September 29th.

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help a..d an ornament thereunto."
FRANCIS BACON, Baron Verulam.

"Quads" again, and as I begin writing I am reminded of the various business gatherings, more or less "brief, bright and brotherly" as the "P.S.A." workers would put it which are now being held. For instance, I see the "Optimists" have just been dining at the Hotel Cecil. Mr. C. F. Higham I think was the chairman; he ought to preside on such an occasion, as he has actually started the journal called the *Optimist* to preach the glorious gospel of hope and energy; two words which have almost the same meaning in the business sphere.

o o o

I wonder if it was in its pages I read of things moving so fast nowadays that a man who is protesting that something can't be done is interrupted by someone doing it. By Pegoud flying upside down for instance; or by Lord Northcliffe putting in a plant, as he has been doing now at Manchester and London, for developing the system of illustration by telegraphy.

o o o

Yes, things do change indeed. A hundred years ago we as a nation were pluming ourselves tremendously whenever we spent £100,000 on another 100-gun ship, a "first rate," so called, of about 2,500 tons. They packed the ship's bottom with brown paper, of all unlikely seeming things, to be a buffer medium between the oak and its copper sheathing. (My authority is a book of a technical character, "The Navy in Nelson's Days.") I don't think its much further back to the pre-copper-bottom period; the teredo worm which bored through the oak was then a great optimist: its business was most successful.

o o o

What would Mr. Howard Hazell say was the proper depreciation in those teredo days for a "first rater" like that memorable British ship which was built of oak in 1812, at about the usual hundred thousand cost, and became rotten so swiftly that it had to be put out of commission at the end of a year.

o o o

And now we build a Dreadnought at nearly a two million cost; even though the brown paper is, I believe, no longer supplied.

o o o

We've changed a good deal since. About sixty years ago the first Dellagana's made good money with but crude forms of B. and J. account-keeping in their new electrotyping business; and one of them was even credited by the gossip of the time with winning back from his men week by week through his skill with the dominoes, a good deal of the wages he had paid them.

o o o

That persistent though probably apocryphal yarn suggests that the old boy at least cultivated intimate and friendly relations with his men, and we touch there upon one of the "constants" of business life.

o o o

The modern electrotypers expressing the spirit of change are thoroughly up-to-date and business-like in their accounting methods. They have their modern variant upon any old dominoe-playing in the form of a working agreement as to minimum selling rates between the journeymen and the employers, and this has been so successful and satisfactory all round that the talk at the moment seems to be as to extending it to apply to the journeymen's assistants.

o o o

We have changed our ideas about supervision in some respects since one of the wonderments of printerdom was the way Mr. Killingback would walk down Cassell's press-room with, I presume, a then large battery of litho as well as letterpress machines, and, reaping the harvest of a quiet eye, would see a little thing to put right here, and another there, and have them put right straightway, so that the output was magnificent, and without so far as I ever heard anyone being too hard driven.

o o o

The changed method of to-day relies more on time records and perhaps on automatic registering of the running of the machines. But amid the changes there is the "constant" - the exercise of human care, needed then and needed now.

We have changed ideas since it was declared on Senior's authority, as an economist, that all the profits of a factory were made in the last hour, and the opposition to Lord Ashley's Ten Hours Act of 1847 was largely based on that confident assumption. Printing seems never to have been so prosperous in the United States as now, when the hours have been brought down to forty-eight.

o o o

Amid altering social or personal or physical conditions there remains a "constant"—there remains an ascertainable combination of factors, an ascertainable set of circumstances and conditions which are the most favourable to good output.

o o o

It being of the essence of things that the circumstances and factors and plan shall not be such as rob the future for the present. They must have the seed of permanence in them.

o o o

Some of the most startling things to be said about changes in business have reference to the changes in the commercial standing of business houses themselves. Take a ten years old directory and you will probably be amazed to note how many firms now doing apparently very well were not even listed at all so short a time ago; and how many firms of whose life you might then have taken a long lease are now defunct. Businesses seem nowadays to be soon built up and soon pulled down.

o o o

There is however the "constant," that vitally important "constant," of the physical needs not to say the mental needs of the public. There are so many mouths that someone must supply, so many people with compulsion upon them to be variously purchasing whose "patronage" someone will be securing.

o o o

Those who talk of there being "nothing doing" are really extraordinarily clever people in a way. They manage to forget a whole world, which after all keeps rolling on, forgotten or remembered, and requires something to be done.

o o o

W. S. Gilbert, you may recall, begged the great globe to do that: not to worry itself about his unpaid bills and his various petty bothers, but to "keep rolling on," and the terestrial orb has obliged by so doing ever since. And in rolling on, it provides ever fresh opportunities for enterprise. The good old globe itself is by way of being our best "constant."

o o o

The one thing we may be most disposed to think of as a "constant" is our own personality. Whatever about our business alters we feel that we remain much the same. Whereas we're never the same two days together. We're older than yesterday, and we're either older and bolder or we're older and colder.

o o o

Moses only bought green spectacles at the fair. We are oftentimes much sillier. We wear them. And everything looks wrong to "green-eyed jealousy," or to a man with a grudge against the community.

o o o

I saw a good sketch in a comic journal some years ago. It depicted a curmudgeonly business man, who had finally succeeded in disgusting himself with himself after thoroughly disgusting other people with him. "I'll try the laughter cure," he said. "I'll go to the pantomime, and I'll roar at the knock-about fun just as I used to do when I was a boy."

o o o

The next sketch showed him in the front row with people old and young, but chiefly young, laughing "ever so' all about him. He sat as glum as ever. In fact he had a new grievance now. This, too, had failed. "Why aren't I roaring?" he wanted to know.

o o o

It was simply, my dear sir, because you were not a "constant." Neither was your liver. Neither was your stomach, that organ which is so "deceitful above all things and desperately wicked."

o o o

You were all changing, and when you changed, everything correspondingly changed. Just as ageing huntsmen find the fences are growing bigger.

o o o

Perhaps one of the best ways of avoiding bad personal changing is to put aside the notion that one will put up a grim, hard self-denying fight through ten or fifteen years, and in that time make one's pile, and then begin to enjoy oneself.

o o o

It's better to accept the fact that a pile is not as a rule to be made in ten or fifteen years. Make up your mind to at least twenty years, but promise yourself, as you fairly may, that they shall be rattling good years, good to pass through, good to look back upon - pleasant, or as G. K. Chesterton would prefer to say, "jolly years."

o o o

"Wisdom's ways" have been "ways of pleasantness" before now, and I can't see why they shouldn't be so again.

o o o

The printer Franklin used to say that if he were offered the re-living of his life, even without any power to profit in the second experience by the mistakes of the first, he would accept the offer.

o o o

"Life is more than time," said Ashton Dilke, Sir Charles Dilke's brother. "Life is more than time, and I have lived a great deal." And Morris, an earlier Chesterton in spirit, used to say, "I've had a jolly life."

o o o

The first condition of enjoying one's business is doing what one does thoroughly well with an aim to be the best in the line.

o o o

Was it Stevenson who said, "I have known what pleasure is, for I have done good work."

o o o

The next is to discover that you don't enjoy the pleasure of contemplating your good work any the less, for having secured a good price to correspond.

o o o

Then the conscious exercise of influence over men, the conscious power of persuading, is also a real part of the pleasure to be attained in business.

o o o

Of course the friendships one forms are also a very great part of the enjoyment of successful commerce; but at the moment I am thinking not of externals at all, not of things which may be regarded as some of the compensations for that intrinsically evil thing, the having to give up a large part of one's life to business.

o o o

I am thinking of something quite different —of business life as something which is not intrinsically evil; but which is good and might be thoroughly enjoyed.

o o o

It's a great game. It's fine sport. It abounds with adventure. It has all the zest of conflict It has or may have all the thrill of victory.

o o o

It pays, too, to enjoy it. "No profit grows where is no pleasure ta'en."

o o o

"When I've gone in to see anyone about getting an appointment," a business woman once said to me, "it's never occurred to me that I was going to fail." And apparently she never did fail.

o o o

Of course one must have an aim, and a pretty definite aim, if one is to get the keenest enjoyment out of business.

o o o

Perhaps it might be put in this way, that the business man should have one master aim and a lot of lesser aims. The lesser, being in no way divergent from the greater. Their attainment should be all the time contributory to the compassing of the main object.

o o o

One must have an aim, or aims; and the main aim must be related to oneself.

o o o

You can't enthuse, for instance, over the earning of £300 to pay debts of £300. You can do it as a duty. You can't enthuse over it.

o o o

But you can enthuse over the earning of £400 to pay £300 debts and to give you the odd £100 for yourself! That is to say you can enthuse over the odd £100. It would be rank hypocrisy to pretend to be equally excited about the larger part you have to pay away.

o o o

And I am talking now of enjoyment. Enjoyment and hypocrisy don't accord together. "No man," said old Johnson, "is a hypocrite in his pleasures."

o o o

I believe these ideas are worth developing. I should very much appreciate it if anyone to whom the notions, or some of the notions I have tried to embody, made some appeal, would send me a line and perhaps give me an inkling of ideas of his own upon the matter.

ONE WEEK'S OUTPUT OF STEREO METAL.

Three recent Letters following VALUATIONS of Printing Plant by FRANK COLEBROOK, Printers', Newspapers' and Plate Makers' Valuer, 146, Fleet Street, E C. (Phone Holborn 2288).

An important northern provincial firm writes: Herewith cheque with compliments and thanks; it only remains for us to add how thoroughly satisfied we are with the way you have completed the work.

An Irish printer writes: I was greatly struck with the very thorough and business-like way in which you went about the work; giving my staff so little trouble and not interfering with the routine of the office. Had I anticipated that the valuation could have been made with such expedition and exactness and under such pleasant conditions I would have availed myself of your services long ago. (August, 1913.)

A South of England printer writes: Enclosed is cheque. We have pleasure in testifying to the promptitude and care with which you carried out our valuation of plant and to thank you for doing so without cessation of work. (August, 1913)

And this *re* a fire settlement from a London firm: Now that the Fire Office has settled my claim I have to thank you for your prompt and untiring attention, which has secured such a satisfactory result.

About the Rubber Blanket.

One of the most vital auxiliaries of the offset press is the rubber blanket. Of course, it is impossible to print at all in the offset manner without a rubber blanket, and the better the blanket is the better the printing will be. The careful offset pressman pays particular attention to his blanket. Neglect or faulty treatment of a blanket soon causes it to deteriorate, and even with the best of care it often happens that the blanket goes wrong after a very short period of use. Every pressman has had the experience of taking two blankets off the same piece and having one of them run for a long time and the other, with apparently the same treatment, going to pieces in a very short time.

It always has been and probably always will be in the nature of a lottery to buy rubber blankets. No man can tell whether a certain blanket is due for a long or a short life on the press, and the one that looks the best in the beginning is often the one that gives up the ghost first.

There are many defects in rubber blankets that reveal theniselves at one time or another, and it is best for the offset pressman to familiarise himself with some of the details of the manufacture of rubber blankets so that he may be able to give the ones he uses the best treatment possible.

The blanket generally used on an offset press is composed of three layers of specially woven and stretched fabric interlaid with three uniform layers of rubber film. The cloth, before being fit for blanket making, has to undergo special rolling and stretching operations. Not only is this stretching done in one direction—the long way of the cloth—but also just as severely in the other. The operation is repeated until there is no stretch apparent. If this stretching is omitted or is not done thoroughly, the blanket will stretch so that it is practically worthless.

The rubber layer which is applied to the fabric is in a liquid state when it is applied, and sometimes three or four coatings are applied and allowed to cure and dry before the layer is judged to be complete and the next layer of fabric is put on. Thus it is that sometimes two blankets cut from the same piece will vary, because it is possible that the part of the roll that receives the rubber coating first is dryer and harder when the fabric is put on the other end of the roll, and will, therefore, show a different consistency. That which is not allowed to dry thoroughly will be found to be soft and tacky. If it were possible to apply the rubber coating to the fabric instantly over the entire surface, the blankets would be all alike practically.

In cleaning a blanket the utmost care should be used not to employ a substance that will have a bad effect either upon the rubber or the fabric used. Such substances as benzine or benzole, although they will remove greasy ink most effectively, also dissolve the rubber, and by a constant application will soon destroy the "life" of the blanket. One of the very best cleansers for rubber blankets so far produced is coal tar naphtha in a rectified state. This is used very extensively by manufacturers of rubber goods, and is a harmless yet available fluid. It has the least injurious effect upon the rubber of any cleanser so far introduced.

After the blanket has been washed it should be powdered with French chalk, which should be applied with a soft flannel cloth and afterwards gone over gently with a linen cloth. If the blanket is inclined to be tacky, a little flour of sulphur used before the chalk is applied will help the surface, but too much sulphur should never be used.—*Harris Monthly.*

American Imports of Printings.

The following figures show the imports of printing paper into the United States during July from the countries mentioned :—

	Pounds.	Dols.
Austria-Hungary ...	2,679	362
Belgium	34,119	1,212
Germany	15,455	908
Italy	2,630	377
Netherlands	159,025	7,399
Norway...	244,663	7,810
Sweden...	23,917	897
England	143,765	6,851
Scotland	13,276	723
Canada	32,318,113	627,792
Totals	32,957,640	654,331

The "Thermofeed" Regulator.

Anything new to facilitate or economise the working of steam raising plant is always welcomed by owners of boilers in printing factories. Therefore, a good deal of interest is attached to the "Thermofeed" regulator or controller, which is one of the patents in which Messrs. Ronald Trist and Co., Ltd., Coronation House, 4, Lloyd's-avenue, London, are interested. It is claimed for the "Thermofeed" regulator that it entirely controls the water level whatever the requirements for steam may be, no matter how sudden or varied the demand; the firing of the boiler is determined solely by the steam required to be produced. No tampering with the water level, with its train of costly consequences, is required, except, perhaps, where specially heavy and sudden alterations in the load occur. The "Thermofeed" is an ingenious invention and well worthy of consideration by steam users. As a result of trials under the severest conditions, Messrs. Ronald Trist and Co., Ltd., have obtained clients for their machines all over the kingdom, many of whom have from 20 to 50 in use. They issue an excellent booklet describing the "Thermofeed," which, by the way, is British designed and British made.

The Australian Market.

British Paper Shipments During the last Five Years.

The total shipments of British paper to Australia during 1912 and four preceding years were as under:—

1912 ...	710,276 cwts.	£711,135
1911 ...	654,203 ,,	650,453
1910 ...	632,366 ,,	621,426
1909 ...	507,836 ,,	515,409
1908 ...	454,688 ,,	470,629

The following values show the distribution of the exports to Australia :—

	1908.	1912.
Victoria	194,894	£295,425
New South Wales	168,058	257,877
South Australia ...	45,500	65,441
Queensland ...	34,063	46,358
Western Australia	31,049	37,909
Tasmania ...	7,251	8,125

In AMERICA

There is published only one weekly paper representative of the interests of employing printers. It is the most popular Printers' Paper read in that country:—

Because it is the Trade Business Journal.
Because it has a splendid news service, with twenty-two paid correspondents.
Because it deals with the practical always.
It is the only Paper which holds the attention of the man who owns the plant.
The PRINTING TRADE NEWS does not attempt to teach printers to set type, but it is the foremost authority on the latest efficiency methods, the organization activities, progress in cost system work, approved methods of printers' advertising and anything and everything that tends to make the printing business a pleasant and profitable one.

It is pre-eminently the trade journal English machine builders should use to make their product known in America.

We have good mechanics. Let us have good business men. Let the **NEWS** come to **YOU** every week. Europe **$5.00** per year; Canada **$3.00**. 64 pages weekly.

Standard Papers.

The Percentage of Ash.

When introducing standard papers definite limits for the percentage of ash were fixed, as is known, for the better kinds. At the instigation of the Royal Testing Office in the year 1904 the limit of the percentage of ash was abolished; afterwards, however, some doubts were raised, it being feared that the percentage of loading material in standard papers would now rise very considerably, and that the quality of the papers might decline. This was not to be expected, says the *Papier-Fabrikant*, for the following reasons: Firstly, the margin formerly allowed for the percentage of ash in standard papers had not nearly been utilised completely by the trade, and therefore it was not to be expected that more loading material than formerly would be used when the limits were done away with. But even if this were to occur an unfavourable influence on standard papers would not be exercised for the following second reason. The more loading material is added to the paper the less does its strength become. The admixture of loading material cannot therefore exceed certain limits when the prescribed strength is to be obtained. When the attempt was made, however, to employ more loading material stronger raw materials would simultaneously have to be employed in order to obtain the required strength, and then of course a better paper would be produced than before. Of two papers having otherwise equal properties, particularly equal strength, of which the one contains loading material and the other none, the former is to be preferred, because it can be manufactured only by employing better fibrous materials and by a better manufacturing process.

In order to determine to what extent the percentage of ash of standard papers has changed since the limits for the percentage of ash were dropped (1904), a large amount of paper which had been examined in the years 1906, 1907 and 1911 was tested subsequently again as to the percentage of ash, and the values obtained were compared with those obtained in the years 1901 and 1902, when the regulations as to the percentage of ash were in force. It was found that various mills had carried the percentage of ash considerably beyond the limits formerly prescribed. These cases are, however, the exception, and the average values of all the determinations show that on an average, after the removal of the limits, no appreciably larger quantities of loading materials were employed for standard paper than formerly. In spite of the partially greater loading, all these papers possess the prescribed properties as to strength.

The results obtained by the above investigations may be summarised as follows:—

(1) The margin allowed until the year 1904 for the percentage of ash of loaded standard papers (3a—4b) has not on an average nearly been used by papermakers.

(2) Four years after the limits for ash were abolished standard papers had on an average a higher percentage of ash than before. In no class, however, did the average values reach or exceed the former limits.

(3) Tests after four more years showed approximately the same results.

(4) The papers of classes 1—2b, for which the admixture of loading materials was forbidden being 1904, have been made with an admixture of loading material only in individual cases after the removal of this prohibition.

The fear mentioned above that the removal of the limits for ash would act unfavourably on the quality of standard papers can therefore now be considered without foundation. Taking everything into account the conditions since the removal of the limits have not become appreciably different from what they were before.

A FEATURE of the October issue of *Pearson's Magazine* is the return of "Pollyooly," that delightful "flapper" who ranks among the most popular of Mr. Edgar Jepson's creations. "Pollyooly Plays Her Favourite Part" is a most diverting and characteristic story, and there are more episodes in this young woman's adventurous career to come. Miss Phyllis Neilson-Terry and Mr. Laurence Irving form the subject of an entertaining and well-illustrated interview. Mr. Harold Hilton, the famous golfer, contributes an article on golf and character. Mr. Philip O'Farrell continues his "Notions of a Nut," aided and abetted by Mr. Lewis Baumer's witty drawings; "Weddings" is the subject of this month's instalment. "Dramatic Death Scenes" is finely illustrated with reproductions of famous pictures of such historical events as the execution of King Charles I. and the death of Queen Elizabeth; and a fascinating nature study is the picture article on the leaf rolling weevil.

Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be endorsed "PATENT DEPARTMENT," Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C. Telegrams: Stonhill, Fleet, London.

Applications.

21,336 McKENZIE, W. P., lithographic printing, stamping, and other like machines.
21,449 LEHFELDT, A. M., cash, stamp, parcel or the like tray for advertising purposes.
21,455 WICK, H. and T., process for the production of lithographic printing plates photographically.
21,474 MOLE, A. E., mechanical stamp licker.
21,490 GAUNT, C. F., paper weights.
21,517 MORTON, T. W., luggage labels and the like.
21,518 HURT, H., and BRAND, F., advertising signs and the like.
21,575 APPEL, G., paper folding and cutting machines.
21,704 HASLAM, W. H., book holders.
21,721 WALKER, W., price ticket and miniature show card.
21,726 NESBITT, G. C., pin-hole camera and magic paper, card celluloid, or other suitable material.
21,734 HILL, J. M., letter-holding clip.
21,775 COGSWELL, A. G., stamp or label affixing machines.

SOME CONTRIBUTIONS TO

Scottish Paper Trade History.

XI.—The Esk Mills of Messrs. James Brown and Co, Ltd.

Amongst the paper factories started in Scotland towards the close of the eighteenth century was Esk Mill, Penicuik. It was built by Peter Brotherstone about 1775, and was then said to possess one of the most powerful water wheels in the neighbourhood, as the fall of water was 27 feet. Soon after the above date Messrs. Haig and White became associated with the business, which developed rapidly into a most flourishing concern, combining papermaking with cotton spinning. The paper produced seems to have made a name for itself all over the country, but soon after the beginning of the nineteenth century, trade, owing to the foreign wars, began to languish, so that in 1811 the proprietors were apparently very glad to lease the property to the Government, to be used as a prison for captured French soldiers, many of whom were at the same time interned in Messrs. Cowans' mill about a mile away, as mentioned in the third article of this series. The structure now used as the Finishing department was apparently erected about this time, and is remarkable for its very thick walls.

Shortly after the declaration of peace in 1815, Mr. James Brown took over the mills, and in association with Messrs. Blackie (of Glasgow), Fullarton and Somerville, continued to carry it on until the year 1820, when this combination came to an end, and Mr. Brown conducted the business thereafter on his own account. In 1825 the mill (then numbered 23) contained four vats, but by 1832 they had been replaced by a couple of machines, which ran on writings and printings. Mr. Brown also installed steam engines, so as not to be entirely dependent on water power. He then lived close by his mill, but went on Tuesdays to Edinburgh, where he had a paper warehouse in Blair-street. By this time the Excise authorities had affixed the present number, 31, to the entry of Esk Mill on their books. Previously it had been that of the one-vat "Blackburn" mill in the Linlithgow district, worked by Adam Manson and Co., and presumably closed in the late twenties. In 1836 the machines at Esk Mill worked 12 hours a day—occasionally through the night as well—and made paper 54 inches wide at the rate of 30 feet per minute. The machine of that day only required the attendance of a man and two lads, who produced as much paper by its means as did 30 hands by the old vat process. In the summer of 1839 a new machine was put in, and the business steadily increased under the careful supervision of the proprietor and his son-in-law, Mr. Thomas McDougal, a London merchant, who ultimately came down to assist him at the mill, and by his wide knowledge of commerce, and business acumen, extended the connection very largely, more especially in the London market.

Mr. Brown seems to have been of a mechanical turn of mind. As early as 1826 he took out a Scotch patent for some "Improvements in Papermaking," and a few years later turned his attention to suction apparatus, as applied to the papermaking machine.

Although the Fourdriniers so greatly improved the original primitive appliance of Robert, that it has ever since borne their name, they did not introduce any suction plant, the water from the pulp simply draining away through the wire. Dickinson, however, in 1809, invented the first suction pump for papermakers, and though his rival to the Fourdrinier machine was a failure, its suction apparatus came in useful, and was soon adopted, especially for the cylinder type of machine, invented by Bramah as early as 1805, and improved by Hall in 1830. Mr. Brown appears to have been possessed, rightly or wrongly, with the idea that suction pumps were not generally used on papermaking machines. Hence, in the early part of 1836, he patented in Scotland (and immediately afterwards in England also) the application of such apparatus to the Fourdrinier machine. He can scarcely have been unaware of the fact that it had been in use in this connection for many years past in England—if not in Scotland—but nevertheless there seems to have been no opposition to the grant of his patents. Some time afterwards it came to his knowledge that Mr. Annandale, of Polton, had purchased a set of suction pumps from an English engineering firm, and attached them to a Fourdrinier machine in his mill. Mr. Brown considered this to be an infringement of his Scotch patent, and therefore promptly invited Mr. Annandale to recognise his alleged rights in the matter. That gentleman declined, on the ground that an appliance long in use in England could not be legally patented in Scotland as a new invention. Mr. Brown, however, persisted in his claim, his contention being that in Scottish law England was still a foreign country, the Act of Union notwithstanding, and as Mr. Annandale still remained obdurate, an action was commenced against him in the Edinburgh Court of Session in the early part of 1840, Mr. Brown claiming £1,000 damages. The law's delays were such that the case did not come on for hearing until July, 1841. Several papermakers attended to give evidence, but after the late Mr. James Jardine, C.E., had been examined the action was dismissed with costs by Lord Mackenzie on the ground that there was no case. Mr. Brown was not satisfied with this barren result, and therefore decided to appeal to the House of Lords. He acted with such promptitude that the case was actually mentioned there in the course of the following month, but was ultimately held over until the next session. It was heard on February 24th and 25th, 1842, when a verdict was once more given against Mr. Brown. The "Reminiscences" of the late Charles Cowan, M.P., contain some allusions to this once celebrated case. When Mr. Brown came up to London to attend his Appeal, he reached the House of Lords at the time when their Lordships were at prayers, so that the doorkeepers refused to admit him. He thereupon implored them to let him in, saying that if ever there was a suitor that needed their Lordships' prayers more than another, he was that person. When he at last procured admission, he had the rather unusual experience of hearing the Lord Chancellor (John Singleton Copley, Baron Lyndhurst) deliver an opinion on the validity of the patent diametrically opposed to one that he had given some years before, in the capacity of advisory counsel, and on the faith of which Mr. Brown had acted. Mr. Brown, though seriously victimised, evinced no disappointment or irritation, but laughed heartily at the ludicrous fix to which he had been brought by the contradictory judgment pronounced by the high legal oracle.

Some thirty years later (1871) the firm were in the position of defendants in a patent infringement case. In the early part of 1869 a chemist named Seitz, then at Bridge Hall Mills, had patented a soda recovery process, to which we shall have occasion to refer later. Not long before, he had brought his process to the notice of Messrs. Brown and Co., and they ultimately made an agreement with him that if they approved of his systems after inspection of them in operation at Chirnside Mills, they would adopt his process. Messrs. Brown visited Chirnside Mill in January, 1869, to see his processes, but did not consider that they possessed any superiority over their own systems. In consequence they told Mr. Seitz "that they did not see anything really new, and that they could not think of going into the thing," but unfortunately this was not put in writing in an official letter from the firm. At that period—following upon a famous law case which we shall deal with in a future article—all the mills on the North Esk were under the rigid supervision of an eminent chemical engineer, the late William Arnot, F.C.S., whose business it was, under a Court of Session Agreement, to instruct mill owners what remedial measures to adopt, to assist in devising improvements, new systems and plant, and to supervise the working of the whole, to prevent pollution of the river. In March, 1871, Mr. Arnot insisted upon additional roaster power being erected at Esk Mills, owing to more esparto being boiled there, and a new roaster was accordingly put in to his own design and satisfaction, which naturally embodied all the improvements that he could from his experience recommend. Immediately after this roaster was set to work in the autumn of 1871, Mr. Seitz claimed damages from Messrs. Brown and Co. because some details in this new apparatus (height in inches, etc.) gave it a certain amount of resemblance to some of the features of his roaster which Messrs. Brown had seen in operation at Chirnside 2½ years before, and the Court of Session—because of the very comprehensive wording of that old agreement just alluded, to which had never been cancelled officially in writing—gave a verdict in Seitz's favour for a sum of £905.

This case caused a great deal of interest in the papermaking world at the time, because of the hardship involved by the judgment, which apparently prevented manufacturers adopting any new designs in engineering plant which might happen to possess some detail, however trifling, that had been mentioned in a vague agreement made years before with some other engineer. Subsequently Messrs. Brown and Co. became interested in a process patented by a Bonnyrigg engineer named John Young, in September, 1873, according to which the soda lyes in esparto grass, etc., were pressed out after the boiling by rollers, which split up the material without breaking it. This apparatus was duly installed at Esk mills.

After Mr. Brown's death in 1852, Mr. McDougal became proprietor, and, assisted by his sons, carried on the business, greatly developing it until his death in 1871, when his two sons, Edward and Thomas, succeeded him as proprietors of the concern.

The business was formed into a public limited liability company in 1898, the year of the death of Mr. Thomas McDougal, junr., but his son and nephew continue the family interest in the business, and are directors of the company, which still maintains that excellent connection in the London market which was initiated by Mr. Thomas McDougal, senr., 60 years ago, although as much paper is now produced at Esk mills in one day as was turned out in a week at that period. The three machines of the sixties had increased to four by the late eighties, and there are now five, making respectively 56-in., 60-in., 74-in., 82-in., and 92-in. of finished paper. The mill turns out about 200 tons per week of super-calendered, litho, map and copy book papers, E.S. writings, envelope and coated papers, some 450 hands being employed. During the greater part of the 70 years existence of *Chambers Journal* the paper on which it is printed has been made at Esk Mill. Paper is also supplied for many art magazines of the very highest class, and for school books and copy-books, for which there is an ever-increasing demand. For the last half-dozen years or so the firm have had a London office, which is now located at 3, Tudor-street, E.C., and is under the care of one of the directors of the Company, an arrangement which ensures to the many London customers prompt and personal attention to all enquiries.

The Board Room at the Mill, besides possessing portraits of Mr. James Brown and his successors in the business, is adorned with those of some of the old-time employees, several of whom were at work until well over three-score and ten; the oldest at present has a record of sixty two years' service since he first began work under old James Brown. The present managing director and chairman, Mr. John Jardine, joined the company in 1872, was taken into partnership about twenty-five years ago, and together with his sons now carries on the management of the business.

A very interesting account of the "Romance of a Sheet of Writing Paper" was published in the October, 1912, number of *Chambers Journal*, and contains several references to the paper factories in the valley of the North Esk, in which "Esk Mills" are situated. The site is practically a deep hollow close to the stream, and on the opposite bank the ground rises very abruptly to an elevation of some 200 feet. The fine springs along the course of the Esk may have originally drawn the papermakers to this valley, from whence they now send all kinds of writing and printing paper over the civilised world. Could we trace the after-history of much of the paper manufactured here we might find it associated with poetry, romance, and tragedy, as well as utility, says the writer in *Chambers Journal*. There is much charm and quiet beauty, with historical and literary interest, in the higher reaches of the North Esk, which after it leaves its reservoir in the Pentlands, passes along a fine Highland-like valley, tumbles over two waterfalls behind the village of Carlops, and for a time forms a boundary between Peeblesshire and Midlothian. After a course of seventeen miles it joins the South Esk below Dalkeith Palace, and enters the sea at Musselburgh. Besides a carpet works and a gunpowder factory, there are seven paper mills on this little river. A century or more ago, it was customary for the paper manufacturers in the Esk Valley to give a "mill dance" every Christmas, a practice which has long since been abandoned, the annual summer excursion having taken the place of the Yuletide revels.

THE October *Windsor Magazine* offers its readers an entertaining new story, complete in the one number, by S. Macnaughtan, the author of "The Fortune of Christina Macnab," "A Lame Dog's Diary," and other successful books. Edgar Wallace contributes a new story about the irrepressible Carfew. The principal serial attraction, Gertrude Page's novel of Rhodesian life, entitled, "The Pathway," reaches a stage of great interest, and, in lighter vein, the series by Albert Kinross chronicling the adventures in England of the charming American girl, Virginia Bright, is continued with another genial episode. Charles G. D. Roberts is represented by a study of Wild Life, and J. E. Raphael contributes an interesting survey of "The Development of Rugby Football." The fine art feature consists of a further group of modern pictures inspired by themes from the Bible story, with which is presented a finely printed coloured plate from Henry Ryland's poetical rendering of Ruth. The whole number is admirably illustrated.

Can I Adopt Machine Composition with Economy?

Oftentimes the Printer purchases a composing machine without being SURE that it will set the many and varied jobs passing through the house—and then when he finds it will *not* set the very work for which he bought it he says machine composition is not economical: because the idle hours have to be charged to the producing hours.

The Cost of Investigation is Nil

The MONOTYPE MACHINE does perform all that we say it will, which includes all the work done by other composing machines plus the work they *cannot* do

THE WORK THEY CANNOT DO is the work you may need to do, therefore

It is Costly for You to Experiment

We have done the experimenting for the Printer, who secures the beneficial results

Demonstrations can always be arranged

Account Book Sewing.

By HARRY A. MADDOX.

Nothing is more noticeable in stationery bookbinding than the deterioration in durability of the work turned out now, as compared with the standard of fifteen to twenty years ago. There are still a few houses able to execute account book binding of a very high order, but in general the standard of craftsmanship is low. The main causes for this lowering of standard are, the customer's demand for cheapness, and the employer's demand for speed to fulfil the former requirement. The best binders of two decades back were consistently accustomed to handling large ledgers and journals on handmade paper, full bound in genuine leathers, often with double overbands and vellum laced. At the present time the men who can efficiently accomplish such work are rather rare, and the ordinary binder takes a risk on anything above half-bound work. The fault however is not the workman's, for in most houses full bound work of a high grade is rarely seen, and where it does come round is handed out to the solitary individual who in earlier years received his training amongst work of that character.

However, our object at present is not to discuss the merits of full binding, though this may come up later; our chief concern here is account book sewing. The reasons which have been put forward for the deterioration of the actual binding apply with equal force to modern book sewing.

Customers are keen on cutting down their stationery bills, hence they reduce the quality of their paper and request a cheaper binding, coincident with which they usually raid the trade for quotes. Keen competition demands modern methods and up-to-date machinery to cope with it. In the case of book sewing, mechanical operations have very largely superseded or supplemented handwork. The machines are now an absolute necessity to the bookbinding house with any pretensions to up-to-dateness. Their speed and efficiency on suitable work makes it possible for the account book binder to execute large orders within time limits at a profit to himself.

The points for consideration are: does the binder place any limit to the efficiency of machine book sewing, and is the standard of so-called high grade work what it should be? Take the sewing of an account book before the days of the machine, noting carefully the materials and methods employed to create the maximum of neatness, strength, flexibility and efficiency in the work. The highest quality of very stout linen thread was used, along with broad, unbleached stiffened linen webbing. In most cases vellum strips rode upon the latter to give additional power. Speed was sacrificed to impart strength and perfect regularity in the sewing. Careful attention was bestowed upon the kettle-stitches, which were correctly recognised as holding the master key to the situation.

Of almost equal importance to the kettle-stitch are the end papers. Hand-made paper was a commodity common to all binders years ago, and—as now—the mill reams were accompanied by outside sheets, 40 to the ream. These were used on all good books as the ends, hence the foundation was a substantial and strong one. To form the joint, leather, unbleached linen or strong holland was used, according to the character of the account book. In many cases, every section of the book was lined with linen, and where the inner sections were unlined, due care was taken to strengthen at least the first and last sections in this manner. The ends were sewn to the books with coloured macramé cord, thereby adding strength and decoration to the book.

Five bands to a book was the usual practice, but on large folios no attempt was made to save time by following any hard rule in numbers.

The result of this procedure was to produce a sewn book which was solid as a rock, yet perfectly flexible. The leather might go, the paper fade and become brittle, but such sewing held for years upon years in constant use.

Reviewing the modern standard of hand-sewing, save for the work of the few really good houses, a vastly different class of routine and material now prevails. On each of the points above described the increased demand for account books at lower prices has created a lowering of quality in workmanship and material. Thinner and cheaper thread is selected; fewer bands of a narrower width and cheaper quality are used, vellum riders are a rarity, and stronger cord in the ends is deemed a waste of time. Some few houses of repute strengthen the sections of their good class work by lining up with calico or linen, but the majority of ordinary binders only perform this operation under special request.

Fortunately, as we have maintained throughout, there are some houses which know how to preserve the book-sewing traditions of the past, but they are distinctly in the minority.

There is nowadays a great deal of account book work turned out which does not particularly require the high degree of strength and durability shown by hand-sewn work. This class of work forms the especial province of the various book-sewing machines in vogue. As we have before indicated, the particular binder must set a limit upon the books which are to be sewn upon the machines. Comparisons are odious, but it is very necessary here to devote some consideration to the question of machine-sewing *versus* hand-sewing.

In neatness of appearance after sewing, books done on the machine are quite equal to the best handwork, except for a tendency to show too large a needle hole, an obvious fault in view of the fact that the glue may afterwards ooze through to the centre inside the sections. As a matter of fact this is a characteristic fault of one style of machine-sewing. The machine-sewn book has never yet attained the solidity of hand-sewn work. If the tapes are sewn through, there is a danger of the back sagging somewhat, owing to insufficient pressure upon the individual sections during sewing. On the other hand, sewing over tapes on machine leaves the tapes with too much play. A good hand-sewn book is firm as a rock before glueing up, but the ordinary machine-sewn book is unstable, and apt to wobble considerably. Hand-sewing is performed with a continuous thread and the stitches run through the book from head to tail and tail to head without a break. With the exception of one type, all book-sewing machines perform their work with independent threads for each stitch. The larger the number of tapes and stitches carried, the more numerous is the supply of separate reels of thread required. Machine book-sewing is usually carried out with doubled thread, hence additional strength is secured, at slightly increased cost, of course.

Much stress was earlier laid upon the importance of the kettle-stitch. No machine is ever likely to attain the efficiency of a hand-worker in accomplishing the operation of introducing this strength factor into the sewing of a book. The construction of a kettle-stitch is a matter which the handworker regulates at will. Varying degrees of strength and security are imparted to it according to the particular requirements of the work in hand. The so-called kettle-stitch of the machines is in reality a chain-stitch, and does not exert anything approaching the same strengthening effect as the true kettle-stitch. If by chance a thread breaks in a hand-sewn book, the trouble is limited to the particular section in which the broken thread is located. Should the thread of a machine-sewn book break, its effects extend gradually from the first to the last section. It is a comparatively easy matter to draw out from a machine-sewn book the continuous length of thread forming any particular stitch throughout the book. In the case of very thick books, which are subject to a lot of rough usage, it frequently happens that the thread gives and works itself out right along the back. The hanging threads become longer and longer, until they are pulled out by someone for curiosity. Such happenings do not occur on hand-sewn books.

Another important limitation in machine sewing is the positioning of the bands and chain-stitches. If a change is made on certain fast back work from hand-sewn to machine, it is often a difficulty that the panels of the last pattern cannot be matched. It occasionally happens that a client is extremely particular to obtain all his letterings of old and new account books in perfect alignment. Customers prefer hand-sewing on good work, and it is a difficult matter to obtain permission to change the position of lettering in order to accommodate the book-sewing machines. It is important to observe, however, that between the machines themselves there is a considerable difference as to the range of play afforded, one machine in particular being specially inflexible.

In spite of the loss by comparison, however, machine book sewing is probably the most valuable aid to production which has ever been devised for the account book binder. If its use is doubtful on high class and very heavy work, there can be no question as to its efficiency on the common run of quarter, half bound and miscellaneous stationery work turned out daily by the commercial house. The large quantities of contract work handled by many houses have made hand-sewing practically an impossible consideration. It is very doubtful if there would be sufficient hand labour to accomplish it. The essential factor however is for the book-binder to define carefully which of his work is suitable for the book sewing machine and which must be sewn by hand. The best class full bound account books, which are required for constant and prolonged use, should certainly not be sewn on the machine, nor should any good half-bound book above three hundred and fifty leaves in thickness. If the customer cuts down the price so low

Digitized by Google

that the job will not stand the cost of hand-sewing, machine work should be specified on the tender.

Books which are short lived, and not required afterwards for constant reference, are suitable if sewn on the machine. It must not be forgotten that the machines will sew through sections lined with linen. Hence in certain cases additional strength may be imparted to machine-sewn work by lining up either the first and last sections or all the lot; added strength is also secured by paste tipping the sections. To keep the standard of account book sewing by machine as high as possible, thoroughly trained operators are essential; a girl who understands the machine and the class of work will turn out a vastly superior style of sewing to that accomplished on the same machine by an incompetent hand. The thread used should be as stout and strong as possible and must be free from twists and flaws, which cause frequent breakages and stops, besides weakening the sewing. A little extra outlay on thread is an investment which lifts the efficiency of the work. Only the best tape should be used, and its width requires to be exactly correct, or trouble may ensue. If the needles make unnecessarily large holes, the backs of the sections should be rubbed over with a folder before glueing up. The book sewing machines now on the market are marvellous time savers, and a little attention to details of additional strength in the sewing of account books is nothing compared to the difference between the time taken to sew a book on machine against one sewn by hand.

A New Mechanical Method

APPLICABLE TO

Lithography in all its Forms.

By Mr. A. H. Motley.

A Lecture and Discussion before Members of the Printers' Managers and Overseers Association.

One of the best attended meetings of the Printers' Managers and Overseers Association (Parent Body) was held at the Old Bell, Holborn, E.C., on Tuesday evening, 7th inst., when an instructive lecture entitled "The Newest Mechanical Method Applicable to Lithography in all its Forms" was given by Mr. A. H. Motley, followed by an interesting discussion. The President (Mr. C. J. Gray) was in the chair, and previous to the lecture some preliminary business was transacted.

Mr. A. H. Harvey (*Pall Mall Gazette*—machine) having been duly elected to membership, the Chairman stated that the Council had had under consideration the suggested general meeting of the Association in London next year. They intended to make it a united meeting for the whole of the Centres, but they thought they should have the authority of a general meeting of the members. He therefore proposed this resolution: "That the Council be authorised to make arrangements for the celebration of the 21st anniversary of the establishment of the Association by the holding of a united gathering at the next exhibition." The Association attains its twenty-first anniversary in May next year.

The motion was seconded by Mr. W. Hermon Gill and carried.

In introducing the lecturer, the Chairman said that although of primary interest to their lithographic members, the lecture was also applicable to the whole of the printing art, and he was sure they would hear something from Mr. Motley they had never heard before. He was pleased to see the litho members had turned up in such large numbers, and also that a return to a technical lecture had attracted so large a gathering.

Mr. Motley's paper was as follows:—Mr. Chairman and Gentlemen,—As managing director of the Printex Co., Ltd., of Great Britain, with offices and plant located at Central House, Kingsway, it gives me much pleasure to accede to your kind invitation to be with you to-night for the purpose of extending to you my best efforts in laying before you, at least a faint descriptive insight of the Printex Process, which we believe to be most remarkable, accompanied with some interesting particulars of the many potent results which it has already attained in practically every section of the printorial craft, with which all you gentlemen are so intimately identified.

The Dominant Features.

I will endeavour first to concisely focus the salient attainments and dominant features with which this process is endowed, as it will then enable you to better grasp each phase of its application without my repetition.

Briefly we produce by our process *perfect and complete productive printing surfaces*, faithfully duplicated from one original, and which are available for *every range of printing methods*:—"Planographic" or "flat surface," as represented by lithography—"relief," as represented by typography—"photo-engraving intaglio," as represented by photogravure, and rollers for the printing of cloths. This we accomplish in infinitely less time, with better results and at considerably less cost, than can be done by any of the older methods, which this process is, in our opinion, destined to displace.

It is done by patented automatic machinery, which in every detail forms a unique and correct combination and economic utilisation of the special mechanical and photographic appliances, such as a step and repeat machine, rotary machine, ingeniously devised to quicken and perfect certain essential and indispensable requirements of the printing trade.

Let us take first, lithography, for example: This process appertains to the transferring, in which we supplant the necessarily slow and erring human element, with an automatic substitute of mechanical precision, possessing a tireless willing energy, and always ready for work, and at all times producing perfect transfers for machine printing purposes, infinitely superior in every respect to what can be done by the older manual rule or hand methods heretofore in vogue. The more complicated, extensive and intricate the lithographic printing images may seem, the more speedy and remarkably economic our process proves to be.

Each Unit an Original.

Each unit of a sheet of transfers is an original, and therefore identical with the original, and there is no thickening as in transferring by hand, nor is there any attenuation of the images: all are sharp and equal in strength, so that practically every image on the printing surfaces which we prepare is equivalent to printing from the original image. A sheet of transfers which will take the lithographic transferrer eight hours to produce upon a machine plate, we can produce in 2½ hours, and a similar proportion of time saving on other work, all of which would be of the highest standard attainable.

No atmospheric or weather conditions affect the result: this therefore means that the same high-class quality is attainable in either summer or winter, hot or cold, wet or dry.

Unreliable transfer paper, which is generally prevalent, is entirely dispensed with by our method; the same applies to transfer ink, neither being required by our method. Again, under present-day methods, if a machine plate should become spoilt and another one is necessary, it would take the transferer as long to produce this second sheet by his present lithographic means, as it did to produce the first one: this applies equally to plates that may have required three, four, five, six or even ten hours to produce. By our method, a record is retained, and once the plate has been made we can reproduce it again, without any loss in sharpness, in one or two hours, the time varying according to the size of the plate required. For example, if we have once produced a plate 30 by 40 with 500 images thereon, we could produce this plate again, identically with the first, in 45 to 60 minutes and at a cost not exceeding 2s., and we guarantee that this duplicate plate will be in perfect register with the first one made, and will register accurately in any number of colours.

Saving in Storage.

Where our method is employed there is no need to store and retain the large stocks of heavy, expensive stones, or of less expensive aluminium or zinc plates.

In working out this process, we have considered the great question of reducing the expense, and shortening the time, and also to remedy the trouble that practically every printer is annoyed with, *i.e.*, that of storing away stones and plates, fearing to remove the design and use these plates or stones for another job, realising the cost that would be necessary to reproduce them.

We think you will agree with us that the only way to make money out of machinery, plates or stones, is to keep them going and always busy. Our method enables you to do with 50 stones or 50 plates the same volume of work for which you would require 250 stones or 250 plates to do an equal amount of work. We can safely assert that any work transferred by our method will yield far greater results and more runs than can be gotten otherwise. This fact has been demonstrated in numerous cases; in one particular instance, with perhaps your largest lithographic plant in Great Britain, on a certain job by their hand transfer plates their best run was from 40,000 to 60,000. By our method of transferring the same job, 150,000 runs have been gotten, every one of which were entirely satisfactory, and the company informed us by letter that the plates were still good for further editions.

For the Letterpress Printer

quite as satisfactory results can be obtained. We can duplicate, place on roller relief or intaglio or plates, type or any line work or half-tone, duplicating it any number of times required, each duplicate being an original. Your requirements for electros and stereos can be produced also. We have recently made a test of a two-colour letterpress job; the sheets to be printed were of a size that required 36 blocks on each sheet, size of each subject 6½ by 8 inches. We produced these blocks, 72 total, in sheets of 18 blocks each, each an original, finest register, and very fine type, as well as line work, and the figure of a lady, our total cost on this job being less than £6, and produced in 1½ days. They are now running on the letterpress for which they were made with perfect satisfaction. This will, in a measure, give you some conception of the relative cost between our method of producing these blocks and the present day methods.

In producing these blocks our method requires no key-sheets, two negatives being made direct from the copy, superimposed one upon the other to know that they are in perfect register. Then the first colour is laid down 36 times on one sheet from the original unit, and for the second colour the same operation applies; without any measure, or pull of proof, we can guarantee that the register is correct and perfect; then these sheets are put on hard rolled zinc sufficiently

314

Digitized by Google

thick, and are cut up in similar size sheets, each sheet containing 9 subjects; they are then handled at the same time under precisely the same conditions, hence the etching is absolutely uniform. We then have the 18 blocks, 9 on each sheet (one of each colour) ready for the printing press, at about the same cost as if we produced one or two. The metal in this block is harder and will last longer than type or stereos. We question whether or not this job could have been produced, 36 of each colour, for less than £25 or £30, and the time required would probably have been days, as against hours by our method. For us to duplicate these 72 blocks, 36 of each colour, the cost would not exceed £3; we besides

Eliminate the Expense and Time of Making-Ready.

We can produce flat plates practically any size from 3 by 4 to 50 by 80 in any number of colours that may be required, sharp lines and all in perfect register. Being a mechanical method we can produce 10 colours with the same accuracy of register as two colours.

Our process is equally adaptable to any printing press, flat-bed, offset, rotary, letterpress, etc.

For about two years we have shown and demonstrated this process at our London premises, which were first located at 19, Cursitor-street, but now located at Central House, Kingsway, to some of your largest and responsible, as well as to various other lithographers and letterpress printers, and to others identified with the printing trade. We have invited the criticism of the best and most reliable experts in each branch of the various allied industries.

I have been assured that the printing process of which I am the inventor and creator has economised and increased very greatly the one necessarily slow and difficult branch of the art, that of transferring, which has brought this branch of the business up to the same pitch of development and alacrity as the machinographic section has so recently attained with the offset, and the automatic feeders, and the reel-fed multi-colour machines; thus, with our method the transferring department is able to keep pace with the great strides attained by the machine department, and will help lithography to become the most expeditious, economic and versatile printing process of the pictorial arts. All the principal civilised countries of the world offer unimpeachable testimony as to the validity of this valuable process.

I am fully aware that there have been many processes, with various claims, introduced into the printing industry, which have at periods aroused interest at the moment with rather a sceptical feeling, on account of over-zealous proclamation of their virtues; with our process we have always frankly and courteously invited

The Fullest Investigation,

and make no claims that we cannot substantiate. It gives me great pleasure, gentlemen, to say that our process has been taken up by some of your largest lithographers in England. Our plant is in constant action: the process is being shown to various commercial heads, together with their experts, who call, not only in Great Britain, but from Russia, China, France, Germany, Switzerland, Italy, Peru, India, etc., who have read of it in various lithographic magazines.

In fact the process and machines are so convincing that it speaks for itself, and needs little to be said by me.

Our demonstrations are convincing, particularly to the experts, and those trained in the printing arts, who know what obstacles are constantly confronting them, when they attend demonstrations, use their own or other subjects, complete the job from originals, give them plates, either zinc or aluminium, steel or copper, and an impression pulled therefrom they carry away with them. This removes any question as to the commercial value and whether or not this process can make good my claim for it and the expectation of the party to whom such a demonstration has been given.

Our entrance and admission to the printing world will, we trust, be of service to you, from whom we have received every courtesy and encouragement; we shall endeavour to meet your generous reception and thank you sincerely for your friendly co-operation. We did not launch our process upon the world's markets until we had thoroughly tested and proved our claims, and produced commercial results.

I am convinced, with the small experience I have had with the Printex Process, that you, gentlemen, can, with your experience, talent and artistic temperament, apply this process to

A Larger Field of Work

than I have referred to to-night. I am submitting for your criticism and comment, plates and several designs; all the proofs are printed from plates which we produced. I trust the specimens here displayed for your severe criticism and inspection will reveal all that I have said.

In conclusion, permit me to say that I have been so impressed with the attention and patient hearing that you have granted me, that to show my appreciation, the simple words of "thank you" do not clearly express my feelings. I sincerely trust that I shall have the pleasure of meeting you, gentlemen, again and again, and that the present relations and your apparent interest shall never grow less. The Printex Process and Plant at Central House, Kingsway, and my services are at your disposal if at any time we can serve you.

Many of you, I assume, have been deeply interested in the printing craft since boyhood, while I have just begun, and realising that I have thus been speaking to printing experts I shall be pleased to try and answer any questions appertaining to the Printex Process as best I can, and to further elucidate any points which I may not have fully explained, and which I know have not passed your keen observation.

DISCUSSION.

The Chairman, in inviting a discussion, said the patient attention that had been given to the lecturer showed how much they had appreciated his lecture. It was quite a revolutionary idea that he had described, and it was being used in America. He congratulated him on his modesty and reserve, considering the great enthusiasm he had in his invention. He thought they should all go deeper into the subject. It seemed it was going to do away with type—there would be no need to trouble the typefounders if it did all that was claimed for it and came into general use.

A question was asked as to what was to prevent a printer from producing the stamp printing plates for surface printing if the lecturer was going to produce them at so small a cost.

Mr. Motley, in replying, said that no human being could duplicate the stamp he had shown unless he gave him the master key with which it was made. If they brought him the imitation they had made—and he would give them this master pattern to copy from—he would pick out every one of the imitations from the genuine ones made from this master key. He was able to do this on the basic principle that no human hand could draw two things, or two lines, exactly alike. When they built this master key up they enlarged to a given point which no one knew except the man who did it. Then they enlarged to another scale, may be 486½ times, which the mechanical skill of their machines would always register, and they did a bit of work on it, just touched one of the lines, say, and they might go to 1,500 times the enlargement of this master key. To reproduce that they would have to go over the scale on which they had worked and make every mark precisely like the master key. They could never do it. Suppose he were in the Post Office and wanted to see whether a stamp was a forgery or not of their original stamp, all he would do was to take the suspected stamp and make a negative from it enlarged to the scale of the master key and then superimpose it on the latter. He would not need a glass—the human eye could see at a glance the imperfections. A line as small as a hair became as large as a pencil. And where ever there was a shadow in the design it showed there was a false line and a variation from the original line which was made.

Mr. Reeves said he noticed that all the letterpress matter shown was a reproduction from one original. He asked the lecturer if he could reproduce a set of pages, say 16 up, and half-tones, on the same plate.

Mr. Motley: Yes, and 50 up, if you like.

Mr. Reeves: In the ordinary course of a book you take 16 different pages, or 32, or 64; can you reproduce these?

Mr. Motley: Just as you lay them out we can do it.

Mr. Reeves: Do you take one big negative?

Mr. Motley: No.

Mr. Reeves: If you take an ordinary book, the *Strand Magazine*, say, with about 16 pages, could you reproduce those pages of type and also half-tones on the one plate you print from?

Mr. Motley: Certainly.

Mr. Reeves: Would the cost be any greater?

Mr. Motley: No.

Mr. Reeves: There is nothing you have shown us this evening that has got anything but the one subject on. This sheet of type pages contains the same page reproduced 16 times over.

Mr. Motley immediately produced a sheet containing half-tone blocks of various sizes, with letterpress titles, and Mr. Reeves asked if it was all one negative or was it stepped.

Mr. Motley replied that it was stepped.

Mr. Reeves: Would the cost be any greater?

Mr. Motley: Yes, it would cost us more, as it would you. But we can put them all down a great deal cheaper. The pages can be put consecutively or in any way you like.

The Chairman here announced that he had been informed that questions were being put by non-members who were supporters of rival processes, and this he could not allow. The discussion must be confined to members of the Association.

Mr. W. Mumford said he was not quite satisfied with the remarks of the lecturer with regard to the protection from forgery of stamps. He told them a stamp could not be reproduced without the original. At the same time he showed them earlier in the evening an ordinary match-box cover which he had had given to him, and had reproduced. What was to prevent someone bringing an ordinary

In AMERICA

There is published only one weekly paper representative of the interests of employing printers. It is the most popular Printers' Paper read in that country:—

Because it is the Trade Business Journal.
Because it has a splendid news service, with twenty-two paid correspondents.
Because it deals with the practical always.
It is the only Paper which holds the attention of the man who owns the plant.
The PRINTING TRADE NEWS does not attempt to teach printers to set type, but it is the foremost authority on the latest efficiency methods, the organization activities, progress in cost system work, approved methods of printers' advertising and anything and everything that tends to make the printing business a pleasant and profitable one.

It is pre-eminently the trade journal English machine builders should use to make their product known in America.

We have good mechanics. Let us have good business men. Let the NEWS come to YOU every week. Europe $5.00 per year; Canada $3.00. 64 pages weekly.

stamp produced from the original in Mr. Motley's possession, using the machine, and printing the same kind of stamp?

Mr. MOTLEY: That is very easy. I would have this original master key to work from.

Mr. MUMFORD: If you can reproduce an ordinary match-box cover, anyone can reproduce a stamp made from that original. How are you going to prevent it?

Mr. MOTLEY: We have a way of preventing forgery, and the British Government has gone very thoroughly into that matter.

In answer to other questions Mr. MOTLEY said that if they gave him a colour subject to reproduce and wanted the best reproduction in seven colours, they could do it because they could register all the colours to a hair. It was not necessary to make separate blocks either; they were all etched under the same conditions in every way.

Mr. C. MORLEY, referring to the sheet of letterpress pages, said it was one page duplicated 32 times, and asked if the lecturer had a job of 32 different pages, would he be able to reproduce them 32 times, the same as the one page.

Mr. MOTLEY: Yes.

Mr. MORLEY: If there were two forms giving 16 pages on each side of the sheet, could you reproduce them with the same accuracy?

Mr. MOTLEY: Yes, but at a larger cost. I give perfect register of 32 or any number of pages you ask me to reproduce, but the difference would be just the difference I would save you in using type and in make-ready.

Mr. A. J. ROWLEY said that having seen Mr. Motley's process he congratulated him on its excellence. He did not think, however, it could be afforded by most people, the cost of the license was rather excessive. With four or five transfers to be made, they could not possibly afford Mr. Motley's expensive process. He thought the process was very remarkable, but it was not possible to adopt it for small transfers because the license was prohibitive.

A member asked, if they had a six-colour plate, and had got three colours already on the paper and the paper stretched, would it be possible to get the other three colours down to suit the former?

Mr. MOTLEY said that unfortunately for him he had not the control God Almighty had of keeping paper from stretching. They did not propose to do that, but if the stretch goes uniformly they could. They could make the whole plate over again, and remedy any defect quicker than could possibly be done by hand.

Mr. F. W. SEELEY proposed a vote of thanks to the lecturer, and said he had been feeling somewhat in the land of miracles that night. He had made sheaves of notes of questions he was going to ask, but at that late hour he would not do so. Mr. Motley had given them food for thought, and he was afraid some of them would go away scratching their heads and thinking that miracles were no longer unknown. It had been most interesting. He would like Mr. Motley to assure them his process could be used on stone as well as zinc plates, as many lithographers had capital locked up in stones.

Mr. E. C. MOYCE said he had very great pleasure in seconding the vote of thanks. In doing so he had particular pleasure, because he well remembered the very courteous response Mr. Motley gave him at a very busy time when he went to inform him about coming there that night. He spent a very valuable half-hour there, being shown many things of particular interest, and he felt convinced that he would prove equally as interesting to the members of the Association as he had to him, and especially to the lithographic branch of the business. Their technical lectures had been rather in the background of late, and it was gratifying that this had brought such a good audience. He asked the members to be instrumental in bringing about more technical lectures. They were deeply indebted to Mr. Motley for coming and showing them his investigations in a fresh field.

The CHAIRMAN then put the vote to the meeting, including in it thanks to Mr. Jarvis for his kindness in getting Mr. Motley to come there, and the motion was cordially carried, Mr. Motley briefly responding.

THE first festival banquet of the National Advertising Society and General Benefit and Benevolent Institution will be held in the Grand Hall of the Hotel Cecil, on Thursday, November 6th next. The first president, Lord Northcliffe, will preside, supported by the vice-presidents, Viscount Hambleden, Hon. H. L. W. Lawson, M.P., Sir W. H. Lever, Sir George Riddell, T. P. O'Connor, M.P., Waldorf Astor, M.P., and Frank Lloyd. The Society was only formed last July, and has received encouragement and support from the most influential and prominent personalities in the world of advertising. Full information as to tickets, etc., can be obtained from the clerk to the Society, 53, Fleet-street, E.C.

Newspaper Developments
IN
EAST CHESHIRE.

An interesting development in the journalism of East Cheshire is to take effect from October 18th. The *Macclesfield Times and Chronicle*, owned and conducted for many years past by Messrs. Heath Bros., of Macclesfield, has been purchased by a private company, the "Macclesfield Times," Ltd., consisting of leading Liberals in the Macclesfield and Knutsford parliamentary divisions, and its circulation and influence are to be extended considerably throughout the East Cheshire area, where it will be the only Liberal newspaper.

Col. W. B. Brocklehurst, M.P., for the Macclesfield Division is the chairman of the new company, Mr. Philip M. Oliver (Liberal candidate for the Knutsford Division) becomes vice-chairman, and Mr. Harold W. Whiston (chairman of the Macclesfield Liberal Association) the managing director.

Up to the present time the price of the paper has been twopence, but under the new *régimé* it will be reduced to a penny, whilst at the same time the size will be increased from ten to twelve pages. In Macclesfield the old title, the *Macclesfield Times*, will be continued, but there are now to be two branch issues, viz., the *East Cheshire Observer* in the residential districts of Wilmslow, Alderley and the neighbourhood, and the *Congleton Times* at Congleton, which is the second largest centre in the Macclesfield Division.

Mr. E. R. Clark, who was for many years sub-editor and chief reporter of the *Macclesfield Courier and Herald*, is taking charge of the issues as editor and manager, whilst Mr. E. B. C. Dickinson, who also spent a number of years with the *Macclesfield Courier*, has been appointed advertisement manager and sales organiser. Mr. Archibald Kenyon, for the past seven years on the staff of the *Cheltenham Chronicle* and *Gloucestershire Echo*, will be sub-editor and chief reporter at Macclesfield; Mr. A. Hull, who has represented the *Leicester Mail* at Loughborough, has been appointed the Congleton representative, whilst for the Wilmslow and Alderley area Mr. W. P. Stevens has transferred his services from the *Wilmslow Advertiser* to the new undertaking.

In a German Printing Office.

During a visit to Berlin, a representative of Messrs. Linotype and Machinery, Ltd., found that the plant of Messrs. E. S. Mittler and Sohn, while not the largest in that city, ranks very high amongst printing offices in Berlin. It is situated in a fine building, and is also known as the Imperial Court Printing Office, since it does high-grade work of a confidential nature for the German Government.

In a talk with the manager, the representative learned that the firm think nothing of printing from 20,000 to 40,000 impressions direct from Linotype slugs. The care taken of all the machinery in the works, the cleanliness of the departments and the satisfactory conditions under which the employees work, aid in maintaining the reputation of this concern as high-grade printers.

In giving an order for additional Linotypes, Messrs. Mittler wrote: "We use the machines exclusively for book-work, and in particular for many of our books which have to appear in the finest form. With ordinary care, the casting of the lines is excellent; we print Linotype matter as well on the finest art paper as on modern rough paper, and obtain as delicate and perfect an impression as from new hand-set type." An interesting leaflet is issued by Messrs. Linotype and Machinery, Ltd., on which is shown a view of Messrs. Mittler's works, and the interior of the room where the Linotype installation is housed, together with examples of printing done from from Linotype bars.

BRITISH
Exports & Imports of Printing Type.

The following figures show the exports and imports of printing type into the United Kingdom for the periods mentioned:—

Imports:—

	Sept.		Jan.-Sept.	
	Tons.	£	Tons.	£
1913	7	1,082	46	8,119
1912	6	865	36	6,379
1911	7	1,510	47	9,436

Exports:—

	Sept.		Jan.-Sept.	
	Tons.	£	Tons.	£
1913	43	6,915	420	70,659
1912	29	4,994	377	54,200
1911	41	6,345	376	58,185

American Books Exported to United KINGDOM.

The following figures give an idea of the growing trade of America with the United Kingdom in printed books, including music, during the past five years:—

	Actual Imports.		Retained in U.K	
	Cwts.	£.	Cwts.	£.
1912 ...	39,165	187,403	38,179	181,125
1911 ...	38,227	177,701	36,666	171,482
1910 ..	28,509	142,938	27,081	137,021
1909 ...	19,636	130.779	19,063	126,809
1908 ...	23,056	129,500	22,169	128,618

An important library sale is announced by Messrs. Sotheby for Wednesday, October 29th, and the two following afternoons. Among prominent lots are a copy of the first edition of Columna's "Hypnerotomachia Poliphiti," with fine impressions of the woodcuts attributed by some to Carpaccio, and a collection of original editions of some 64 tracts and pamphlets by Martin Luther.

Trade Notes.

THE death took place on Monday of Professor Stuart who was at one time managing director of the *Star* Newspaper Co.

THE Advertising Exhibition is being held this week at the Holland Park Skating Rink. The London Press is well represented.

WE understand that the *Globe* has changed hands, and has been acquired by a well-known Conservative M.P. The *Globe* was established 110 years ago.

THE majority of the female employees of the Berkshire Printing Co.'s works at Reading, who have been on strike during the past week, have settled their differences with the firm and resumed work.

THE death is announced of Mr. Edward Holden, at Southport, on Saturday morning last. He was the proprietor of the *Southport Daily News*, which was among the first of the daily newspapers to have a private telegraph wire from London.

MR. W. J. CONNOLL has purchased the goodwill of the business of Messrs. W. J. Connoll and Co., Ltd., late of 5, Maclean's-buildings, and will carry on business at 27-28, Fetter-lane, E.C., under the style of W. J. Connoll and Co.

MR. CHARLES JOHNSON is retiring after forty-one years' service on the staff of the Liverpool *Daily Post and Mercury* and *Echo*. For many years he was day overseer in charge of the *Echo* composing-room, and latterly sub editor of the *Weekly Mercury*. The event was celebrated on Monday by the presentation to him of a handsome marble clock in token of his colleague's esteem.

ST. JOHN AMBULANCE BRIGADE.—The new City of London (or printers') Division of the above was successfully launched the other evening, as the outcome of the first aid classes recently organised by the Printers' Medical Aid and Sanatoria Association. For the present the division will meet on Monday evening at the offices of the Correctors of the Press, 83-85, Farringdon-street, E.C. Dr. James Gooding, of 56, Leadenhall-street, has been appointed divisional surgeon, and Mr. Edwin D. Callick is the officer in charge. All communications concerning the new division should be sent to Mr. Arthur O'Connor, secretary of the Printers' Medical Aid Association, 68, Fleet-street, E.C. First aid classes for beginners are held every Tuesday at 7 15.

TENDERS WANTED—For the printing of minutes and year book for ensuing three years for the Oldham Finance and General Purposes Committee; particulars from Mr. J. H. Hallsworth, Town Hall, Oldham. For the supply of stationery, etc.; reading books, text books, maps, diagrams, and models; kindergarten materials for the Wigan Education Committee; forms of tender may be obtained from Mr. G. H. Mockler, Education Offices, King-street, Wigan. For supplying new books and rebinding books, for the Committee of the Macclesfield Free Library; particulars from the Librarian, Free Library, Park Green, Macclesfield. For the supply of stationery, books and forms, etc., for the use of the Glamorgan Constabulary; forms of tender from the Chief Constable's Office, Canton, Cardiff. For the supply of printing during 1914; particulars from the Harbour Office, Belfast.

INSTITUTE OF PRINTERS. — The opening night of the new session of the Institute of Printers and Kindred Trades of the British Empire takes place on Wednesday, 22nd inst., when the Fifteenth Annual Conversazione will be held at the St. Bride Foundation. The Council have arranged a special programme of entertainment for the occasion, commencing with a reception by the President, Sir George Riddell (*News of the World*), at 7 p.m., in the Large Hall. Among the attractions are a Café Chantant, a Short Whist Drive, a special exhibition illustrating the history of printing in Oriental, Slavonic, and other out-of-the-way types, also specimens of music printing from the earliest period to the present time from the St. Bride Foundation collections, specimens illustrating a new process of mechanical engraving by the Printex Machine, the evening's entertainment concluding with a dance in the Large Hall. During the evening the Printing School will be open for inspection.

M. CAMILLE CLEMENT, who for more than a quarter-of-a-century has been connected with the printing materials trade, has been appointed sole representative for France and her Colonies of the Caxton Type Foundry of Messrs. John Haddon and Co., London and Market Harborough.

THE *Daily Citizen* has celebrated its birthday, and messages of congratulation have been received from many eminent personages, including the Bishop of Birmingham, Sir Herbert Tree, Mr. Sidney Webb, Dr. Alfred Russell Wallace, the Lord Mayor of London, the Bishop of Oxford, Dr. Clifford, Sir W. Robertson Nicoll, Canon Adderley, Mr. Gordon Selfridge, Sir Thomas Lipton, Bishop Weldon, and Members of Parliament.

TENDERS ACCEPTED—For the supply of school materials for the Luton Education Committee; school books, stationery, and apparatus, Midland Educational Co., Ltd., Birmingham; kindergarten materials, T. Hope, Manchester; needlework materials, Blundell Bros. (Luton), Ltd. For printing and binding committee's reports, etc., for the Corporation of Worcester: Deighton and Co. For the supply to the Aberdeen Harbour Board of books and stationery; Edmond and Spark; printing, J. Avery and Co. For the London County Council; rubber stamps and accessories, Baddeley and Reynolds, Ltd., Old Bailey, E.C., item 20; pneumatic rubber Stamp Co. (Buck's patent), Queenhithe, E.C., items 13 to 19 and 21 to 25; H. Savage, Old-street, E.C., items 1 to 8 with extras and reductions; ditto, item 26; J. Waller and Co., Aldersgate-street, E.C., items 9 to 12 with extras, 27 and 28. Papers (various, etc.): Lepards and Smiths, Ltd., Great Earl-street, W.C., item 76; Spalding and Hodge, Ltd., Russell-street, W.C., item 30.

ON Friday morning last the staff of the *Electrical Review* "downed tools" in order to give their good wishes to Mr. W. G. Wicken on his retirement from the position of manager of the composing department, after 30 years' service with Messrs. H. Alabaster, Gatehouse and Co. Advantage was taken of the opportunity to present Mr. Wicken with a well-filled cigar cabinet, suitably inscribed. The presentation was made by Mr. E. S. Middleton, advertisement manager, after a brief address, signed by every member of the staff, had been read and presented by Mr. Albert Bridge, news editor. Every employee of the firm who could possibly manage it was present, and the company included Mr. A. H. Allen, M.I.E.E., assistant editor, Mr. J. Osborn, publishing department; Messrs. W. B. Warwick and E. H. Howard, photographic and engraving department; Mr. P. J. Haskell, accountancy and advertisement department, etc. We understand that Mr. Wicken has retired on a pension granted by the firm. His son, Mr. W. H. Wicken, succeeds to the position.

Exports of Printed Books.

The following were the exports of printed books from the United Kingdom during September, compared with other previous periods:—

	September		Jan.-Sept.	
	cwts.	£	cwts.	£
1913	45,243	268,829	339,787	1,998,054
1912	46,377	285,603	339,434	1,999,723
1911	46,324	307,774	310,786	1,949,637

New Master Printers' Association
AT BRIGHTON.

At the Costing Conference held in Brighton a few months ago, a committee was appointed to consider the advisability of forming a local Master Printers' Association for Brighton and district, and on October 10th Mr. A. E. Goodwin, secretary, Costing Committee, representing the Federation, attended a meeting specially convened to decide the matter. After hearing what had been accomplished in other districts through closer co-operation and the organisation of employing printers, it was unanimously decided to form an association.

Mr. J. Henson Infield, of the Southern Publishing Co., Ltd., was invited to take the post of president, and Mr. D. W. Gannett the position of secretary, and the names of an executive committee were also decided upon A draft constitution was considered, and it was suggested that a lunch or dinner should be arranged for at an early date to which all local printers should be invited, and the Association formally inaugurated.

Ten of the leading printers at Brighton were represented at this meeting, or had intimated their readiness to help the new Association.

Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be endorsed "PATENT DEPARTMENT," Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C. Telegrams: Stonhill, Fleet, London.

Applications.

21,958 SURY, J. C. M. J., photographic paper.
21,976 RUSSELL, W E., typewriters.
21,988 LIVESEY, F. H., appliance for attaching paper and other sheets to transparent and other drawing boards.
22,057 STAUDE, E. G., drying and stacking mechanism for machines for making envelopes or the like.
22,103 WERSAK, E., collapsible card boxes.
22,182 COMERY, J. W., and DRINKWATER, J. H., ornamentation of Christmas cards and cards of a like nature.
22,242 WALKER, A. H., receptacles for the sorts, matrices or type dies of typographical machines
22,300 WALKER, A. H., typographical machines.
22,303 PIERPONT, F. H., and LANSTON MONOTYPE CORPORATION, LTD., mechanism for producing low quads or spaces in typecasting machines.
22,383 BARBER, E., combined inkstand and pen-wiper.
22,398 FAIRBROTHER, H., envelope machine.

Specifications Published, 1912.

Account registers—Hudson; 16,704.
Mount for printing plates—Keats; 20,872.
Sheet-assembling mechanism—Goss Printing Press Co. of England; 21,459.
Cutting machine—Oppenheim; 21,809.
Loose-leaf pocket books and the like—Bartlett; 22,025.
Tear-off calendars and other articles of a similar character to tear-off calendars—Webster; 23,059.
Means and apparatus for the production of lettering designs, lines, dots, and the like upon zinc, litho stones, card, and the like specially applicable for reproducing purposes—Tyrer; 24,067.
Bottle crowning machines, bookbinding and tin-stamping presses and such like—Taylor; 24,931.
Stereotype and like casting machines—Leinweber; 26,802.
Post cards—Weber; 27,809.
Machines or apparatus for printing, cutting-off, and delivering sheets of wrapping paper—Paalen; 28,360.
Boxes of cardboard or the like for incandescent gas mantles or other fragile articles—Oglesby, Ayton and H. Stevenson and Sons, Ltd.; 29,526.

1913.

Folding or collapsible cardboard and like boxes—Somers; 7,667.
Locking mechanism for machines for making stereotype plates—Hopkins; 20,499.

COMPLETE SPECIFICATIONS OPEN TO PUBLIC INSPECTION BEFORE ACCEPTANCE.

1913.

Folding devices with movable plates for the manufacture of tubes and the like made from folded paper—Sinclair; 8,254.
Device for printing on curved surfaces—Leseurre and another; 21,221.

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help a..d an ornament thereunto."
FRANCIS BACON, Baron Verulam.

Here beginneth the next short lesson concerning salesmanship.

o o o

"Fiftics" I think I shall call these sort of talks. The reflections of a man of fifty. An age at which you are old enough to know better

o o o

than some who are younger.

o o o

I've been a travelling salesman; in printing, and in printing plates, and in the letting of floor space in printing Exhibitions.

o o o

The Great Globe and I were at one time both travelling in space.

o o o

I took on "a fresh job." The Great Globe didn't.

o o o

First fiftic—or cluster of fiftics.

o o o

A pearl necklace shall I say since we're talking of pearls just now.

o o o

First fiftic then——get a good thing to sell.

o o o

If it's print, let it be the best print. You can't sell successfully without enjoying the act of salesmanship.

o o o

Once more, the old reminder: "No profit grows where is no pleasure ta'en."

o o o

You can't enjoy selling a poor thing. And I'm thinking of *enjoying* the work.

o o o

One of the great snippety publishing houses can no doubt force a poor new publication on the market for some time, by mere power of the inter-advertising of its already established organs.

o o o

But if the new journal is a poor thing, a sort of in-bred unhealthy product, it will die in time; it will be censored out like "Judy" was censored into extinction. And the selling won't have been enjoyed while it lasted.

o o o

No, I don't altogether agree with H. G. Wells, whose "Tono Bungay" is written to show how rubbish can be successfully exploited.

o o o

Have a good thing, and make it constantly better. Get it out in good time, or if it's a "job" get it out at the time promised.

o o o

That, to be sure, is management; but it's also salesmanship. One satisfied customer makes many.

o o o

Donald Currie founded his fortune not with his fast new steamships to South Africa, but with old sailing vessels, which he saw to it should sail at the due time; and not anywhen, which was good enough for other sailing vessels in those days.

o o o

Sell a good thing in or at good time, with a good statement of the case. Buyers must often find that the salesman hasn't really a good knowledge of his book. Add the grace of good temper. When on business admit nothing into your talk except on business; but let the talk be as good as it is direct, and short and sharp. Cobden in his day was the typical good salesman; and most persuasive talker perhaps the country ever had. Working on the road, he made a big fortune on the road in ten years.

o o o

I think, too, it helps a man to have a good and definite aim. That might be retirement in twenty years with a good little competence. The Directory's full of businesses ten years old, very prosperous. Carey-street's full of businesses which were old and once flourishing, and only a short time ago began the downward course which leads Carey-streetwards.

o o o

Remember the great good that advertising is. And that it is not a gamble; it's a science; it's a certainly within reasonable conditions.

o o o

I am thinking of the law of averages. Do you think for instance the firms who year after year appear in the advertisement columns of this paper are there because of a fine sense of duty or because they love the editor. They would if they knew him; but some or many of them don't know him.

o o o

One of the best salesmen among modern printing and plate-making concerns once pointed out to me an advertisement of his in a certain journal and said "I'm keeping that appearing for one man," who, he knew, rather fancied that journal. But then that one man controlled the spending of thousands in the year.

o o o

It's a good thing to concentrate in our business salesmanship, but it's a good thing to be panoptical, too. (The word can be used by anyone mentioning this column).

o o o

It means having eyes all over the place. Saul was panoptical. In the Bible story we read that he went on the road to seek his father's asses, and incidentally looking about him he came across a kingdom.

o o o

I forget if there's any word about the asses turning up. Perhaps he advertised.

o o o

Samson did in his earlier day. He took two whole columns and fairly brought down the house.

o o o

To end up with one or two more goods, for the editor is standing up threateningly. Sell your good stuff in good time, and with good statement of case and good temper and with good confidence. The great discovery of the modern advertising and sales promotion movement is that the public is honest.

o o o

The bad debts in the *Times* "Encyclopædia" and like instalment distribution are, I believe, only about 3 per cent. The bad debts in Irish land-buying have been very far less than that.

o o o

Add good persistence.

o o o

Like everything else, good salesmanship is only to be attained by pains.

Genius itself is only one part inspiration; it is three parts perspiration.

o o o

Don't let enthusiasm flag. Harry Lauder was once late in arrival at a theatre. It was in a far northern town and the weather was northern; so northern that the line had been blocked for a while by a snowdrift. Lauder's way of putting his explanation was that the engine had "gaen aff the bile."

o o o

You and I have perhaps at times been engines that have gone off the "bile." If so let's "bile" up again. Even at fifty.

FRANK COLEBROOK.

MESSRS. L. ANTOINE FILS AND CO., the well-known writing ink manufacturers, of 13, Rose-street, Paternoster-square, E.C., hold an extensive stock of "modern" typewriter ribbons and carbon papers of various grades, of which they issue descriptive circulars that should be seen by all traders who can cultivate business on these lines.

The Advertiser and His Advertisement.

THIS is the day of the advertising expert. Advertising has advanced by leaps and bounds in recent years, and the publicity man is an established institution in every big business concern. But what of the countless multitude of small advertisers? Some of these have come under the influence of the new science of advertising, but on the minds of many its appeals have fallen with as little effect as water on a duck's back. They will not believe that any man can arrange their own advertisement of the business they have spent their whole lives in better than they can themselves. They must expend much time and no little pains in preparing what is really a miserable failure and a sore trial often to the unfortunate printer who has the job of setting it. The publisher often has to decide between accepting the advertisement and spoiling the appearance of his journal, or refusing it and losing an advertiser. Needless to say the former course is invariably adopted. Lord Northcliffe had something to say on the lack of care so many advertisers still show in the presentation of their advertisements, in an interview just before he left England for Canada. "It is," he said, "a kind of vanity, I suppose, which induces every man to believe that he can write an advertisement, but I personally lament the carelessness which causes some advertisers to insert in my own newspapers hopelessly unsuitable public appeals, and on more than one occasion I have sent them back to the advertisers. I can see the time coming when an advertisement will be judged as an advertisement, and the great advertisement copy writers will take rank with the great authors and great artists. I can see the time when every good advertisement will be signed by the man who produced it, and advertisers will be competing for signed advertisements by the best writers, just as editors compete now for stories signed by the best authors." Such mistaken advertisers would derive considerable benefit from a visit to the instructive Advertising Exhibition now being held at the Holland-park Rink, London, W., where the large and the small advertiser are alike catered for in a complete and interesting manner.

* * *

The Bookbinders' Strike.

THE dispute between Messrs. James Burn and Co., and their bookbinder employees at Kirby-street and the Esher works has now reached to its tenth week, and at the moment of writing appears as far from settlement as ever. All attempts to bring about an agreement have failed, the firm still maintains its position and the workers their's, and so a deadlock has been created. We understand that a proposal has been made to the mens' leaders by the publishing firms whose work has hitherto been executed by Messrs. Burn, to the effect that if the boycott was removed—that is, the determination of the organised operative bookbinders not to handle the work of any publisher doing business with Messrs. Burn—the publishers would be prepared to become parties to a Conference with a view to a settlement. The offer was made, on the express understanding that any settlement arrived at would affect the London works of Messrs. Burn only, leaving the works at Esher out of the question, but has been rejected. The claim of the workers is that the Union rates and conditions be observed there as they have been in the firm's works in London. That is the demand, and by that the workers intend to stand. The men say they can afford to wait until the settlement arrived at is a satisfactory one to them, so meanwhile the struggle is, unfortunately, to continue.

Costing Educational Campaign.

Progress in the North.

In addition to attending the meetings at Manchester and Liverpool of the Printers' Managers and Overseers Association, where the keenest interest was shown in the movement, the Organising Secretary visited 70 printing offices to ascertain what actual progress is being made. The result of this personal canvas has been most encouraging, in that he found that whilst very few have completed the installation of the model system, in quite 75 per cent. of the offices some steps are being taken to give effect to the Costing Committee's recommendations.

At Newcastle-on-Tyne a meeting of the local Master Printers' Association was well attended, Carlisle, Darlington and North Shields being represented. Special emphasis was laid upon the necessity for uniformity in costing methods, and Mr. Goodwin illustrated the importance of this with the diagrams prepared by Mr. Cecil Johnston for the Manchester meeting. Several speakers at this meeting expressed satisfaction with the results which the system had already given to them.

Mr. Goodwin spent several days in Newcastle and found there also that out of 15 offices at which he called, in 10 steps were being taken to change their methods of costing.

He assisted a number with advice on knotty points of allocation of expenditure, and stimulated others to take action. To Darlington he was able to pay a flying visit, and rendered special assistance to a firm who were ready to complete the installation of the system.

Digitized by Google

Whilst some printers are apt to be impatient and are asking why senseless differences in estimates still arise, it should be remembered that the benefits from this campaign must come slowly, the great thing is to know that progress is being made, and on all hands this is now to be seen.

Printers' Managers and Overseers ASSOCIATION.

MANCHESTER AND DISTRICT CENTRE.

The monthly general meeting was held at the Crown Hotel, Booth-street, Manchester, on Saturday last, when the minutes of two previous meetings were received and confirmed, and the following nominations of officers for 1913-14 were made:—President, Mr. Thos. Kirkwood; Vice-President, Mr. F. Burnett; Trustees, Messrs. Jas. A. Burton and Edward McVay; Executive Council, Messrs. J. McCosh, F. H. A. Francis, W. E. Dalby, T. Rignall, D. Wain, A. Gavin—four are required; Hon. Secretary, Mr. F. J. Hughes, 424, Morton-lane, Manchester.

There being no further business, the rest of the evening was devoted to music, when some 60 ladies and gentlemen were present, amongst whom were: Messrs. E. C. Moyce (General Secretary), and F. W. Seeley (London), A. Stavert (Edinburgh), J. W. Evans (Glasgow), President H. B. Lane and E. W. Tovey (Birmingham), Secretary Jas. N. Poole and J. Honeyman (Liverpool), Vice-President H. Dixon and J. Thackrah (Yorkshire), President C. T. Budden and J. T. Plant (North Midlands), President Thos. Kirkwood and Vice-President F. Burnett (Manchester), General Secretary H. Skinner, Manchester President J. D. French, and Wm. T. Harkness (Typographical Association).

The musical items were arranged by Mr. Wm. Teer, and the encores showed how well the audience were pleased.

During the evening some racy speeches were made by Messrs. H. Skinner, E. C. Moyce, F. W. Seeley, Thos. Kirkwood, F. Burnett, Wm. Teer, and other gentlemen.

Wee Mac.

Stationery Exports.

The following are the exports of stationery, other than paper, from the United Kingdom for the month of September, compared with the corresponding month of the two previous years:—

	1911.	1912.	1913.
To Germany ...	£8,922	£9,842	£9,921
" France... ...	5,590	4,432	3,999
" United States of America ..	5,868	7,100	7,504
" British India...	21,078	23,477	23,013
" Straits Settlements ...	3,652	4,006	4,273
" Ceylon ...	2,428	3,071	3,175
" Australia ...	21,938	35,076	32,159
" New Zealand	9,706	11,537	8,842
" Canada ...	11,052	16,065	11,123
" Other Countries... ...	76,480	85,326	87,475
Totals	£166,684	£199,032	£191,124

For the six months, ending September, the total exports reached £1,420,860, an increase of £73,116 over the same period of 1912, and an increase of £226,111 over the corresponding period of 1911.

THE LINOTYPE FOR BOOK WORK.

Faces of Type, etc. — Linotype Users have the choice of over 400 faces of type; new faces are being added continually. Many of these faces have been specially cut for Book Houses. (Every Linotype User has also the choice of 84 complete borders, 73 varieties of rules, dashes, etc., and over 600 figure faces.)

Alignment. — Face alignment on the Linotype is quite automatic; no adjustment whatever is necessary. Type matter set twenty years ago would align with that set to-day on any Linotype machine.

Justification. — Line justification on the Linotype is perfect; this applies to corrected lines as well as the initial product.

Quality of Product. — The Linotype line is cast in one complete piece. This permits of slow and deliberate movement in alignment and casting, which obviously is the best way of obtaining a perfect printing surface. Incidentally it may be mentioned here that, owing to the comparatively slow movements made by the machine, the cost of upkeep is only a few pence per week.

Ease of Make-up. — The superiority of the Linotype unit of composed matter is apparent immediately the operator empties his machine galley; whether the slugs are put on a random or on a galley there is no danger of pie. Linotype matter is so easily handled that a saving of fifty per cent. is effected in makeup alone.

Electrotypes and Stereotypes. — The Linotype shoulder height and depth of strike are ideal for wax, lead, or flong moulding, with the result that the finest possible plates are made from Linotype-set matter.

A Booklet containing specimens of Linotype Faces specially suitable for Book work will be sent to anybody interested in the production of high-class printing.

Financial.

Offices of the *British and Colonial Printer and Stationer*,
58, SHOE LANE, LONDON, E.C.
WEDNESDAY, Oct. 15th, 1913.

MONEY has continued in good supply this week, and with an easy demand rates have remained at former levels. The discount market has displayed considerable strength, and prices have hardened. Bullion movements have not been so heavy this week, and the withdrawal yesterday of £100,000 for Egypt absorbed the Bank's purchases of bar gold, and made a net efflux to date of £1,000. In the open market £800,000 came up for settlement, £150,000 of which will be absorbed by India and the trade requirements, and £100,000 by Turkey, the balance going to the Bank. Stock markets have fluctuated between cheerfulness and depression, and yesterday the tone was rather sluggish. Consols are a shade lower than a week ago, quotations being 72½ to $72\frac{5}{8}$ for money, and $72\frac{3}{4}$ to $72\frac{7}{8}$ for the account.

The miscellaneous industrial market has remained dull and inactive during the past week. In the section relating to paper and print there has been several movements both ways, and business has been on a smaller scale than recently. Rises have been recorded in Amalgamated Press Ord. of $\frac{1}{16}$, in Associated Newspapers Pref. of 6d., in Cassell and Co. of ½d., in *Daily Express* of 2, in *Lady's Pictorial* Pref. of ¼, in Raphael Tuck and Sons Pref. of $\frac{1}{16}$, and in Weldons Ord. of $\frac{1}{16}$. Falls have occurred in Carl Hentschel Pref. of ⅛, and in Ilford Ord. of $\frac{1}{16}$. Business has been done during the past seven days in Amalgamated Press Pref. at 21s., in John Dickinson and Co. Deb. at acc. 98; in *Financial News* Pref. at acc. 15s. 6d.; in Ilford Pref. at 18s. 9d., 19s., 19s 3d., and acc. 18s. 9d.; in *Illustrated London News* and *Sketch* Deb. at 65, in the Ord. at acc. 3s. 3d., and in the Pref. at acc. 13s.; in *Lady's Pictorial* Pref. at 55s.; in Edward Lloyd at 22s., 21s. 6d., 22s. 3d., and 22s.; in Mansell, Hunt, Catty and Co. Ord. at acc. 37s. 6d.; in George Newnes Pref. at 17s.; in C. Arthur Pearson Pref. at 70s.; in Raphael Tuck and Sons Ord. at 17s. 9d.; in Waterlow and Sons Def. Ord. at 26s. xd.; in Weldons Ord. at 31s. 3d. and 30s. 3d., and in the Pref. at 20s. 9d., 20s. 3d. and 20s. 7½d.; and in Wyman and Sons Pref. at 14s., 13s. 9d., and 14s. 6d.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 16 of the Companies Act, 1900. (The registration of Satisfaction is not compulsory.)

Amateur Sports Publishing Co. (1913), Ltd.—Particulars of £2,000 debentures, created September 11th, 1913, filed pursuant to Section 93 (3) of the Companies (Consolidation) Act, 1908; the amount of the present issue being £1,411. Property charged—the company's undertaking and property, present and future, including uncalled capital. No trustees.

National Envelope Co., Ltd.—Issue on September 3rd, 1913, of £500 debentures, part of a series of which particulars have already been filed.

COMPANY NOTICES.

BUSY BEE PRINTING AND PUBLISHING CO., Ltd.

A meeting of the company will be held at Liverpool, on October 17th, for the purpose of having an account laid before them, showing the manner in which the winding-up has been conducted and the property of the company disposed of, and of hearing any explanation that may be given by the liquidator.

LUDGATE PRINTING CO., Ltd.

At a meeting of the company, held at London, on October 7th, the following resolution was passed:—"That it has been proved to the satisfaction of this meeting that the company cannot, by reason of its liabilities, continue its business, and that it is advisable to wind up the same, and accordingly that the company be wound up voluntarily; and at the same meeting George E. Swinnerton, of 23, Devereux-court, Essex-street, Strand, W.C., was appointed liquidator for the purposes of such winding-up." Notice is given that a meeting of the creditors of the company will be held on Monday, October 27th.

COMMERCIAL INTELLIGENCE.

Re J. COX and CO., Printers.

The first meeting of the creditors of John Cox, lately trading as above, at 33, Union-street, Borough, S.E., and residing at 29, Dukesthorpe-road, Sydenham, was held at the London Bankruptcy Court, last week, before Mr. Daniel Williams, official receiver. The receiving order was made on September 22nd upon the joint petition of Spicer Bros., Ltd., and Tee and Whiten and J. Mead, Ltd., the act of bankruptcy alleged being the departure of the debtor on or about July 31st last with intent to defeat and delay the creditors. The chairman reported that the debtor had not surrendered under the proceedings, and was believed to have gone to Canada. Messrs. Oxborrow and Sons, a firm of accountants, were instructed by certain creditors last August to look into the debtor's books and see if some arrangement could be made for the disposal of the business. It appeared that the turnover was about £1,000, and the profits about £200 per annum. It was found that Mrs. Cox, the debtor's wife, had no title to sell the business and consequently the negotiations for the sale fell through. The books kept in the business consisted of cash and petty cash books, and bought and sold ledgers. They had been handed over to the official receiver's department and it appeared therefrom that there were book debts to the face value of about £200 to be collected. The office furniture had been distrained upon and sold, whilst the household furniture was claimed by the debtor's wife on the ground that she purchased it before marriage. A creditor stated that Mrs. Cox had informed him that she had not heard from her husband since his departure. She had a claim against the estate in respect of £300 lent to the debtor before marriage for the purpose of starting business. She had received about £20 from the book debts and was willing to hand the same over to the official receiver. Further she was willing to waive her claim to the £300 post nuptial loan subject to the creditors allowing her to retain all the furniture. In the absence of any resolution the case was left in the hands of the official receiver to be wound up in bankruptcy. The public examination of the debtor is fixed for November 12th, but his attendance then is hardly to be expected. The following proofs of debt were tendered.

Spicer Bros., Ltd.	£45
Michael and others	10

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIP DISSOLVED.

MAYOR, H. W., G. F., A. J., A., E., W. and T., trading as Mayor Bros., 16-18, Green-street, Bethnal-green, London, N.E., wholesale newsagents. A. Mayor retires. Debts by the remaining partners, who will in future carry on the business at the same address under the old style. May 31st.

THE BANKRUPTCY ACTS, 1883 AND 1890. RECEIVING ORDERS.

COOK, T. S., 516, Stretford-road, lately of 557, Chester-road, Old Trafford, Manchester, stationer, etc. Date of order, October 6th, made on the debtor's own petition. First meeting of creditors, October 22nd, 3 p.m., at the Official Receiver's Office, Byrom-street, Manchester. Public examination of debtor, October 28th, 10.30 a.m., at the Court House, Encombe-place, Salford. Date of adjudication order, October 8th.

OVEREND, J., lately trading at 4, Sun-street, Keighley, Yorks, stationer, etc. Date of order and of adjudication order, October 10th, made on the debtor's own petition. First meeting, October 23rd, 11 a.m., at the Official Receiver's Chambers, 12, Duke-street, Bradford. Examination November 19th, 10 a.m., at the County Court House, Manor-row, Bradford.

NOTICE OF DIVIDEND.

GWYER, A. E., 1a, Peckham-park-road, Camberwell, London, S.E., newsagent, etc. First and final dividend of 1s. 3d., any day except Saturday, 11 till 2, at Bankruptcy-buildings, Carey-street, W.C.

A Claim for Photographs.

In the City of London Court, on Thursday last, before Mr. Registrar Wild, Mr. Joseph Turner, trading as the Premier Engraving Co., 35-6, Hosier-lane, sued Wakefield and Co., trading as the Applied Art and Antique Co., 9, Howland-street, Tottenham-court-road, for 17s. 6d. for certain photographs supplied to the defendants. Mr. Halliday, in the employment of the plaintiff, said he called at the defendants' place with reference to taking photos for certain electros that were required by the defendants. He made arrangements to take an operator down to take photographs. The operator took the photographs. The price for the photos and blocks was to be about 30s. The defendants told him they would have the photos and if they did not require the blocks they would pay for the photos and leave the question of the blocks for a later date. The photographs were retouched and sent in to the defendants. Not hearing from the defendants he called later and enquired what the defendants were going to do and was then told they were not decided. The defendants' representative said that the price arranged was that a sum of 30s. should be paid for the photos and electros. The photographs which the plaintiffs had sent in were not satisfactory and not good enough for electros to be made from them. The plaintiff said that the photos were sent to the defendants in June, 1912, and this was the first he had heard of the photographs being unsatisfactory. The Registrar said it appeared to him that the plaintiff had carried out part of the defendants' order and was waiting to receive further instructions to complete the matter. The defendants had not given the further instructions, and plaintiff therefore made the claim for the work he had done. The defendants could not get out of paying the plaintiff for the work which had been done by not giving the subsequent order. He (the Registrar) would give the defendants an opportunity of having the work completed at the original price agreed upon by the plaintiff. He would adjourn the case for a fortnight if the defendants liked to give the plaintiff the order for the electros and pay £1 10s. and 3s. costs, otherwise there would be judgment for the plaintiff for the work already done and costs. The defendants were to give the order within a reasonable time. The case was adjourned until October 23rd.

The late Mr. W. C. Hazlitt, author of "Bibliographical Collection and Notes on Early English Literature," etc., has left estate of the value of £10,831.

SPECIAL PREPAID ADVERTISEMENTS.

BOOKBINDING SECTION.

Bookbinding Notes and News.

The progress of events in connection with the strike at Messrs. Burn and Co.'s London establishment has been duly chronicled in the successive weekly issues of this journal that have been published since our last Bookbinding number. At the time of writing there is practically no change in the position to record, but any fresh development that may occur before this issue closes for press will be referred to on another page.

Commenting on the lessons of the strike, a writer in a prominent London daily paper suggested that the publishers might avert delay by sending out their more important books in paper wrappers, or without any kind of cover at all, giving a written guarantee to purchasers that volumes issued in this crude form should be duly bound in orthodox cloth later on. To carry out the former part of the idea would be only to copy current Continental practice, the cloth binding of books at first hand being largely unknown on the other side of the Channel. Dealing with the question generally, "Jacob Omnium," in the *Bookseller*, says:—"It is not easy to feel at all confident that this plan would be preferred to the simpler one of waiting for the bookbinders' trouble to adjust itself. Certain it is that a good many of the books which had been issued, and handed about, and read in the form suggested, would hardly be worth putting into cloth covers at a later stage of their career. The alternative idea was also mooted that, strike or no strike, books should habitually be published in paper covers, 'leaving the buyer to incur the cost of binding for himself later, if the book proved to be deserving in quality and permanent in value.' It would be a sorry look-out for the binding industry if this system were generally adopted, for it would mean, in practice, that only a very small proportion of the books issued every year would ever get bound at all. However, there is no occasion for alarm on that score, since the ingrained British prejudice against the paper-covered volume is, to all appearance, as strong as ever. To the average English reader, a book which is not bound in cloth, or in some still more substantial material, is *ipso facto* a book of no importance. Paper covers are regarded as good enough for the cheaper kinds of popular reprints, and perhaps for the sort of ephemeral sensation story that one buys to beguile the tedium of a railway journey. But the paper-covered new novel of recognised literary quality, as it flourishes on the other side of the Channel, and the paper-covered volume of consequence in any other department of literature, have yet to be acclimatised in this country, and there are no signs that the process is within measurable distance of achievement."

Mr. S. Stubbings, formerly secretary of the old Society of Day Working Bookbinders, has been elected secretary of the united London branch of the N.U.B.M.R., Mr. T. E. Powell being the financial secretary and Mr. H. E. Friend the organising secretary.

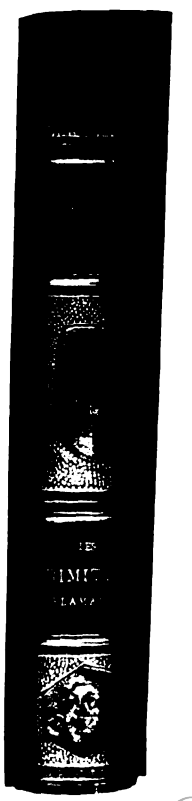
The imports of book cloth during September amounted to 38,700 yards, value £963, as compared with 36,510 yards, value £941, in the corresponding month of last year, and 43,432 yards, value £1,056, in September, 1911.

One of the usual type of articles on the advantages to the "artistic girl" of taking up art binding as a profession appeared in the Newcastle *Evening Mail* of September 15th. One extract will be sufficient. Said the writer:—"For those who intend to take up bookbinding merely as a hobby, six months' training will be quite sufficient. The Newcastle Handicrafts Co., it might be mentioned, provide courses of instruction, comprising twelve lessons, for two guineas for each course, but the bookbinder who intends to work professionally should have a year's training, working every day and all day. There may possibly be a few girls who are attracted by this profession, but who fear failure through want of definite artistic talent. A gift of decoration is, of course, of great value, but it is not absolutely essential. There is always a demand for simple books, and a woman need not think that because she is not an artist she cannot succeed as a bookbinder. Application and perseverance are the chief qualifications, and, provided she has these, success is always within her reach."

We understand that the special Library Bindings of Messrs. Geo. G. Harrap and Co.'s publications, referred to in our last Bookbinding number, are executed by Messrs. B. Riley and Co., Ltd., Huddersfield. Copies so bound can only be obtained through Messrs. Sinclair and Woolston, Ltd., of Nottingham.

Mr. Wm. Thos. Birts, a director of the firm of Watkins, Watkins and Co., Ltd., wholesale binders, Cowan-street, Camberwell, has retired, after 30 years' association with the business. The employes of the firm, some 250 in number, decided to testify to the esteem in which Mr. Birt was held by them by making him a presentation. They accordingly prepared an illuminated address, enclosed in an artistic binding, which was handed to Mr. Birts on the occasion of a farewell gathering held in one of the work-rooms on October 2nd, by Mr. S. Valiant, sen, who had been connected with the business for more than sixty years. Mr. Birts acknowledged the presentation in a neat little speech, in the course of which he mentioned that his sons were taking the reins of office, and would no doubt uphold the past traditions of the business.

For the sake of the candidates who will compete for the prize offered by the *Librarian* for the best Bibliography of Bookbinding, we are glad to see the announcement in the October issue that "Without having changed our opinion in any way, we have decided to double the value of the prize for the Bibliography of Bookbinding in deference to the opinion expressed in the *British and Colonial Printer and Stationer*." The amount of the prize is now two guineas. We dare say that the sum will now attract a few librarians in embryo who wish to compile a bibliography as an exercise, but we cannot conceive that anyone skilled in the compilation of bibliographies, and possessing an intimate knowledge of the literature of bookbinding, will be induced to compete for the prize, even though the original sum has been doubled. As we have previously remarked, a bibliography of bookbinding on well-considered lines is a desideratum, and we await its publication with considerable interest.



In connection with an article on "The National Competition of Schools of Art, 1913," in the September number of the *Studio*, two illustrations of leather-tooled bindings, by Mr. Alexander J. Vaughan, are given. Bookbindings are dismissed in a few words: "The book-covers, collectively, were below the average of last year, but designs of interest were contributed by Mr. Alexander J. Vaughan, of Camberwell, Mr. Arthur W. Freeman, of Birmingham (Margaret-street), Mr. Charles Moore, of Leicester, and Miss Florence Shuttleworth, of Skipton."

According to the *Librarian*, electric forming irons for bookbinding have been introduced, and are said to be far in advance of the ordinary steam irons.

In a recent issue of the *Lancet* a rather curious suggestion was made by a correspondent. "I do not know," said he, "for certain what are the factors which govern the colour of the binding of any particular scientific work, but would like to suggest that if it is possible a little method should be introduced into the choice. If all works of 'medicine' could be bound in blue, all those of 'surgery' in red, all those of 'chemistry' in green, and so on, the arrangement of books and the discovery of information would be much assisted. If those in authority in the medical profession met the publishing trade on this matter, surely an innovation which would be a benefit to the busy practitioner and to the librarian, and which would prevent the present riot of colour which is observable to anybody with a moderately sized library, would be introduced. Sometimes it is particularly annoying to have two books, on diametrically opposite subjects, of the same size and shape, and the same colour binding, as the twins will not always keep in their respective departments. I should like to see this classification applied to books on many other subjects—*e.g.*, all French dictionaries of one colour, all German dictionaries of another colour, all Spanish dictionaries of another, and so forth." In a brief and rather playful comment, the editor of the *Lancet* remarked that the use of colour as a help to systematic arrangement is unduly neglected, "but no rules of the sort suggested by our correspondent would be kept by publishers or authors who placed the value of conspicuousness unduly high. What an advertisement for both it would be to be responsible for, say, *the only* mauve biology." We remember reading somewhere about a great Continental book collector who adopted some such principle in having his treasures bound.

The Graphic Arts Trades Exhibition which was open at Amsterdam until the end of September contained a few exhibits relating to Bookbinding. The most important collection was that of J. Brandt en Zonen, of Amsterdam. Their work in publishers' cloth covers is good, but their art bookbinding shows a very high level in design and craftsmanship. A Bible printed by the Harlem firm of Enschede and Son was shown in a leather cover specially designed for presentation to the Princess Juliana, the heir to the Dutch throne. Mr. F. Proost, of this firm, has made art bookbinding his special study, in the course of which he was for some time with the firm of Sangorski and Sutcliffe, the well-known English binders. Mr. E. P. van Bommel was responsible for a collection of publishers' cloth bindings, quite striking in design, approximating more to the German style than to the cloth covers used in this country. Mr. A. M. Oosterbaan had a small exhibit, which however was very interesting. His bindings have an originality due to the fact that he designs his own tools, and has them cut for him. Designs in which various combinations of these tools occur were shown. An interesting machine was shown in this section, *i.e.*, the Jimbson "Fortuna" leather-paring apparatus, which is used by shoemakers as well as bookbinders. In connection with the bookbinding exhibits may also be noticed the stall of the Bleicherei, Farberei and Appreturan, who showed a fine range of book cloths. The Oxford University Press had the usual fine display of art bindings. In one of its articles on the Exhibition, the Dutch bookbinding journal, *Magnus*, says that "the glass cases containing the bookbinding exhibits of the Oxford University Press were greatly admired. This exhibit comprised a beautiful collection of handwork, including various editions of the Bible, Common Prayer and Altar Services, all displaying choice workmanship and rivalling each other in delicacy. The black morocco bindings, so exquisite in finish, the gilt edges of the leaves with beautiful green and red grounds, were also highly praised. Then there were editions of Shakespeare in the Grolier style, Browning's poetical works in a variety of styles, beautiful inlaid bindings and fine marbling, all forming one of the finest collections ever seen."

A very unusual piece of binding has lately been completed by that well-known Brussels art binder, M. H. Beenkens, for a private customer. It is on a copy of Fierens-Gevaert's "Les Primitives Flamands" (1908). Some time since, a certain old lady of a prudish turn of mind, who had long possessed a picture by Branghel, a noted Flemish artist (1568-1625), representing the "Descent into Hell," which contained many nude figures, decided that her modesty could no longer stand the sight of the latter, and accordingly cut the picture to pieces, preserving only the heads of the figures, 44 in all. Uultimately these precious scraps of painted canvas came into the possession of M. Wehrli, of Brussels, who commissioned M. Beenkens to incorporate them in a binding. The back of the volume, an illustration of which is reproduced herewith from *Vers L'Art*, has three, the upper cover twenty-two, and the lower nineteen. The binding is in green morocco, and the only decoration, apart from the little painted plaques, which are of all sorts of shapes and sizes, is the *au pointille* gilt dot tooling

Digitized by Google

shown. The executant of this curious piece of work has lately made a speciality of book cover decoration in repousse style, similar to those examples illustrated in our Bookbinding number of December, 1910. A binding of this type, on a copy of "Le Cœur des Humbles," is shown by M. Beenkens at the Ghent Exhibition, and has gained him a Grand Prix. It is in green morocco, with a large central inlay of calf on the upper cover, decorated in repousse with a design of an Arab cavalier. The Museé du Livre at Brussels has commissioned M. Beenkens to bind 3 volumes of their *Revue* in green morocco, with the Belgian lion in gilt repousse on the covers.

The Parisian Book Finishers Association is just now discussing a new scale of wages with the employing binders of the city and district, and matters do not appear to go very smoothly, judged from the fact that the Association has appealed to workers in that line in the provinces and abroad not to entertain any offers of employment in Paris until the affair is settled.

The problem of the leather binding, *i.e.*, the best way, if there be any way, to preserve its flexibility and prevent its going to pieces at the hinges, is instructively touched upon by Miss Janet C. Lewis in the August issue of "Special Libraries," says a writer in a recent issue of the *Publishers' Circular*. "But she withholds the most valuable and practically useful part of her knowledge on the subject; for, after relating her varied experience with leather bindings and holding our breathless attention to the point where, after much unsuccessful experimenting, she at last 'obtained an animal and vegetable oil combined which, owing to its penetration, has proved to be an excellent lubricant and food for the leather,' she abruptly and unkindly leaves us to guess, if we can, the magic formula used by her in the composition of this elixir of life for leather-bound books. Nevertheless, some of the observations that precede this cruel betrayal of our faith are worth quoting. She says: 'Surface lubricating is of very little real avail, as in the use of vaseline or lucelline or like mineral oils, which lack the essential penetrating qualities owing to their being of a mineral nature. An animal or a vegetable oil is the only kind which the leather really absorbs.'" Book-owners are further cautioned not to shut up leather-bound books in glass cases, or where there is insufficient circulation of air.

On the occasion of the recent Labour Day Parade at Lafayette, Indiana, U.S.A., one of the cars had a huge imitation account book, got up by the members of the local branch of the International Brotherhood of Bookbinders. It was 93 inches high, 67½ inches over all from back to front, and 18 inches thick. In the upper back panel was the word "Ledger," in the lower, "Local Union 143, I. B. of B." In the covers on either side was the Bookbinders' Union Label, 20 inches across. The inside frame was built of paper crates and miscellaneous pieces of boxes, covered with several layers of strawboard. The back and front were formed with barrel hoops and covered with strawboard to conform to them. The edges were then covered with paper and greened, the sides were covered with flesh-coloured paper and the back and border with heavy red paper resembling russia leather. The gold lines were made of bond paper painted with gold enamel, as was also the lettering, the same being cut properly and applied afterward. The burned lines were of strips of paper of the proper shade. The bookbinders' labels were sketched on white enamel board in india ink. The book was praised on every hand as being the best thing in the entire Parade, and was a splendid representation of an extra-bound book. The hubs or projecting bands on the back were sixteen thicknessess of strawboards. In taking the book out of the bindery where made, it had to be lowered down the elevator shaft with rope and tackle.

From time to time we have drawn attention to the establishment of binderies in American libraries. In the September number of the American *Library Journal*, is a concise and interesting article on "The Value of a University Bindery," by Mr. Thomas P. Ayer, the supervisor of binding in the Columbia University Library. After indicating the reasons for the unsatisfactory binding which has been done for many of the American libraries during past years, the writer points out that the large university library has constantly more pressing demands for prompt service in binding than many more public institutions, and he comes to the conclusion that the only satisfactory solution which will meet the demands of a large university library is a small

bindery on the premises, supervised by one equipped with a scientific knowledge of binding and a keen appreciation of the problems of library administration. With a bindery so organised under library control a better regulation of methods, materials, and service is possible, and there is also a saving of both time and cost of packing and transportation. The writer enumerates some of the larger libraries which have demonstrated the value of a library bindery, and he proceeds to give the experience of the Columbia University Library. "In 1911 a full-fledged bindery was established in response to the increased demand for prompt service. In addition to the rush work, the important serial binding, and the rebinding of the more valuable books and sets was done. A year's test proved the bindery a success economically, as well as producing the desired quality of workmanship. Prompt service, a thorough standardisation of materials and type, and a constant, closer supervision of the individual treatment of volumes were other attendant features of satisfaction. From time to time, to meet the further increased demands of the library, the bindery was organised even more fully, each addition providing a better division of labour, so that at the same time the economy of a larger home bindery was demonstrated. Inspection of the binding records for three years shows: first, the cost of the miscellaneous work done at the library previous to the establishment of the bindery, with the actual binding done at outside binders; second, the combination of this miscellaneous work with a portion of the regular binding; and third, the successful competition with all outside binders." We append the tables, the last of which covers the period when more than fifty per cent. of the binding was done under the library roof.

According to the New York *Printing Trade News*, the following are the lowest prices at which, in that city, bookbinding work can be charged in order to make a profit. In reprinting them we do not, of course, suggest the possibility of British binders being able to invoice their work on such a basis, but merely do so in order to enable our readers to see just what proportion, in the chief bookbinding centre of the United States, the various operations bear to one another, in the matter of cost.

Per hour.	s.	d.

In commenting on these figures, our contemporary says that 20 per cent. real profit, after all expenses have been paid, including the proprietor's salary, is too low, considering the risks of the business.

The method adopted for gilding on silk or velvet is, from the delicate nature of these substances, necessarily different to that laid down for gilding on leather. The glaire used on the leather would tend to stain, and for this reason it is necessary to use other means for fixing the gold. One method by which this may be effected is by drying the whites of eggs and reducing them to a powder, which is then put into a small bottle and tightly secured over the top with a piece of very fine muslin. By this means the powder may be equally distributed over the space intended for gilding. Gum Sandarac is, however, more generally used for this purpose. The powder being applied, the gold is cut in slips and taken on a roll, of a circumference equal to the length of the space the gold is intended to be applied on. The design is then firmly impressed and the superfluous gold brushed off with a soft brush or clean piece of cotton wool. Where the design is large, the impression must be given with the greatest care, to prevent breaking the gold.

SOME Bindings at the Central School OF ARTS AND CRAFTS.

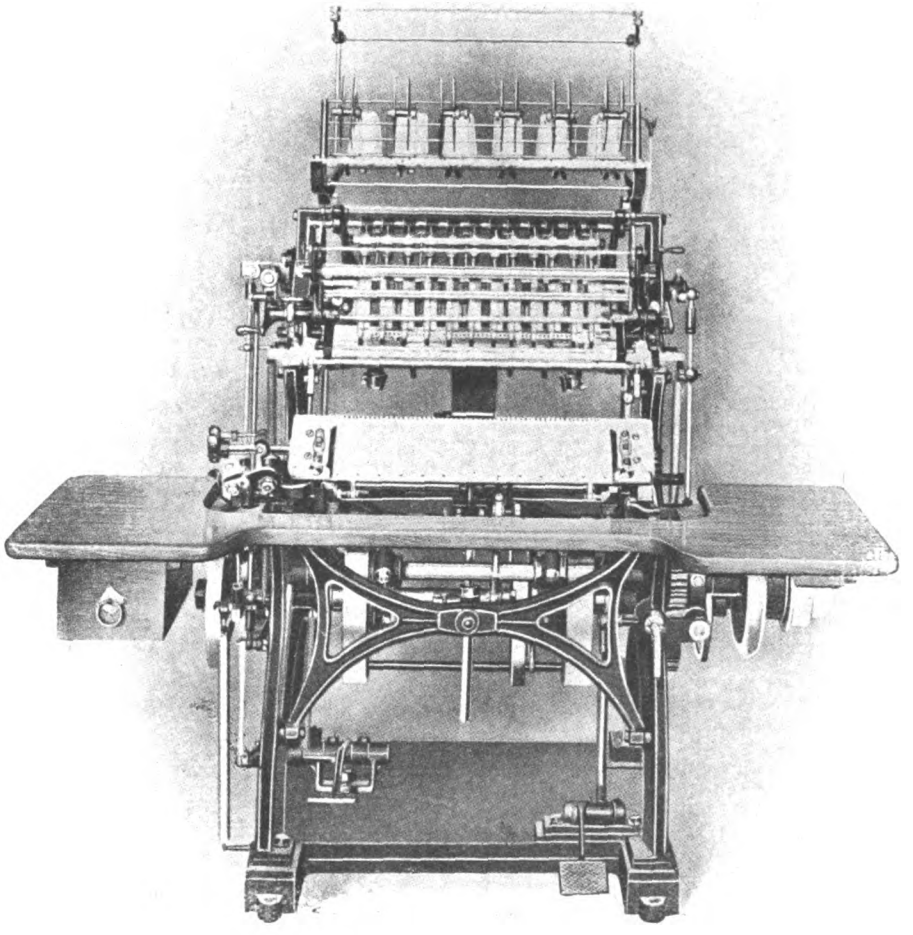
The examples of bookbinding included in the annual exhibition of the work of the students at the Central School of Arts and Crafts, Southampton-row (briefly alluded to in our last Bookbinding number), although not numerous, presented several points of interest. Of the work of what we may term the advanced students of the evening class it is not necessary to say much more than that it was quite up to the standard which we always look for on these occasions. There were some nice examples by H. W. Kramer, including a thick 8vo. edition of the "Ingoldsby Legends," in dark blue morocco, the covers decorated by a large rectangular panel, outlined by fillets with a green strip inlay between, and having semi-circular recesses in the sides, at which points two large diamond-shaped panels, outlined in a similar manner, intersected and interlaced. Though quite plain in style and treatment, this was a design of some vigour.

Most of the specimens of binding shown this year were the work of students of bookbinding at the Day Technical School, an innovation which was of the more value as it enabled some estimate to be arrived at of the importance and utility of this branch of the institution. The examples on view were amply sufficient to demonstrate that much good work is being done in this direction, and of a more varied character than one generally finds in displays of this sort. For instance, there were several specimens of half and three-quarter binding in art linen cloth and morocco, plain, restful, but withal substantial bits of work, which afforded a welcome relief to the elaboration of some of the more highly decorated examples of whole binding in leather. There was also a small 4to. edition of the "Rape of the Lock," bound by A. L. Hackman in sprinkled calf, decorated with an eighteenth century English panel design, a very faithful rendering of a style but seldom seen nowadays. In this and most other cases the decorative work of the Day School students is characterised by comparative simplicity. This is not, however, due to any lack of the necessary tools wherewith to produce more elaborate compositions, as amongst the exhibits is an oblong 8vo. panel in green morocco, the inscription on the upper part of which sets forth that it bears "Impressions of Tools cut by Students of the Bookbinding class in the Day Technical School." There are about 60 in all, ranging in size from circular rosette ornaments nearly ¾ in. diameter down to tiny roundels. Examples of their use in various combinations were seen on several of the volumes exhibited, whilst impressions of some of them in blind occurred on the binding of a folio Psalter in light brown calf, the covers of which had inner and outer borders of ornament, enclosing a large central rectangular panel divided up into lozenge-shaped compartments, alternately filled with a quatrefoil leaf and a sexfoil star, the whole design being rather reminiscent of late fifteenth century work.

Amongst the gold tooled books from the Day School may be mentioned a copy of Jacobi's "Gesta Typographica," 8vo., in crimson morocco, a plain three-line border round the edge of the cover enclosing a rectangular panel with the title thereon in Roman lettering. The decoration was by W. F. Matthews, whose good work in this direction was also in evidence on other exhibits, including two out of three 4to. copies of Spenser's "Four Hymns" that were on show, bound in various styles and materials. One was in dark purple calf, decorated with plain multiple-line borders, the intersection of which at the centres of the sides produced simple ornamental designs. The enclosed central space bore the title lettering in large Roman caps. at top and bottom, with the school monogram in the middle between. This was bound by S. H. Cole. On another of the Spensers, bound in red morocco by R. M. Middleton, the same design was repeated, with the addition of tiny green spots to the gilt roundels in the inner border. The third Spenser, also bound by Cole, but decorated by Wickman, was in light brown calf. A five-line border, alternately dotted and plain, was arranged in "Oxford frame" style, conventionalised leaf ornaments being placed at the points where the lines intersected. A design of a more advanced character was seen on a copy of the "Rape of the Lock" in chocolate morocco. The margins of the boards were left plain, the decoration being restricted to a large square panel, outlined by a border of stamped trefoil ornament, divided into diamond-shaped panels with gilt roundels at the crossing points of the diagonals. A circular central space contained the lettering. This was bound by Middleton and decorated by H. J. Woodley.

The presentation volumes prepared for the London County Council in connection with official ceremonial events are usually bound in the Central School, generally in a plain and simple style. A good example was the book of "Songs of London School Children," got out on the occasion of their visit to T.M. the King and Queen at Buckingham Palace on July 19th last. We illustrated the cover of one of the volumes; the other was identical, save that the Royal monogram was altered to M. R.

A Binding from the Central School of Arts and Crafts.



According to *Kemp's Mercantile Gazette* there were three failures in the printing and stationery trades of England and Wales for the week ending Friday, October 10th, the corresponding week in 1912 also showed three.

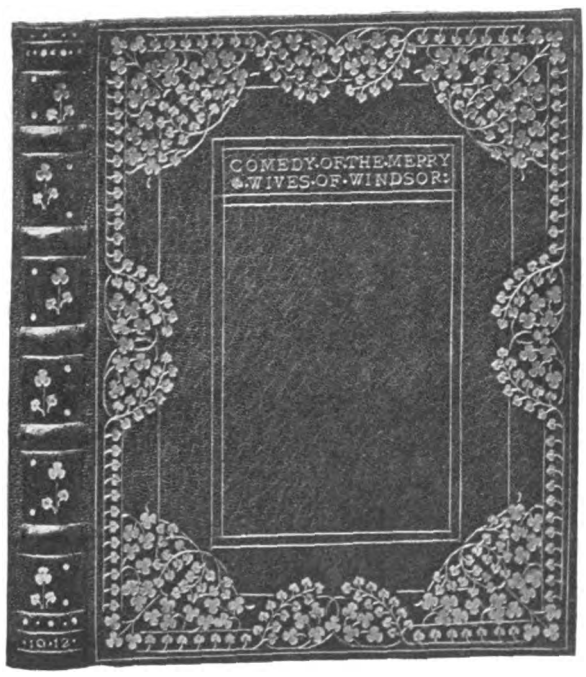
TECHNICAL

Instruction in Bookbinding.



XV.

At the Science and Art Schools, Skipton.

The little town of Skipton, in the West Riding of Yorkshire, may in a sense be looked upon as a sort of Northern border outpost of that vast industrial district which stretches almost unbroken from Nottingham to Leeds, and thence North-westward for some distance towards the moors. Although its population probably does not exceed about 14,000, it is yet one of those places which call for special treatment, being neither wholly industrial or agricultural. The educational needs of the district, as regards technical instruction, are well looked after by the Higher Education Committee of the West Riding C.C., and the Science and Art Schools, which are in close touch with the local Mechanics' Institute, provide quite unusual opportunities of gaining knowledge in a variety of subjects, whether of local industrial importance or not.

Amongst the classes is one for instruction in Bookbinding, which was started about five years ago with the object of cultivating in the neighbourhood a better taste for an artistic and well-bound book. It is, of course, not on a large scale, the number of pupils averaging about a dozen, but it has the advantage of being under the personal care of the head master of the school, Mr. W. T. Shuttleworth, Cert. A.M., who also furnishes instruction in the allied arts of cover designing and leather decoration in the repousse style. There is a day class on Tuesday afternoons from 2 till 4, and Saturday mornings from 10 to 12, the evening class being held on Monday and Wednesday from 7 to 9 or 9.30. The fee is in either case 6s. per term, of which there are are three in the school year. The present one commenced on September 22nd.

Both Forwarding and Finishing are taught, the object of the Course being to "encourage the binding of books in the best manner," and students are prepared for the examinations of the City and Guilds of London Institute. It says much for the quality of Mr. Shuttleworth's teaching that this bookbinding class has, during each year of its existence, been successful in the National Art Competition. Last year Miss F. Shuttleworth received an award, and this year one has been gained by Mr. D. Lister. The covers of two of the books thus premiated are illustrated herewith. That of Miss Shuttleworth is bound in green levant, the other being in dark green seal. A pupil in this class won the West Riding County Craft Scholarship of £50, which has recently been renewed for a third year. Several of the students are in the employ of local bookbinding firms, who take considerable interest in the work, and encourage it by offering prizes from time to time. An exhibition of work carried out in the school classes is held every autumn, this year's display being on September 18th, 19th and 20th, when there was a good show of specimens of binding, which was certainly the best that the class has yet produced.

By Miss F. Shuttleworth.

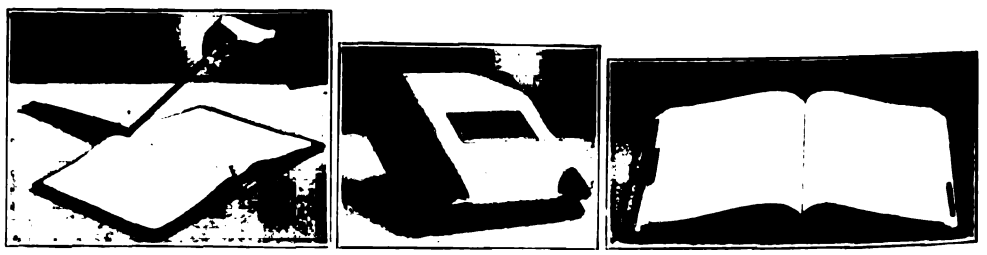
By Mr. D. Lister.

Bookbindings from the Science and Art School, Skipton.

A Loose-Section Ledger.

Although the loose-leaf ledger has been with us quite a number of years, many business people, not to speak of others, have objections to it, on the score that it constitutes too violent a departure from the old-style ledger, apart from the fact that the removable leaf system may offer temptations to impecunious book-keepers.

Mr. H. J. Hollington, of Enfield, a member of the N.U.B.M.R., has therefore devised and patented a loose sectional ledger, the principal feature of which, as the name suggests, is that it is only the sections of which the volume is made up, not the leaves, that are removable at will. The mechanism is of a very simple nature. It consists of a case, combs, blades and a lock. The case is a cavity containing the combs, the combs are arranged for holding the blades, the blades for holding the sections of paper, and the lock secures the sections in their respective places, which makes it impossible for anyone but the authorised person to remove a sheet without arousing suspicion that the ledger has been tampered with.



Being in possession of the "Hollington" Loose Sectional Ledger is exactly the same as being in possession of a ledger of the type that has been in use for hundreds of years, only, when the leaves are filled, instead of placing the book in its resting place or destroying it, one has only to remove the sections and place them in the "Hollington" transfer cases for future reference, or destroy them, as the case may be. The ledger is then empty, and ready to receive a fresh supply of sections of paper.

If the cavity be from one inch to five inches, one sheet can be as easily used and secured as five or six hundred sheets. The "Hollington" Loose Sectional Ledger is not intended for ledger work only, but can be used as a cash book, day book, journal, register, pattern book, stock book, or any other book that an office may have in use. Or by the aid of dividing sheets it may be used as a ledger, cash book, and journal combined.

The "case," which may be covered with any of the usual materials, cloth, leather, vellum, etc., being procured, together with a stock of loose sections, the filling process is as follows:

Open covers, unlock the ledger, raise the locking bar and secure bar, raise blades at bottom end, and place them over the top. Take a section of the paper, open it in the centre, bring down first blade in centre of section, place it in the slot opposite upper end. Close section and continue until all the sections are in. If there are more blades than one has paper for, close the unoccupied blades down in like manner. Close secure bar at head, raise lock and lower locking bar, which will automatically lock itself. A ledger with 12 blades can easily be filled in two minutes, and the sections from a ledger with 3-24 blades can be emptied in four seconds, which includes unlocking.

When filled, the "Hollington" Loose Sectional Ledger opens exactly like the old sewn ledger, perfectly flat. Although the sheets are not creased (there is no need for them to be so) looking at it as it lies on the desk it is next to impossible for anyone to detect it from the old-style account book. The back is perfectly round, and the only part that might attract attention is the lock. It is extremely neat in appearance, and a cavity of 1¼ inches will hold five quires of paper (15 blades). The back is level with the sides.

Inserting a Section. Closed. Open.

The Hollington Loose-Section Ledger.

The mechanism is made of a very lasting material, so there is nothing to get out of order, whilst the blades are made of the best cold rolled steel, the gauge being 8½ to the inch. The whole is of British manufacture.

We understand that Mr. Hollington is desirous of disposing of his Patent, and shall be pleased to put any of our readers in communication with him.

How to Criticise a Rebound Book.

Last June Mr. W. Elmo Reavis, the editor of *Bindery Talk*, read a paper on the above subject to the California Library Association, which is very practical and is prefaced by the following points, which we reprint here because of their interest to members of the boobkinding trade.

I.—Points First Noticed.

The source of genuineness and worth in a work of handicraft is, to the casual observer, often lost beneath what is chiefly superficial.

(a.) General appearance; whether clean; nature of surface.
(b.) Lettering, as to legibility.
(c.) Edges, as to colouring.
(d.) Opening, whether free or difficult; how book lies and stands; its "feel."
(e.) Appropriateness of end-papers.

II.—Essential Elements.—A Trinity.

1.—Workmanship—Noticeable in:
(a.) Proportion and balance of leather backs, corners, squares, lettering, joints.
(b.) Neatness of paring, turning in, glueing and pasting.
(c.) Even rounding of back, formation of joint and loose back; proper pressing.
(d.) Square trimming of book; proper margins.
(e.) Thorough even sewing; appearance of firmness coupled with flexibility.
2.—Methods.—To Secure Flexibility First:
(a.) Sewing.

Sewing on tapes has been commended by all of the best authorities on bookbinding, including the Sub-Committee of the Society of Arts (London), Douglas Cockerell, G. A. Stephen, J. C. Dana, A. C. Bailey, and A.L.A. Handbook No. 5. Sewing on sunken cords, whip-stitching and sewing lengthwise by machine, are almost universally condemned. The patent sewing through perforations (of which Chivers' stitch is the best known example), has won its way on merit. Of this, G. A. Stephen in a recent periodical says: "Necessity being the mother of invention, several binders who make a speciality of binding for libraries have invented special methods of sewing, with the object of overcoming the difficulties which beset binders when sewing books printed on paper of poor quality."

(b.) Tight back or loose back, which?
(c.) Distinction between "cased in" book, and bench-made book.
(d.) Attachment of boards; "split" boards.
(e.) Attachment of covering on to back; use of "tube."
(f.) Formation and attachment of end sheets and fly-leaves.
(g.) Corners, strengthening.
3.—Materials,—Their Selection:

The intelligent selection of materials is possible only when there exists a known and accepted standard of value which has been scientifically established. The United States Bureau of Standards developed a cloth standard, and this has given us Library Buckram. The same Bureau is at work upon Leathers, and its labours so far are said to confirm the "Report of the Committee of the Society of Arts on Leather for Bookbinding" (London, 1901-5), which has made the standard for English libraries—and now is making the standard for American libraries—"guaranteed acid free" leathers.

(a.) Suiting materials to book's intended use.
(b.) Boards.
(c.) Linings; "tubes."
(d.) End-papers and fly-leaves.
(e.) Cloths.
(f.) Leathers; the "acid free" guarantee.

The book bound perfectly for public library service is a product of specially trained craftsmen, employing only sound proven methods, and using wholly substantial materials. It is simple, neat, flexible, and above all, durable. Mr. Arthur L. Bailey, in his "Bookbinding" says: "A book may be said to be well bound when it is bound in a material suitable for the use to which it is to be put, in such way as to give the maximum amount of service, and when it is also as attractive in appearance as is possible with these two requirements."

Messrs. Samuel Jones and Co., 7, Bridewell-place, E.C., offer a fine selection of non-curling gummed papers in all shades and colours, the variety of which may be best judged from the neat sample book they send out. They have also special lines in blottings, cover papers, box and fancy papers, etc. The firm issues more than forty different sample sets of their varied stock of papers, and these should be seen by printers.

Famous Binders of the Past.

ROGER PAYNE.

By W. H. Fox.

Time and again has the author of the beautiful so-called "Roger Payne" style been praised as a workman, and as often pilloried as a man, and his life's history may be said to embrace the two extremes, as a man a failure, as an artist a genius, the rock upon which he split being his excessive love of drink, and to its baneful effects his life's failure must be attributed.

Looking at the portrait of this eccentric individual (a copy of which appears as frontispiece to Hannett's "Bibliopegia"), there is little to admire, and one looks in vain for any indication of that genius which we know he possessed, and readily endorses the expression, "surely genius has taken up with strange lodgings." Here, we see the man in the wretched room in which he worked, surrounded with squalor and misery, the requisites of his calling lying here and there. Himself, with hair unkempt, and clothes little better than rags; altogether a picture the very reverse of what one would expect, judging by the splendid work he is known to have produced. Nevertheless we have it on record, that the Countess Spencer's French maid, on calling upon him in reference to work for her mistress, was so overcome at the sight of the uncouth figure before her, that she fainted.

And this was Roger Pagne, a true artist, a workman (as described by F. Rogers in his "Art of Bookbinding," 1904), who, in a common-place age, loved for their own sakes beauty and sound principles in his work. And it might be added, gave his name to the one style of bookbinding that is essentially British. France, Italy and Germany each have their special styles and characteristics, but the "Roger Payne" style is as enduring as the books it adorns, which as much as ever rank among the prizes of the collectors and connoisseurs of bookbindings. English bindings of any pretentions to art were altogether in the background in the eighteenth century till the days of Roger Payne. It is admitted that good solid work had been before his time, but it remained for him to develop a purer taste, and in place of the unmeaning ornaments frequently lavished on books previously to introduce a series of classical, geometrical and highly finished designs and to elevate the Bibliopegic Art to a prominence before unknown in this country.

Payne was a native of Windsor Forest, and received the first rudiments of the art of binding from Mr. Pote, bookseller to Eton College, but about 1770 he came to London, and was employed by Mr. Osborne, of Holborn. Leaving him, he was started in business by Thos. Payne, of the King's Mews, St. Martin's, a gentleman who, though no relation, through the remainder of his life proved his friend. With ordinary care and attention to his business, with the class of customers his work attracted to him, he might have accumulated sufficient to have passed his days in comparative comfort; but his one failing wrecked his career. In his later years he appears to have been in partnership with a binder named Weir, who had the reputation of being an excellent workman, and whose wife is stated to be the best restorer of old books ever known, but his partner, like himself, was a regular dubbed "ale knight." One

singularity about these two men was the poetic vein they both possessed in praise of their failing, "Drink," examples of which are still extant.

While the style of his work was characteristic of the man, no less so were the bills for that work, many of them being largely composed of most unbusinesslike remarks, while the price generally charged, considering the work and time expended on it, we to-day would consider remarkable for its cheapness.

A Binding by Roger Payne.

An example of one of his bills will be sufficient; it was sent to Dr. Moseley: "Harmony of the World by Haydn, 1642, bound in the very best manner with white silk, very strong and will open easy, very neat and strong boards: fine drawing paper inside, stained to suit the colour of the book, the inside finished in the *Rosie Crucian* taste, very correct measured work, the Insides finished in the *Druid* taste, with acorns and S.S. studded with stars, etc., in the most magnificent manner, so neat, strong, and eligant, as this book is bound, the binding is well worth 13s., and the inlaying the Frontispiece, cleaning and mending, is worth 2s. To Dr. Moseley's great goodness, I am so much indebted, that my gratitude sets the price for binding, Inlaying, cleaning and mending at only £o 10s. 6d." Payne's chef d'œuvre was the binding of a copy of Aeschylus, 1795, and his bill for this job, set out at great length, amounted to £16 6s. 10d.

Another peculiarity of his work is the fact that he, either through want of means to employ a tool cutter or possibly the belief in his own ability to do it himself, invariably made his own tools, some of which were of iron, and while mostly of a simple nature, were in combination made to produce splendid results. He may be said to be unique in the manner in which the stop is used. Many of his designs are liberally sprinkled with dots, executed after the flowery part had been worked off; his side ornamentation was largely confined to the corners, which were connected by gauges to the border lines, and the backs very fully gilt (though the usual panel lines are absent), and the dot worked straight with the edge of the back. Payne's books were excellently forwarded, being sewn all along round bands with silk, and in the better class lined with leather. As a consequence they open with ease well into the back. In his later days there was a falling off of the excellence that had marked his earlier efforts, and, finally, borne down with disease, he breathed his last in Duke's-court, St. Martin's-lane, on November 20th, 1797, and at the expense of his friend, Mr. Thos. Payne, was interred in the burial ground of St. Martin's-in-the-Fields. Thus the register of St. Martin's records the last stage in the life's drama of one who, whatever his faults as a man, was, as a craftsman, second to none in the age in which he lived.

The example of Roger Payne's work which we illustrate is a volume (one of four) of the "Monasticon Anglicanum." It is a fairly characteristic one, and exhibits the sprinkling of dots alluded to, the general simplicity of the style, which yet contrives to appear striking and effective, the "dicing" of the surface of the leather, and the prolonged rectangular corner ornaments, which so often occur on Payne's bindings.

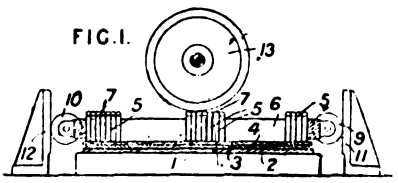
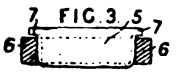
Some Bookbinding Patents.

A machine for impressing designs on leather, etc., of the kind in which an engraved, etc., plate and a travelling roller are employed, is, according to an invention by Messrs. J. Thomson and Co., constructed with a series of movable blocks, which are acted on by the roller, and serve to transmit pressure to the leather, so as to press it into contact with the plate, thereby preventing lateral shifting of the material and permitting of several traverses of the roller. As shown, the leather, etc., 3 is placed on a grain plate 2 supported by a fixed table 1, and an elastic sheet 4 is placed above the leather. Pressure is transmitted to the leather from a movable pressure roller 13 by means of a series of vertical blocks 5 with rounded upper ends 7 to avoid shock, the blocks being guided by grooves to move in a frame 6 provided with rollers 9, 10 abutting against frames 11, 12 to prevent lateral shifting of the frame. The frame 6 is adapted to engage the projections 7, Fig. 3, on

FIG. 1.





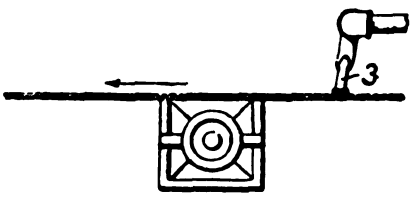


FIG. 3.

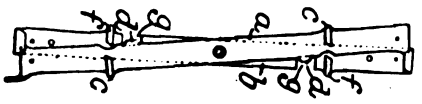


the blocks, so as to raise these off the work when desired. The roller 13 fits associated parts, or the table 1 may be movable so as to allow material of greater width than the roller to be operated on, and the blocks 5 may be pressed up from below. The frame 6 may consist of two end-pieces carrying rods threaded through slots in the blocks 5.

Paper with flexible portions suitable for ledgers having either loose or permanent leaves is, under a patent by Mr. P. Weston, produced on the wire cloth of a Fourdrinier machine, or on a cylinder machine, by sucking or blowing away portions of the pulp

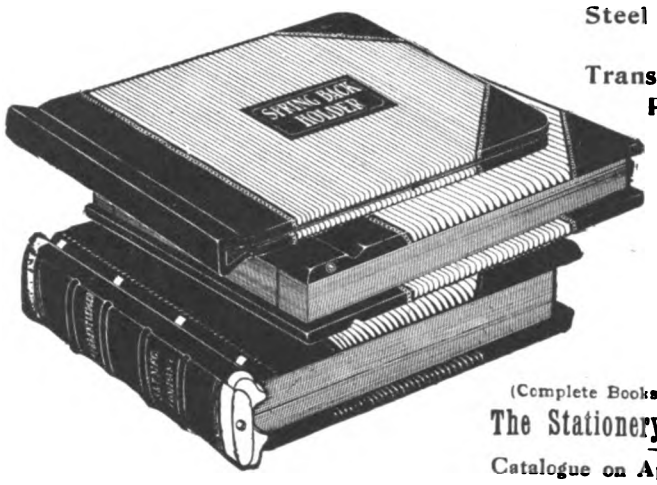
web at the part to be thinned. Fig. 1 shows the arrangement of a suction nozzle 3 in front of the suction box of a Fourdrinier wire; blowing nozzles may be similarly placed over the suction boxes.

An invention by Mr. E. G. Dow relates to devices for securing documents, etc., in a loose-leaf book, file, or temporary binder of the kind comprising two overlapping plates *a*, *b*, each of which carries filing-prongs, *e*, *f*, one of the plates being pivoted on the other

so that it can be turned to open or close the file. In order to limit the relative movement of the plates, a pair of recesses *g*, having inclined inside edges, are formed in one plate and are adapted to be engaged by projecting stops *d*, *d* formed integral with the other plate.

British or American?

SIR,—We have your letter of the nineteenth instant, and contents are noted.



We have not yet seen the letter from Riviere and Sons, referring to the illustrations in our pamphlet, as we await the receipt of this month's Bookbinding number of your journal. Recently the editor of the *Dial* called our attention to the fact that some of the illustrations used in this booklet were photographs of bindings executed abroad, and that our pamphlet would create the impression that we are intentionally trying to deceive by showing bindings in it other than our own. We would say that there is not a style of binding illustrated in this booklet that we cannot execute. Our idea in selecting the different styles was to give a variety, using these illustrations to show the various designs, and the booklet is, as the title indicates, a little dissertation on the "art of binding books," with, as is also stated on the title-page, "illustrations of fine bindings." It is true that we use it as an advertising medium for our own bindery, and as such we have shown, among the other illustrations, specimens of our own work, *but nowhere either in the text or by implication do we lay claim to all the bindings shown.*

Yours very truly,
TROW DIRECTORY, PRINTING AND BOOKBINDING COMPANY,

THIRTY-FIFTH YEAR.

VOLUME LXXIII. NUMBER 18.

LONDON: OCTOBER 23, 1913

EVERY THURSDAY. PRICE TWOPENCE.

Printers' Managers and Overseers ASSOCIATION.

LIVERPOOL AND DISTRICT CENTRE.

Costing Committee's Meeting.

The October meeting of the Liverpool Centre was held at the Hanover Hotel, Liverpool, under the auspices of the Costing Committee of the Federation of Master Printers. The President, Mr. Harry Firth, presided over an attendance of close on 70 gentlemen, including Messrs. Cecil B. Johnston (of York), Waterhouse (of Bolton), A. E. Goodwin (organising secretary of the Master Printers' Federation), Geo. Watson (vice-president, Liverpool Centre), Wm. Stephenson, C. Coates, C. Thomas, C. Russell, W. A. Guest, J. Honeyman, C. Slocombe, A. Fox, H. R. Caldwell, A. Burns, J. Ostell, S. H. Hannah, H. Conway, Jas. N. Poole, etc., etc.

The PRESIDENT, after giving a hearty welcome to all present, asked Mr. Cecil Johnston to open the proceedings.

Mr. JOHNSTON illustrated his remarks by taking from a book published three years ago by Mr. J. A. Wild, entitled "Cost of Production," four estimates for an identical job. The estimates were by firms paying £300 to £25,000 a year in wages, and the prices varied from £4 16s. 3d. to £14 8s. The job was 500 copies demy 8vo. booklet, 32 pages, long primer solid, one page cover. Continuing, Mr. Johnston said, there can be no unanimity in printers' prices so long as each printer is a law unto himself. One recognises that there will always be a variance of opinion, but we feel that there is only *one* cost system—that is, naturally, the right one. It is not so much a matter of cutting—because each man thinks he is on the right lines. If he is higher, he thinks his competitor is a fool. Its a matter of *all* trying to adopt one uniform system of *recovery of expenses*. (Applause.)

Mr. GOODWIN (Organising Secretary of the Federation of Master Printers) hoped that none had been frightened by the figures used by Mr. Johnston. He was glad the subject had been introduced in the way in which it had, because he had now some experience of Liverpool printers, and he was sure that they were not *knowingly* charging below their cost. He found that there were two classes of printers most difficult to move—the printers who have a system which has been running many years, and the printers who have no system whatever. It was rather more years than he cared to think since he first got up against this system. He vividly remembered the smiling indifference, almost amounting to passive resistance, with which the question was first viewed. But he could now count amongst his best friends those who, after a very little experience, realised that the costing system was going to be a help and not a hindrance. At similar meetings in London and Manchester he was quite frank in saying that some of them were altogether in sympathy with this movement, fully realising that there was nothing but honest attempt to improve the whole crowd. The costing system is the simplest that can be devised, and shows the cost of any department at any given period, the cost of every job that goes through the works, as well as a method of checking the rates upon which estimates are based. To work the system it was necessary to have some idea of departmental expenses. He had heard that the majority of printers did not keep any books at all. To that he could give the lie direct—but he had found offices carrying very expensive machinery, where they only kept a day book, and crossed off the item when the job was finished.

Mr. GOODWIN then dealt with the charts showing forms of Statement of Expenses, Cost of Production, Time Dockets, Job Cost Sheet, Value of Production, and Machine Work. Continuing, he said that, in a word, was the whole of this marvellous system. It was far more difficult to explain than it was to operate. It was nothing like so difficult as they might suppose.

DISCUSSION.

In the very interesting and illuminating discussion that ensued, such difficulties as the following were encountered and lucidly answered:—Did the system give any means of checking actual wages charged against each job? Did it show the actual quantity of ink, etc., to each job? Was it possible for *any* firm to pick up this system right from the very bottom? Did the system show, by actual illustration in text book form, how it was possible to apply it to the business? Was the system a Ready Reference, so that anyone may easily refer to it at any time?

Opinions were divided on the average hours per week to be allowed for the running of machines, some speakers saying 50—the Costs Committe 40.

Other points dealt with were:—Could the Costing Committee suggest a system of forms to be used as records showing items of departmental expenses? Details of factory books. Checking wages paid against wages charged. Percentages of depreciation showing items for checking. Recovery of overhead charges. The question of new material in connection with capital account. The question of the law of average. Making ready on machines and running time, what rule for charging large or small runs?

Mr. WATERHOUSE, of Bolton, was delighted to be at this meeting, because he had taken two or three meetings of master printers single-handed, and had come to the conclusion that they did not understand him, or that they were not interested in costing systems. He was sure this meeting was an inspiration to Mr. Johnston and to Mr. Goodwin on account of the keen interest displayed at question time, which was most interesting and most helpful, and assisted those who had the costing system at heart. He felt that the time was arriving when the printer would see a prospect of a return for his capital and his brains. There was no doubt that we had played too much into the hands of the customers. We must confess to great surprise at the manner in which rates have advanced in price, to say nothing of the increased railway charges which had to be faced. Had our prices increased proportionately? Some large buyers had remarked that printers were the most gullable people on earth; and he was beginning to think there was some truth in the remark, for he had had it reported of a well-known firm that on no account was a certain order to be allowed to pass—"Let us know our competitor's price and we will reduce ours by £20." Another instance was in his own experience where £128 had been estimated for a job and two competitors respectively tendered £93 and £84. In this case the customer was a firm having a man as buyer of the whole of the printing. This person asserted that the £128 estimate was a ridiculous quotation; and he returned it with a note something like this: "I don't know what's wrong with your estimate department. There must be a leakage somewhere. How you get business I don't know. It is about time you changed your staff." He sent this to the £128 firm because he didn't think the other two (the £93 and the £83) firms could be wrong, seeing that he had also received another price for £62! What had he done? He had placed the order with the £62 firm! "And have you had sample of paper?" he was asked. "Yes—and discovered that it was lighter than specification," he replied, "and I told them so; in which case they said the job would be £3 cheaper. So I'm getting the job for £59!!!" Comment is superfluous when it is known that the paper for this job could not be bought for less than £50; on top of this, the job was full of illustrations and was to be in four colours and gold bronze."

Mr. WATERHOUSE said that some time ago the chairman of the firm he was with previously placed in his hands a book dealing with a system of costs, with the remark that something might be done on those lines in their establishment. After reading through that book, Mr. Waterhouse came to the conclusion that his firm had no system at all. He studied the question for six months, and then started a new term with a system of costs which had been in operation at Alf Cooke's. They discovered that most jobs that managers of departments thought were gold mines—on a true system of costs—were not at all so profitable, and that on other jobs on which they thought they not were making profit they were losing. This necessitated recharging to the customer—which in some instances meant the loss of a customer. When the system was put in the heads of departments felt that it was going to tell against them. There was a dinner on the subject, at which everything was thoroughly explained, with the result that at the end of six weeks' time there was not one who would have gone back on the old system—they became as enthusiastic over the costing system as he was himself.

They wanted a correct system to prevent unscrupulous buying as well as unscrupulous dealing. The Costing System enabled the printer to do so; indeed it enabled the printer to look into the future and so gauge his work that he was able to tell exactly what he could accomplish in a given period. Mr. Waterhouse concluded by saying that at the present time printing was truly a fine art, and he thought all would agree that a true system of costing would be helpful. If every one would adopt the costing system, he declared that in three months time they would kick themselves for not having known more about their own business.

Mr. Fox said he would recommend that a charge be made for estimates, and that no free sketches should be submitted.

Mr. WATERHOUSE spoke against free sketches, and said sometimes the preparation of sketches in the aggregate by the many firms quoting cost more than the job.

Mr. GOODWIN: Under the Cost System *all* costs are recovered. So long as these variations are going on so long will you have the foregoing state of things. Under the

Digitized by Google

Cost System, customers are beginning to find out that its no use sending for estimates because all the printers charge alike.

The discussion was smartly conducted, and Messrs. Johnston, Waterhouse, and Goodwin were freely plied with questions and recommendations.

Mr. WM. STEPHENSON, in proposing a vote of thanks to the speakers, said, it was with very great pleasure he had listened to the speakers that night, although he did not exactly see eye to eye with them on several things. He felt very strongly that the consumers of printing should not have the advantage of the expensive typesetting and printing machines; the benefit derived from them belonged to the employer. On behalf of the Centre he moved a hearty vote of thanks to Messrs. Johnston, Waterhouse, and Goodwin.

Mr. A. BURNS, in seconding the vote of thanks, said, as foremen and overseers, they knew what it was to quote for a job, and how they felt when the job went elsewhere. There were many things operating that all could not see—wheels within wheels—which compelled employers to take jobs; and there were certain reasons why certain people placed jobs with particular people. The Costing System would be beneficial to all concerned.

Mr. JOHNSTON, replying, said it was essential to have the sympathy and co-operation of the heads and of the staff, and it was vitally important that they understood the lines upon which the Costing Committee wished to go. It was not getting at the men or the overseers. It was not a war against the consumer—consumers did not object to pay a reasonable percentage.

Mr. GOODWIN said it was one of the most interesting meetings he had attended. He would be always willing and ready to assist to work the Costing System, and was quite sure that the good influence of that meeting would extend to the masters, and that improvements would take place in Liverpool. He would like to propose a vote of thanks to their president, Mr. Firth, whom he met a couple of days ago, and recognised in him the right gentleman to preside over a meeting of managers and overseers; and also to Mr. Poole, their secretary, for the manner in which he had arranged for the meeting that evening.

Mr. FIRTH, in reply, said the prices in every trade but printing were advancing, yet the vast amount of skill and worry in connection with printing was most inadequately charged for. The employers by becoming better acquainted one with another, and taking their managers and overseers into their confidence, would soon find the remedy.

At the conclusion of the costing meeting, the ordinary business meeting of the Centre was held. The minutes of the previous meeting were read and passed, and several questions asked in regard to the Death Benefit Fund.

The business on the agenda completed, the President, Mr. HARRY FIRTH, said he had a very pleasing duty to perform; they would remember the vast amount of work their secretary, Mr. Poole, had put in for a considerable time in assuring the success of the United Meeting, on June 21st last. That meeting had been a very great success, and the Council fully recognised the work and energy which had conduced to that success, and on their behalf he had pleasure in handing to Mr. Poole a gold pendant for his watch chain as a token of their appreciation.

Mr. GEORGE WATSON, the Vice-President, said he fully endorsed every word the President had said about their secretary, who had put so much energy into the United Meeting that at the close of the proceedings he broke down in health.

Mr. POOLE, on receiving the pendant, said that it came to him as a very great surprise; in fact, he might say it was not fair that any man should receive such a shock without warning. With regard to the United Meeting, he had done what he considered his duty, and that was to maintain the position of the First Centre. This would have been impossible without the whole-hearted help of the officers and council, who had all worked along with him. He had felt amply rewarded when he received the letters from the chief officials of the Parent and other Centres stating what a success the United Meeting at Liverpool had been. However, he tendered to his colleagues on the executive his best thanks and hoped his hat would not be too small for him to go home in.

The Colour Printer and Christmas PUBLICATIONS.

The approach of Christmastide brings us many reminders of how busy the colour printer has been during the preceding months over work intended for the amusement and edification of the public. He has been aided by the skill and industry of many allied branches of the printing trade, and according to the manner in which he has adopted and made use of the best available methods and materials, so does his work show a progressive smartness and up-to-date finish that pleases his patrons and brings prosperity to his business. The perfection of modern artistic reproduction is nowhere better exemplified than in the publications issued by the well-known artistic colour printers, Messrs. C. W. Faulkner and Co., Ltd., 79, Golden-lane, E.C., and this year they have produced some beautiful things in Christmas cards, calendars, panels and studies, that will well maintain their high reputation among the purchasing public.

Their Christmas cards are in greater variety this year than in any previous year, ranging from 1d. to 1s. each, and they are reproduced in various styles of colour and black and white, including a special range of hand-coloured and floral cards, comprising altogether over 1,000 designs. Their "Mayfair and Remembrance" series of private Christmas and New Year cards are handled by all the leading stationers, and this year's unusually fine collection will be much appreciated. Every taste has been provided for in a remarkably wide range of designs, embracing all shades of sentiment from serious to gay. Excellent value is given alike in the low priced and the more expensive lines.

Of calendars there is an immense variety, and the collection includes 250 styles of turnover, monthly block, and novelty calendars, from 6d. to 10s. 6d. each, while the daily tear-off calendars, the "Shakespeare," "Great Thoughts," "Divine Thoughts," "Remembrance," and "Witty Thoughts," bearing landscapes, seascapes and figure studies, are of the best the firm have ever issued. Throughout these calendars are printed and manufactured at the firm's Golden-lane factory in London. Some typical lines are "The Shakespeare," four-sheet turnover calendar, illustrated with scenes from Shakespeare's plays, by T. C. Dugdale and Chas. A. Buchel, beautifully reproduced in rich colour. "The Children's Pets" is a three-sheet turn-over calendar, bearing dainty kitten and dog studies by A. Augusta Talboys, reproduced in gravure. Another three-sheet turnover calendar, "At the Party," has amusing children studies by Agnes Richardson, reproduced in bright colours. There is also a monthly engagement turnover calendar with twelve sheets, spaces for daily engagements being provided. A blotter calendar bearing a charming study of a girl's head in gravure is another attractive style. The above range from 3s. 6d. to 1s. calendars. There is a nice selection of shilling block calendars. The Boudoir Daily Tear-off Quotation calendar consists of a charming river study, exquisitely coloured by hand. Among other shilling block calendars there is a series called "Divine Thoughts," including a gravure picture of the Good Shepherd by Kehnen, and a hand-coloured gravure view of Lake Como by J. McWhirter, R.A. There is also the "Shakespeare" series, with fine pictures illustrating the plays, the "Great Thoughts" series, with a pleasing variety of figure and scenic studies, and the "Witty Thoughts" series, with humorous pictures, and in connection with which prizes are offered for the best joke or funny story sent in before March 31st next. On each of the tear-offs is a suitable quotation, carefully selected, for every day in the year, and on the latter calendar a delightfully humorous quotation or anecdote appears on the tear-offs. An ideal calendar for children is the Golden Thoughts for Little People series, containing simple passages from the Bible, hymns, songs of nature, and sweet verses on many subjects for each week in the year, with notes on birds and wild flowers from White's Natural History of Selborne. In addition to the above we may mention the Sixpenny Panels with gold bevelled edges, the range of which has been further increased to 116 new and beautifully printed designs by well-known artists, printed either in colours or gravure, each calendar being fitted with a strut and supplied in a strong envelope.

Messrs. Faulkner hold a deservedly high reputation for pictures splendidly reproduced from paintings by well-known artists. The selection is an extensive and varied one, and is continually being added to. Four charming landscape studies bearing the artist's name have just been published, faithfully reproduced in colours from the paintings by A. de Breanski. The size of these pictures is 17¾ by 13¾ inches, and mounted artistically on grey multiple mounts, and published at 16s. the set of four, they form an admirable present.

Detailed particulars of all the above and other attractive lines are given in the firm's large and fully illustrated catalogue for the season 1913-14.

Austria-Hungary.

Imports and Exports of Paper.

The year 1912, reports the British Consul-General (Sir F. W. Duncan, Bart.), began well in the Austro-Hungarian Monarchy, but closed with severe depression both industrial, commercial and financial. The outbreak of the Balkan War was no doubt the chief cause of the set-back, but it is possible that the period of the boom would not have lasted very much longer in any case, as there were certain unhealthy features about it which were recognised long before the war began. The international shortage of money came to be felt severely owing to the adverse balance of trade and payments, which had been increasing ever since it began in 1906.

Dealing with the paper trade the report states that the imports of paper and paper goods into the Monarchy were as follows:—1912, £1,620,000 (an increase of £134,000 over 1911); 1911, £1,486,000; 1910, £1,491,600. Exports: 1912, £1,629,000 (a decrease of £29,000 over 1911); 1911, £1,658,000; 1910, £1,790,000.

Trade in paper between Austro-Hungary and the United Kingdom was as follows:—Paper from United Kingdom: 1912, 394 m. tons; 1911, 321 m. tons valued at £31,490; 1910, 258 m. tons, £15,360. Austria-Hungary paper exported to United Kingdom: 1912, 7,175 m. tons; 1911, 6,830 m. tons valued at £85,900; 1910, 6,443 m. tons, £83,600.

Austro-Hungary exported in 1912 5,535 m. tons of paper to British India, compared with 4,762 m. tons, valued at £65,520, in 1911, and 5,315 m. tons of the value of £81,200 in 1910.

The Printing Trades Exhibition

AT AMSTERDAM.

(From our Special Correspondent.)

II.

Resuming my tour of the Machinery Hall, I noted Messrs. Steinmesse and Stollberg, of Nuremberg, showing litho printing machines both for hand and power, and also their stone-grinding machine.

The Macshinenfabrik Johannisberg, of Geisenheim, were represented by their agent, Mr. H. B. Ijdo, of The Hague, and by one of their "Perfect" machines. The well-known "Victoria" platen of Rockstroh and Schneider, of Dresden, was on view at the stall of Mr. J. E. Stolberg, their Dutch representative.

The largest collection of machinery was staged by the Amsterdam Typefoundry, who are agents for many important firms. Brehmer's bookbinding machines; the Babcock "Optimus" with the "Dux" feeder, a mechanical (not pneumatic) attachment; the machines of the Chandler and Price Co. and the Augsburg Machine Co., together with the cases and other woodwork of the Hamilton Manufacturing Co., were all shown by this firm. Karl Krause's paper cutting machines are also handled by them, and one of the most striking exhibits was a three-sided cutter for books, which automatically trims all three edges at one operation.

Pneumatic feeders were shown on several machines, notably on an "Albert."

The Dresden Schnellpressen Fabrik showed a fine "Planeta" press, which received a gold medal.

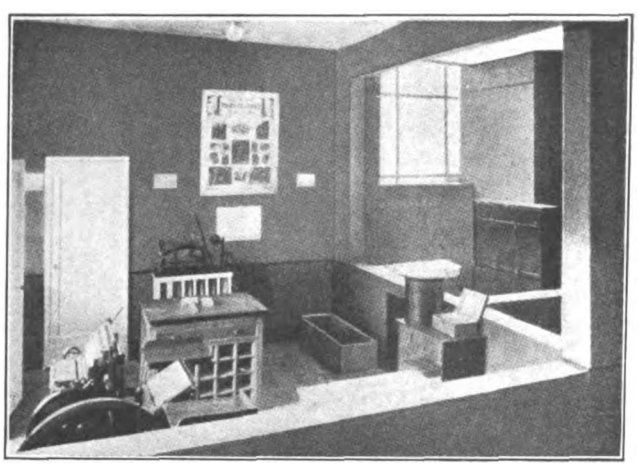
Messrs. Klimsch, of Frankfurt, and Messrs. Penrose and Co., of London, were the principal exhibitors of photo-engraving apparatus and materials. Stereotyping and roller-casting plants were shown by Messrs. Winkler, Fallert and Co., of Berne.

Two schools of printing exhibited specimens of their work, *i.e.*, the one at Utrecht and the Leipzig School. The specimens from Utrecht were mounted on a dark grey paper, and comprised both letterpress and colour work. This school has day classes, and is not limited to apprentices. A Specimen Book is issued annually. The Leipzig School (Königliche Akademie für Graphische Kunst) showed worthy specimens of three-colour work. These were good, but the few specimens of ordinary letterpress did not strike one as being in the first rank.

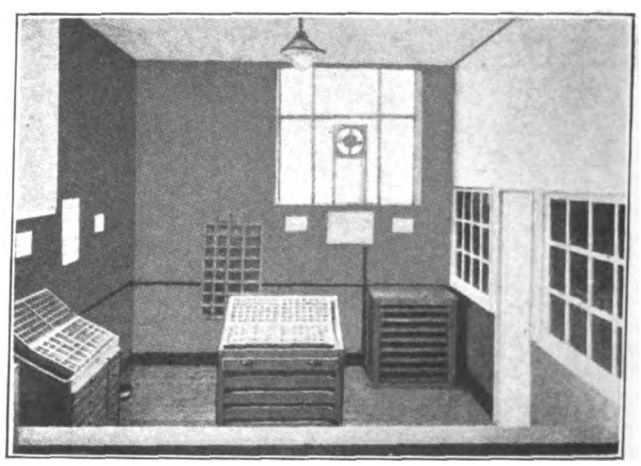
Printing inks were shown by the firms of E. T. Gleitsman (Dresden), Beit and Co., P. van Son and Co. (Deventer), and Kast and Ehinger, and printing and litho rollers by Beit and Co. (who, though a German firm, have a factory in Amsterdam for making rollers), C. Schmautz, of Paris, and O. Swanten, of Amsterdam.

Special attention may be drawn to the exhibit of the Vereeniging tot Bevordering der Gezondheit in de Grafische Vakken (Society for Promoting Hygiene in the Printing Trades). They fitted up two printing offices, one non-hygienic and the other hygienic. The contrast is very striking, as may be seen from the post cards published in connection with the show, and reproduced herewith. Even in this country there are many printing offices that might profit from this object lesson.

Finally, I may refer to the publishers' exhibit, which took the form of a library of about 5,000 volumes recently issued by the various publishing firms in the Netherlands. All the journals published in the country were also shown, and the reading-room was open to all visitors to the Exhibition. There were a few exhibits in connection with bookbinding, some notes upon which appeared in the Bookbinding Section of our issue of October 16th.



A Typical Non-Hygienic Printing Establishment, arranged as an Object Lesson by the Dutch Society for Promoting Hygiene in the Printing Trades.



A Typesetter's Experiment.

Many, many years ago, says a writer in the *American Printer*, long before a typesetting machine of any kind was in operation (excepting the old Alden, which was not a success), when I was studying all possible methods of increasing my speed at the case, I tried one that was at least novel and may be worth while at this late day, especially to the young printer who hopes to rise to the top as a compositor. This experiment consisted of picking up two letters at a time instead of one, thus cutting the movements of the arm down one-half. The experiment was only partially successful as far as related to speed alone, but it certainly reduced the actual muscular labour very materially, while the rate of composition per hour was as high, and perhaps a little higher than by the other method. Any compositor can try it for himself, and after a little practice will, I am sure, attain as much or more than his ordinary speed.

For example, take the word "that." Instead of first picking up the letter "t," take the letter "h," holding it a little back from the ends of the fingers; then follow with the "t." Both of these letters can be placed in the stick almost as quickly as one—the "t" first and then the "h," and so on. For the word "the," which occurs so frequently, take the "t" and the "h" in the same manner, following them with the "e" alone and then the space, as these two types are not so readily handled together as two full-length letters. So, too, it is not desirable with such a word as "upon" to take the "u" and the "p" together, as their situation in the case would prevent any gain in the hand movement. After a little practice the selection of proper letters the doubling of which will result in gain in speed, or at least in not retarding it, will become mechanical and require no special thought by the compositor, while the conservation of muscular energy in the right arm will be of considerable importance. At the worst any young compositor will, I am sure, enjoy the experiment.

While upon this subject of typesetting speed I may be permitted without boasting, to note that many years before stands, or frames, were built so as to bring the cap case partly forward of the back side of the lower case and nearer to the compositor's hand, I made a device from malleable iron which accomplished the same object with the old-fashioned stand. It consisted of a peculiar shaped iron that fitted tightly upon each end of the lower case, while the lower edge of the cap case at each end fitted into a wide slot in the upper end of the device, the shape of which brought the cap case to the position it now occupies on the improved stands. A number of these attachments were made and used in the newspaper office where I then worked, more than forty years ago, but I was a mere boy then and the improvement went no further at that time.

In AMERICA

There is published only one weekly paper representative of the interests of employing printers. It is the most popular Printers' Paper read in that country:—

Because it is the Trade Business Journal.
Because it has a splendid news service, with twenty-two paid correspondents.
Because it deals with the practical always.
It is the only Paper which holds the attention of the man who owns the plant.
The PRINTING TRADE NEWS does not attempt to teach printers to set type, but it is the foremost authority on the latest efficiency methods, the organization activities, progress in cost system work, approved methods of printers' advertising and anything and everything that tends to make the printing business a pleasant and profitable one.

It is pre-eminently the trade journal English machine builders should use to make their product known in America.

We have good mechanics. Let us have good business men. Let the NEWS come to YOU every week. Europe $5.00 per year; Canada $3.00. 64 pages weekly.

The Bodoni Centenary Celebrations.

The festivities in commemoration of the centenary of the death of Giambattista Bodoni, the celebrated Italian printer, brought together a representative gathering of Continental notabilities associated with print and paper, the absence of any officially accredited delegate from our own country being rather marked.

On Saturday, September 20th, there assembled at the "Borgo Mediœvale," at Turin, on which has been placed a tablet commemorative of the occasion, a large crowd of interested visitors and officials, including the Under Secretary of State for Public Instruction, the Prefect, Syndic and Questors of Turin, many journalists, artists, and members of the printing and allied trades, who listened attentively to the inaugural discourse of Cav. Vigliardi-Paravia, President of the Centenary Celebration Committee. In a neat speech, he gave thanks to all those who had assisted to bring into being the "Museum of the Book," and thus permanently preserve one of the most striking and interesting features of the late Turin Exhibition. Sig. Paravia modestly omitted to mention his own exertions, but his services were duly recognised by the next speaker, the Syndic or Mayor of Turin. He was followed by the official orator at the ceremony, Com. Pietro Barbera, who dwelt at some length on the importance of Bodoni's work, and the lessons modern typographers could learn from it.

The Museum being then declared formally open, the visitors made their way into it, to inspect the Bodoni exhibits. It is intended that the institution shall serve a somewhat similar function to that of the Technical Library of our own St. Bride Foundation, *i.e.*, constitute a centre where members of the printing and allied trades can consult technical and historical literature relating to their industries, and files of trade journals from various countries, including of course the *British and Colonial Printer and Stationer*.

When the speechmaking was resumed, the Under-Secretary for Public Instruction paid his tribute to the memory of Bodoni, whom he designated one of Italy's greatest sons. At the banquet in the evening there was a very large attendance, and a number of speeches were delivered, including one by Dr. Ludwig Volkmann, President of the International Exhibition of the Graphic Arts to be held at Leipzig next year. Sig. Giolitti, the Italian Premier, sent a telegram regretting his inability to be present, and wishing success to the Centenary festivities.

At Saluzzo, the printer's birthplace, on the Sunday morning, a large proportion of the inhabitants turned out to welcome the party from Turin. A procession was formed at the station, and proceeded to the Piazza where Bodoni's monument is situated. Arrived there, the commemorative bronze tablet placed upon it was unveiled and formally dedicated by Com. Pomba. His little speech on the occasion was fittingly responded to by Cav. Craveri, Syndic of Saluzzo, who promised that the utmost care would be taken of this latest addition to the town's artistic records. After the visitors had partaken of refreshments at the Town Hall at the invitation of the Syndic, a move was made at 10.30 to the great hall, where the commemorative address was delivered by Com. Rinaudo, in the presence of a large gathering. He recapitulated the principal facts in Bodoni's career, mentioned some of his most famous typographical works, and recalled a few of the many tributes of admiration that had been bestowed upon him and them from Benjamin Franklin's time onwards. Com. Rinaudo concluded an eloquent discourse by expressing the hope that the memory, like the art of Bodoni, would never perish. The Market Hall had been converted into a banqueting pavilion with the aid of elaborate decorative draperies, and a bust of the printer was not forgotten. Here a banquet was served to the assemblage of Bodonian enthusiasts, Cav. Vigliardi-Paravia being in the chair. Amongst those who delivered speeches on the occasion was Sig. Gio. Lobetti-Bodoni, a printer at Saluzzo, who still carries on the typographical traditions of the family. The visitors afterwards inspected various places of interest in the town, and finally reached Turin again at 10.30 p.m., after a long and busy day.

Nevertheless, they were up betimes on Monday morning, which was devoted to a visit to the lately constituted Royal School of Typography, and the unveiling of a bust of Bodoni in the Conference Hall, which is further ornamented with a bust of Gutenberg, and those of Signori G. Barbera, a famous Florentine publisher; G. Pomba, an equally well-known Torinese publisher; Cav. G. Levi, director of the important local type-founding firm of Nebiolo and Co.; and Cav. A. Lobetti-Bodoni. The bust of Bodoni is by the sculptor (Prof. Cav. G. Ambrosio) of his monument at Saluzzo, and after unveiling it Sig. Vigliardi-Paravia, the president of the School, presented the professor with a Diploma of Merit. Several other short speeches were delivered, and at the banquet which followed there were still more. Amongst those who spoke then was Com. Barbera, president of the Italian Typographical Association, who paid a deserved tribute to the good work done, in connection with the Centenary arrangements, by Sig. Vigliardi-Paravia. In conclusion he asked them to drink not only to the memory of Bodoni himself, but also to that of his wife, Paola Margherita Dell'Aglio, whom he described as a worthy companion for such a man. The three days proceedings were brought to a fitting close by a speech from Cav. Uff. Alberto Lobetti-Bodoni, who thanked those present, in the name of all the descendants of Bodoni, for the honours conferred upon the memory of their famous ancestor.

Although Turin was the centre of the Bodoni Centenary Celebration, Parma, where the printer actually lived and worked for some forty-five years, was not behind in testifying appreciation of one of her most celebrated citizens. On September 29th a Bodoni exhibition was opened at the Biblioteca Palatina, and a deputation from Turin was

Giambattista Bodoni, 1740—1813.

From a painting in the Communal Library at Turin, ascribed to G. Lucatelli.

received by the Syndic of Parma and a local committee. More of the inevitable speeches followed, a commemorative address being delivered by Professor Umberto Benassi. The equally inevitable Vermouth d'onore having been duly imbibed by the thirsty visitors, the heads of the Parmese and Torinese Committees congratulated one another —and incidentally honoured Bodoni in the doing — with the aid of further speeches. At 2.30 p.m. the party proceeded to the Cathedral, where, by permission of the Archbishop and Chapter, there was still more speechifying, and a commemorative bronze tablet was unveiled on Bodoni's monument, which is a large mural tablet, bearing a long Latin inscription, and surmounted by a bust of the printer. That typographer's skilful punch cutter, Amoretti, to whom much of his success was due, has also been honoured, a stone to his memory being dedicated in the Church of St. Pancras.*

The centenary festivities were taken a good deal of notice of by the local press, *La Stampa* (Turin) of September 22nd devoting a couple of columns to the subject, and reproducing several photos of the proceedings at Saluzzo. Several other papers also gave a good deal of space to reports of the proceedings.

Amongst the numerous literary memorials of this historic event we may mention, first of all, the official booklet of the Centenary Committee, "Nel Primo Centenario della Morte di Giambattista Bodoni," 85 pp. royal 8vo., including a portrait of Bodoni, a reproduction of his medal of 1802, and several typographical facsimiles. It comprises four monographs, *i.e.*, "The work of Bodoni," by Sig. T. Grandi; "The Reform of Typography," by Sig. C. Rutta; "Bodoni and the Art of Printing in Italy," by Sig. G. Busnelli; and "The New Renaissance," by Sig. A. Malacrida, the latter dealing with the aims and aspirations of modern Italian typography. These various interesting notices throw much light on Bodoni and his influence on the printing of his times, and incidentally provide some sound criticism of his work and methods. The Royal School of Typography at Turin has just started the publication of a trade periodical, *L'Arte Tipografica*, and the principal article in the first number (September, 1913) is appropriately devoted to a consideration of Bodoni and his typographical work, illustrated with several facsimiles of title-pages, etc., and prefaced by a portrait of that printer, which we reproduce herewith on a smaller scale. There are also two or three other and shorter contributions dealing with the same subject from various points of view.

From a pictorial standpoint, the Bodoni number (April-September) of *Archivio Tipografico*, the beautifully illustrated "house organ" of the Augusta Co. at Turin—a leading Italian printers' supply house—stands well out from the other contributions to the literature of the Centenary. The lengthy biography of Bodoni, by Sig. Gianolio Dalmazzo, which it contains is elucidated by seventeen fine plates, including reproductions of several portraits of the printer; pictures of his monument in the Cathedral of Parma; of the stone covering an urn in which—according to the usage of the time—his heart and viscera were deposited for sepulture in the Church of San Bartholemew at Parma, and a curious contemporary print, "A Conversation at Bodoni's House," in which the printer's wife is represented as playing the guitar, whilst her husband is apparently discussing with his friends the details of some piece of typography. This Part also contains biographies of Bodoni in French and Spanish.

Amongst other publications issued in connection with the Bodoni Centenary we may mention a short monograph by Sig. Barbera, published by Formiggini at Genoa; a notice of the printers' family, issued by the Bodoni establishment at Saluzzo; a biography of Bodoni, published by Battei at Parma; another, issued by Bovo at Saluzzo, and a monograph issued by the School of the Book at Florence. No. 56 of *Piemonte Grafico*, Turin, also had an article on the subject, with a portrait of Bodoni.

The most elaborate literary memorial of the Bodoni Centenary is the book lately published by Messrs. Bertieri and Vanzetti, of Milan, entitled "L'Arte di Giambattista Bodoni." It is a 4to. volume of 172+52 pages, finely printed on deckle-edged paper from the Maslianico mills, with old-style type of Bodonian character, the general get-up of the book being also on Bodonian lines, *i.e.*, it has exceptionally broad margins, page numerals below the text, and covers of boards, decorated with the quaint flowered paper, in three colours, that was common in Bodoni's day. In fact in all respects it is a desirable volume to possess.

About a fourth of the book is occupied by a biography of Bodoni, by Com. Professor Guiseppe Famagalli, a member of a family well known in connection with Italian typography. The Professor has done his work well, and whilst fully appreciative of Bodoni's talents, does not unduly magnify his other qualities, nor attempt to conceal or gloss over his obvious shortcomings. What these were can be gathered from a remark made by Firmin Didot, the eminent Parisian typographer, in 1799, "His (Bodoni's) books will no doubt rank high in the collections of amateurs, but they will be excluded from those of men of letters. As a literary man I must condemn his publications, though as a printer I admire them." It is indeed hardly necessary to say that the mantle of Aldus and the Estiennes had not descended on Bodoni, whose somewhat limited education unfitted him to successfully play the part of editor of the many classical works which issued from his press. Hence the numerous errors of which the critical savants of his day so often—and all too often justly—complained.

Bodoni was seen at his best in his printing establishment, for he was a true artist in type, and this brings us to the second and principal part of the volume under notice, *i.e.*, "*L'Arte*" proper. It has been compiled by Sig. Raffaello Bertieri, a member of the firm which publishes the book, and goes very thoroughly into all aspects of Bodoni's typographical work. A monograph on a subject of this kind would be of little service if not fully illustrated, and in the present instance there is an absolute wealth of illustration, no less than ninety facsimiles of types, specimen pages, titles, etc., elucidating the text. Twenty-five of the best of these are in a separate section at the end of the volume, with the appropriate title of "Monumenti Tipografici Bodoniani." The whole subject is indeed exhaustively handled, and by including upwards of a score of facsimiles

* Sig. U. Benassi has lately published at Parma a little book dealing with the connection between Bodoni and Amoretti.

Digitized by Google

from Italian, French and English (Baskerville) books printed in the eighteenth century, from 1727 down to the period of the dawn of Bodoni's fame as a printer, Sig. Bertieri enables the reader to see what that typographer owed to his predecessors and contemporaries in the art, in designing his new founts, and what posterity owes to him, in the same direction. Our modern "private presses" do not, it is true, deign to notice Bodoni's faces, mostly preferring to seek their typographical inspiration in the work of a period three centuries earlier, but nevertheless there is, in many of Bodoni's books, a combined simplicity and grandeur which might well serve as a model for the fine printers of our day. As a designer of title pages from type alone he stands probably unrivalled even now, and it is to be hoped that our Schools of Typography will procure copies of the volume under notice, if only for the series of facsimiles it contains, really fine examples of typographical "lay-out" without the aid of ornaments, borders or vignettes, these accessories being but seldom used by Bodoni.

Quite apart, however, from its practical utility from such a standpoint, the book is a worthy monument to the memory of a great printer and must take rank as the standard work on the subject. It is prefaced by an excellent portrait of Bodoni, from a painting by Andrea Appiani, bequeathed to the Royal Gallery at Parma by the printer's widow in 1844, and also contains a remarkably fine facsimile of a letter from him to a brother typographer. A remittance of 9s. 8d. to the publishers, at 51, Via Tadino, Milan, will secure the dispatch of a copy, carriage paid to practically any part of the world.

In conclusion, we have to express our acknowledgments to Cav. Vigliardi-Paravia for kindly sending us copies of the most interesting literary items published in connection with the Centenary Celebration.

The death has taken place at Edinburgh, of Mr. Thomas Bradford, the proprietor of the establishments known as George Cooper and Co., manufacturing stationers, 40, Niddry-street, and Fife and Co., educational publishers, of the same address. Mr. Bradford served his apprenticeship in the business of which he eventually became the owner, and it is a curious coincidence that on the day of his death he completed fifty years of his business career.

Printing Machine Troubles.

An Echo of a House of Lords Case.

In the City of London Court, on Friday, before his Honour Judge Lumley Smith, K.C., Messrs. Furnival and Co., Ltd., printers' engineers, Clerkenwell-road, and Reddish Iron Works, Stockport, Lancashire, sued Polsue, Ltd., printers, Gough-square, Fleet-street, E.C., for £20 14s. 9d., balance of account due for a printing machine supplied. The claim was admitted, and the money paid into Court. Defendants raised a counter-claim for £17, and it was that which was now adjudicated upon. Mr. Eric Maxwell appeared for the plaintiffs, and Mr. Stikeman for the defendants. Mr. Stikeman said that some time ago the defendants purchased a large printing machine of the two-revolution type. It was prior to 1908. The machine had given the defendants a great deal of trouble. It was sold as a quiet machine, and it was held by the House of Lords to be a nuisance when they worked it at night. The runners were wearing badly in 1908, and the attention of the plaintiffs' then manager was called to them. Defendants had bought the machine on the hire-purchase system, and owing to their litigation to the House of Lords they did not pay regularly. But they always paid interest on their arrears. The machine smashed badly, and defendants asked plaintiffs to repair it. That cost £68, and defendants' case was that when that was settled it was agreed by Messrs. Furnival that they should have an allowance of £17 because of the undue wear of the runners. Mr. G. L. Polsue, defendants' managing director, said that the runners gave rise to grievances soon after they had the machine. The litigation over the machine was very costly. Judge Lumley Smith said he liked to see a man who had fought a case to the House of Lords. The case itself was interesting, as defendants were allowed to use the machine in the day, but not at night. Of course a man could not go through the Divisional Court, Court of Appeal, and House of Lords without losing a good deal of money. Mr. Maxwell said that Messrs. Furnival's manager was dead, and there was nothing in writing referring to any suggested allowance. Plaintiffs knew nothing about it, and did not think it was made. The machine broke down because defendants kept it badly. Mr. Polsue said that was not so. Judge Lumley Smith said that defendants should have deducted the £17 from their payment of £68. Mr. Polsue said the reason that was not done was because it was decided to wait until the whole matter was settled up. Mr. T. Polsue, a director, corroborated. Mr. W. Powrie, the present London manager of the plaintiffs, said there was no agreement arrived at to allow the £17 as alleged. It was very unreasonable of the defendants to expect it. Judge Lumley Smith found for the plaintiffs on claim and counter-claim, with costs. He dared say there was some conversation about the £17, but it was not proved that the plaintiffs ever agreed to take it off.

A new adhesive paste has been put on the market by Messrs. Henry Roberts, Ltd., 61, Albert-road, Middlesbrough-on-Tees, under the name of "Pastoid." It is a pure white substance of excellent adherent qualities, spreads freely and evenly, and is strong enough to stick the commonest brown paper if required, while it is equally handy for mounting photographic prints, which latter use it is eminently suitable for, being of a pure quality and free from acids. "Pastoid" is neatly put up in wide-mouth glass jars with polished nickel screw caps, and is an excellent line for the stationer to stock. It is put up in sixpenny and shilling sizes.

In the Chancery Division, on Friday, in the action of Lund *v.* The Amalgamated Society of Dyers, Bleachers, Finishers, and Kindred Trades, and others, the plaintiff, as a member of the Society, sought a declaration that the application of a trade union's funds for financing the *Daily Citizen* was *ultra vires*, and an injunction to restrain funds being so applied. Counsel representing the trustees of the Society said from the rules such an investment was not authorised, and, accordingly, the £250 invested had been repaid to the trustees. There was no intention to proceed with the matter, and he was willing to pay the plaintiff's costs. Justice Sargeant accordingly made an order that, it appearing the investment was not properly made under the rules, and there was no intention of proceeding with it, and that the money invested had been repaid to the Society, the interlocutory motion should be treated as a trial of the action, the defendants to pay the plaintiff's costs.

Three recent Letters following VALUATIONS of Printing Plant by FRANK COLEBROOK, Printers', Newspapers' and Plate Makers' Valuer, 146, Fleet Street, E.C. (Phone Holborn 2288).

An important northern provincial firm writes: Herewith cheque with compliments and thanks; it only remains for us to add how thoroughly satisfied we are with the way you have completed the work.

An Irish printer writes: I was greatly struck with the very thorough and business-like way in which you went about the work; giving my staff so little trouble and not interfering with the routine of the office. Had I anticipated that the valuation could have been made with such expedition and exactness and under such pleasant conditions I would have availed myself of your services long ago. (August, 1913.)

A South of England printer writes: Enclosed is cheque. We have pleasure in testifying to the promptitude and care with which you carried out our valuation of plant and to thank you for doing so without cessation of work. (August, 1913)

And this *re* a fire settlement from a London firm: Now that the Fire Office has settled my claim I have to thank you for your prompt and untiring attention, which has secured such a satisfactory result.

Trade Notes.

MR. ANDREW TARRAS, the founder and chief proprietor of the *Fraserburgh Herald and Northern Counties Advertiser*, died at Fraserburgh, on Thursday last, at the age of 69 years.

WILL our readers kindly note that Messrs. Haseltine, Lake and Co., chartered patent agents and consulting engineers, are now located at 28, Southampton-buildings, Chancery-lane, W.C.

ON Saturday evening the Countess of Warwick was the guest of the Press Club at the annual ladies' dinner, held at De Keyser's Royal Hotel, when Mr. E. L. Goodman, chairman of the club, presided.

ACCORDING to *Kemp's Mercantile Gazette* there were three failures in the printing and stationery trades of England and Wales for the week ending Friday, October 17th, the corresponding week in 1912 also showed three.

COSTING CONFERENCES will be held next week in Lincolnshire at Boston and March, and the following week Mr. Goodwin is visiting Staffordshire attending meetings at Leek and Stoke. Arrangements are also being made for a visit to Norwich next month.

FOR the supply of tramway tickets for three years ending December 31st, 1916, for the Corporation of Liverpool, the tender of the Punch and Ticket Co., Ltd., Queen's-road, Dalston, N.E., is recommended for acceptance.

ON Monday, the 21st birthday of the Bibliographical Society was celebrated at the society's rooms, 20, Hanover-square, W. The President, Sir William Osler, was in the chair, and Mr. A. W. Pollard, senior hon. secretary, read a paper on what the society had done and what it might hope to do.

AT a dinner given in his honour at the Savoy Hotel, on Monday evening, Mr. Thomas J. Barratt, chairman ot Messrs. A. and F. Pears (Ltd.), was presented with his portrait. In acknowledging the gift Mr. Barratt referred to the extensive advertising of the firm, and said that one of the best forms of advertising was in the pages of the newspaper.

FOLLOWING the tradition observed annually by his predecessors in office, the Lord Mayor of Liverpool (Sir Harmood Banner) entertained the journalists of Liverpool and district to dinner at the Town Hall on Saturday evening. In addition to the representatives of the Press, there were present a number of well-known local professional and public men.

IT has been decided by the Finance and General Purposes Committee of the Institute of Journalists to suggest that in time of Labour disputes an official in each trade union concerned should be instructed to give reliable information to the Press. Protest was also made against trade union officials contributing to the Press for payment in competition with working journalists.

A BEAUTIFUL example of three-colour printing that we have just received from Messrs. Linotype and Machinery, Ltd., shows well the capacity of the Miehle Press for this class of work. It is an almost life-size head and shoulders of a girl, and the delicacy of the flesh tints and tones of the hair are admirably rendered, while the register is perfect. The portrait is a particularly fine specimen of printing and speaks well for the press on which it was produced.

THE current issue of the *Monotype Recorder* is excellently got up, and shows the varied work that can be done on the Monotype machine. There is a practical article on "Make-up in the Book Office," the issue has a new cover design in two colours, and there are particulars of Christmas competitions in which prizes to the value of £137 are offered. There are 143 prizes which may be competed for by keyboard operators and caster attendants.

IN the Chancery Division, before Mr. Justice Warrington, on Monday, an action, in which Libraco, Ltd., sued Shaw Walker, Ltd., for an infringement of copyright in a card index, was heard. The plaintiffs had invented an outfit for the working of the National Health Insurance Act, for the use of employers, and alleged that the defendants had infringed their copyright in the work by making a similar outfit. Mr. Justice Warrington said that it was impossible to say that the card was an original "literary work." The plaintiffs' case failed on the ground that the card was not the subject of copyright and must be dismissed with costs.

WHILE going over a collection of old antiquities that had been presented to the Gravesend Public Library a find was made of several unbound sheets of books printed by the two Dunkins, father and son, who, in the earlier part of the nineteenth century, were local historians, having their own printing office. The sheets found are those of books dealing with local and Kentish history, and they have been lying forgotten for about twenty-five years.

THE death has occurred at Kingstown, county Dublin, of Mr. William Hooper, formerly editor of the *Farmers' Gazette*, at the age of eighty years.

A NEW monthly magazine for men and women is to appear on the 28th inst., under the title of *Everyone's*. The price will be fourpence-halfpenny, and the publishing offices are at 4, Bouverie-street, E.C.

MESSRS. CARL HENTSCHEL, LTD., 182-184, Fleet-street, E.C., send out their latest booklet bearing the title of "Hints and Dont's," which is full of sound advice to customers as to how to order their line or half-tone blocks, how to mark the sizes, and what the drawings or other originals should be like. The booklet is beautifully got-up and neatly printed. Accompanying it is a description of the firm's new colour process, with two examples, printed in two and four printings in an effective manner, the subject being the old G.P.O. during demolition, the renderings being widely different, yet each is a perfect result.

TENDERS WANTED.—For the supply of school materials during the year 1914, for the Corporation of Dover: forms of tender may be obtained at the office of the Schools' Management Clerk, Town Hall, Dover. For printing and supplying cards, way tickets, posters, handbills, etc., for the Glamorgan, Monmouth, and Brecknock Vagrancy Committee; particulars from Mr. W. Spickett, Pontypridd. For a supply of stationery, books, and forms, for the Merthyr Tydfil Borough Police; particulars may be obtained from the Chief Constable, Town Hall, Merthyr Tydfil. For the supply in bulk of toilet and wrapping papers, for the Metropolitan Asylums Board; forms of tender from the office of the Board, Embankment, E.C. For the supply of printing and stationery for the Boston Harbour Commissioners; forms of tender may be obtained from Mr. B. B. Dyer, Church-lane, Boston, or Mr. G. E. Clarke, C.E., surveyor to the Commissioners.

A LATE ORDER.—In the City of London Court, on Tuesday, before Judge Lumley Smith, K.C., William Collins, Sons and Co., Ltd., diary manufacturers, Bridewell-place, and Glasgow, sued Messrs. Alfred Vivian Mansell and Co., stationers, 22, Silk-street, E.C., for £16 7s. 7d. for diaries supplied. The defence was that the diaries were supplied too late. Mr. Oscar Kuhn appeared for the plaintiffs and Mr. H. Strouts for the defendants. The order was given on October 28th to Mr. W. B. Collins, one of the plaintiffs' travellers, who, it was said, stated that he could not guarantee that the diaries would be delivered on November 20th, the day they were wanted, as the order had been given very late. But he said he would do his best. As defendants had accepted the diaries it was contended they were liable for the amount. Mr. Strouts said he had had an opportunity of looking into the case and as the defendants had accepted the diaries they were liable for them under the acceptance clause of the Sale of Goods Act. Judgment was therefore given for the plaintiffs for the amount claimed with costs.

AS A SEQUEL to the Marconi litigation last May, the proprietors and editors of the *Pall Mall Gazette* and the *Globe* were called upon on Saturday in the Lord Chief Justice's Court to show why they should not be committed for contempt of court. At the time Mr. Cecil Chesterton was being sued for libel by Mr. Godfrey Isaacs, managing director of the Marconi Company, an action against Mr. Isaacs was begun by Mr. O. Locker Lampson, M.P., and another Marconi shareholder, in respect of 500,000 American Marconi shares, and the *Pall Mall Gazette* combined the headlines as follows:—

ONE MILLION MARCONI ACTION.
WRIT ISSUED.
EXTRAORDINARY CASE.
MR. CECIL CHESTERTON ON TRIAL.
THE LIBEL CHARGES.

Details followed as to the statement of claim in the £1,000,000 action, and then there was a report of the Chesterton trial. The *Globe* kept the two reports apart, but gave details of the claim and said it would amount roughly to £1,500,000. After hearing counsel the rule was made absolute against the *Pall Mall Gazette*, which was ordered to pay costs. No fine was imposed. The rule against the *Globe* was discharged without costs.

THE typewriter, like its ally stenography, is much older than most people think. The first machine constructed was the work of an Englishman, Henry Mill, who patented it in 1714. The next recorded patent for a typewriter was granted in France in 1841, to a blind man, Pierre Foucalt, whose machine was used in many public institutions throughout Europe. The first patent for a machine on the type-bar principle dates from 1856, but to C. Z. Sholes, an American, belongs the credit of the machine which in 1873 was put on the market.

THE American Ambassador is to be the guest of the London district of the Institute of Journalists at their annual dinner on Saturday, December 13th.

THE compositors employed at the *Rotherham Advertiser* office and the Caxton Printing Works have formed a Guild which has for its object the study and practice of up-to-date designing and other matters relative to the printing craft.

THE current issue of the *Amateur Photographer* is a special autumn number of large size and full of good things in the form of articles, pictures, etc., that will be most interesting to the photographer, whether amateur or professional. The number is excellently printed.

ACCORDING to the Census of Scotland for 1911, the number of persons of the age of 10 years and upwards who were engaged in the paper, stationery, book and paper trades was 26,652 males and 22,628 females, the former being fifteen and the latter twelve per 1,000 of the total number of employed persons in the country. There was a decrease of 1 per 1,000 since 1901 in the case of the female workers.

MESSRS. T. G. AND J. JUBB, of Brandling-street Works, Hunslet, Leeds, have issued a revised price list of their printers' leads, furniture and quotations that is worthy of the attention of printers. The firm's leads are of excellent quality, being cast and trimmed by special machinery, and may be depended upon for quality and accuracy. Stocks are kept in Leeds and London ready for delivery, the representative for the metropolis being Mr. Glen Steel, 64, Chancery-lane, W.C. Messrs. Jubb also keep in Leeds and London large stocks of metal for Monotype, Linotype, Typograph, stereotype, autoplate and electrotyping, and with a 50 years' experience supply every quality of the best.

THE Institute of Printers and Kindred Trades, following the custom of the past twelve years, are preparing their souvenir for 1913-14, consisting of specimens of every kind of printing process, showing the progress of the art during the year. In past years a copy of the souvenir has been accepted by the King. A committee has been appointed to carry out the work in connection with the preparation of the souvenir, and they are anxious to enourage specimens of typographic work, indicating the various styles of printing throughout the kingdom. They are of the opinion that there are many jobs printed in the ordinary way of business that could be adapted and amplified, and would make worthy contributions to the souvenir. This year a limited number of copies of the souvenir will be offered for publication through a publishing house, to give the volume a wider scope for its educational objects. Full particulars may be obtained from Mr. Edward J. Brown, hon. secretary to the Souvenir Committee.

AUSTRALIAN COLOUR PRINTING.—We have received a very interesting publication both from a commercial aspect and from a typographical point of view. This is a copy of a work, "Cabinet Timbers of Australia," by R. T. Baker, F.L.S., etc., curator, just issued by the Technological Museum, Sydney, Australia, which gives an excellent idea of the wealth of variety of Australian timbers, and of the specific characteristics of the respective woods that may be classed as cabinet. Apart from this, however, it is an interesting example of the printer's art. Interspersed amongst its 180 pages are 68 full page coloured plates, exactly reproducing the natural colours and textures of the various timbers, in a manner that reflects the highest credit on the Government printer, Mr. W. A. Gullick, and his staff, who are responsible for its execution. It is claimed to be the first time that natural colours and textures of timbers have been reproduced in that part of the world at least. There is a brief description of each wood illustrated, the purposes for which it is generally used being described, and in many instances illustrations appear of furniture, fittings and other articles that have been made in the particular wood. It undoubtedly forms a valuable and interesting historical record.

THE Labour Exchanges of the Board of Trade, during the four weeks ended September 12th, received 1,497 applications for employment in the printing, stationery, paper and book trades, of which 754 were from women. The number of vacant situations in those trades notified during the period in question was 679, of which 444 were for women. The number of vacancies filled through the Exchanges was 458, but only 149 were taken by

Digitized by Google

men. In the Juvenile Branch, 845 vacancies were notified, 539 being for girls, and 590 filled, of which 387 were taken by girls.

A MEETING of the Synod of Fife, held in Dunfermline, the Rev. James Clark, Balgonie, asked if many people at the present day did not absent themselves from public worship, and were there not signs that the Church was losing the hold it once had upon the hearts and minds of large masses of the people. One thing that could not be overlooked, and it was something that did no discredit either to the Church or to the people, and that was the fact that the Press was now superseding the Pulpit to a considerable extent. Through the outpouring of books, papers, and periodicals from the press the preaching business had been largely taken out of the mouths of the clergy. Might it not be well to diminish the quantity of preaching and improve the quality?

Association of Master Printers

OF

WEST AND NORTH-WEST LONDON.

This newly-formed Association is the outcome of the Costing Congress at Kingsway Hall, and later at the Guardians' Hall, Paddington, when Mr. W. Howard Hazell, by special request, met a large number of the printers of the district. From those who were present then a small committee was formed, whose efforts have met with encouraging success, and the formation of the Association is now an accomplished fact. It is affiliated to the London Master Printers' Association, and has on its committee representatives from nearly every locality in the two postal districts it covers. A concise set of rules has been agreed upon, and the first meeting of the season was held on the 14th inst., at the Westbourne Park Institute, Paddington. The President, Mr. J. R. Burt, of Morton and Burt, Ltd., was in the chair.

In reporting on the work accomplished, he stated that 58 printers had been discovered whose names did not appear on the published lists, and 13 names were found to be non-existent, the number of master printers in the district at that date being 222. Written consent to become members of the Association had been received from 37 firms up to the present. This was increased during the evening by three. Twenty-four of these, by arrangement with the London Master Printers' Association, would be entitled to membership of that body without extra subscription. The committee were endeavouring to visit every firm in the district, and so far, they had been well received. By the time this visitation was complete they expected a large addition to the membership; and if the other districts of London would follow, a large, united and strong trade association was sure to result.

Mr. A. E. Goodwin, secretary of the Costing Committee, was present, and addressed the meeting. He gave instances of different methods of costing that had come before him during his visits throughout the country, and showed that while in some instances they could be made to give the same result in general practice, the differences in pricing resulting were enormous. The object of the Costing Committee was to secure uniformity, and this system in practice would be found to be the simplest as well as the safest. There need be no fear of the system working to the disadvantage of some offices, for a careful comparison made of offices of different sizes where it was working had shown that there was very little difference in the total hourly cost in any of them.

During the discussion examples of variation of prices were given by members, and the opinion of those present of the hourly value of composition was written down and handed in. The result showed a variation from 1s. 3d. per hour to over 1s. 9d., by far the larger number estimating was for the higher figure.

The following are the office bearers of the Association for 1913-14:—President, Mr. J. R. Burt (Morton and Burt, Ltd., Paddington); Vice-President, Mr. F. Scarsbrook (Baines and Scarsbrook, St. John's Wood); Hon. Treasurer, Mr. S. Sidders (S. Sidders and Co., Kensington); Hon. Secretary, Mr. S. J. King (*Gazette* Office, Ealing, W.); Hon. Assistant Secretary, Mr. W. H. Leveridge (Leveridge and Co., Harlesden, N.W.); Executive Committee, Messrs. T. Evans (T. Evans and Sons, Kilburn), J. Hastie (J. Tamblyn, Notting-hill), J. E. Jones (Burt and Sons, Bayswater), A. Langley (Langley and Son, Euston), F. A. Perry (West Ealing), F. E. Philp (Harlesden), H. W. Searle (Hammersmith), G. F. Weston (Warren Hall and Lovett, Camden Town), W. J. Pollock (81, Mortimer-street, W.). One to be elected.

The meeting night of the Association is the second Tuesday in each month.

The Bookbinders' Strike

Has now reached its eleventh week, and as yet there are no signs of a termination of the struggle, which seems as far off a settlement as ever. Every effort is being made to induce the employees at Esher to join the union, and the agitation has already had the effect of bettering their conditions and increasing their wages. Most of them have received rises of 2s. to 6s. during the last two months. Several open-air meetings have been held at Esher, but "pickets" from the works were present and noted every worker who turned up; thus the employers have adopted the strikers' tactics, and are imitating their methods.

An incident of the strike was the appearance at the Clerkenwell Police-court of a bookbinder who was charged with using insulting words and behaviour, whereby a breach of the peace might have been occasioned at Kirby-street. An inspector said that he was accompanying a number of women going into Messrs. Burns' premises in Kirby-street. There was a crowd of women following, hissing and hooting the women who were going to work. Prisoner, who was one of the strikers, was there. Witness had previously cautioned the man on his conduct, and he took him into custody. The inspector added that owing to this strike 50 police had to be employed daily in the vicinity of the premises. The patrols had to be doubled in consequence of what took place. Mr. d'Eyncourt fined the man 40s.

We understand that thirty-three out of 51 publishers have given assurances that they will not give any orders to Messrs. Burn until a settlement is reached, but 18 have declined, as they do not desire to take sides in the dispute.

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help a-d an ornament thereunto."
FRANCIS BACON, Baron Verulam.

It was no mere despatch of a small parcel of beautiful little volumes, it was a personal benefaction which Mr. Batsford conferred on me when he sent me half-a-dozen of "The Fellowship Books," edited by Mary Stratton.

o o o

Even from 94, High Holborn, his address' and the home therefore whence so much that is distinguished and delightful has issued, there can have been few, if any, pleasanter outgoings than are to be noted in this instance.

o o o

There is nothing half-hearted, or apologetic or temporising about this publisher.

o o o

He decided to produce a series of little books to sell for a florin each, which should be of pocket size, and might thus be walking or resting companions, which as to their subject matter might be fitly comprehended under the attractive title I have named; teachings which should oppose things mean and sordid in the best of all ways—by presenting something broader, deeper and higher; books which should censure if they censured, not by violent attack, but by the mere dignity of their excelling.

o o o

And he decided that these books should be exquisitely printed and paged and lettered, and bound; and all this varied thought of his has been most perfectly fulfilled.

o o o

He started with half-a-dozen volumes, to which this October he has just added half-a-dozen more.

o o o

The first six volumes were:

"Friendship," by Clifford Bax;
"The Joy of the Theatre," by Gilbert Cannan;
"Divine Discontent," by James Guthrie;
"The Quest of the Ideal," by Grace Rhys;
"Springtime," by C. J. Tait;
"The Country," by Edward Thomas.

o o o

Authors of the second half-a-dozen include R. C. Lehmann, great oarsman, great wit, great humanist, famous Knight of *Punch's* Round Table. Here he is writing for this little "idealists' library," to call it by that name, "a book for animal lovers" called "A Spark Divine."

Did not Charles Kingsley avow his belief in the immortality of his dogs and horses.

o o o

But this, of course, is a printing journal. To the format then. I note that the type is old-face English, thin leaded. The uniform cover is 5 inches by $7\frac{1}{8}$ inches; projecting little more than a nonpareil. It is blue, cloth bound, gold lettered on sides and back; with light gold border ornament.

o o o

The pagination is after the old best models with deepest margin at foot. The paragraph indentations have an ornament to keep the even line adown the page. Even the old style of footnoting the first word to be found on the page following is here observed. But there is no excess, nothing freakish, in all this.

o o o

The type pages are ample and the type itself of the pleasantest. The capital lettering is based on that of the Trajan Column; it is Latin in perfection.

o o o

Of course if mere quantity and weight are to decide your choice in its favour you must buy three cheap eightpenny books, produced as the advertisements of such book production say, "under newspaper conditions." You must turn away instanter from "The Fellowship Books." That will involve no effort in the case imagined; the case of one who must have bulk; a lot for his money.

o o o

These books are a challenge or even a defiance to such a one. They are as a paragraph on the graceful printed and ornamented wrapper provided with each book, sets forth, "a new contribution by various writers toward the expression of the human ideal and artistic faith of our own day."

o o o

The bulk lover is not hopeless. He's only slow. The germ of appreciation is in him if it can but be reached. William Morris used to say that those who had eyes and ears must never despair of those who seemed to have none.

o o o

They must go on worrying them—into peace. I don't say that he put it just like that. I do know that he meant it. They must make the blind see, and the deaf hear.

o o o

And if this much space devotion in a printing trade journal to these little books seems to anyone somewhat unusual and ill judged—to say nothing of other space I shall want, for I hope to revert to this topic—why let me cite a letter I received, now 17 years ago, from De Vinne, America's greatest printer.

o o o

He was writing on the subject of the influence of Morris upon the American craft; even so far back. One man in a Hammersmith workshop constructed out of two cottages—a man operating only hand presses,—had come said De Vinne to exert a tremendous influence upon American letterpress and chiefly in the direction of accepting its natural restraints; of developing its own elemental virile strength, within its own legitimate sphere and within its own limitations, leaving to lithography the kind of work most natural to lithographic versatility.

o o o

The Morrisian doctrine seemed a hard saying; it was certainly, an insistent trumpet toned "contribution towards the expression of the human ideal and artistic faith of our own day." It certainly made a bold challenge to American and to all printers, and certainly Morris made us come along with him; as Bernard Shaw said in his in memoriam tribute.

o o o

Now these thoughts come athwart my mind in this connection both because of the unlikeness of these little books to those most commonly put before us, and also because of that unlikleness being after all less startling than in the Kelmscott instance.

o o o

Morris has been dead seventeen years. He was learuing while he was teaching. Mr. Batsford is a later Morris, in thought and feeling. These books have nothing of that super strength of black against white which as in certain Morris books, makes some of us think the works might possibly not be quite so good to live with as to gaze upon.

o o o

These Fellowship books are books to live with. Nothing is undone. I wish every printer would order one.

o o o

Send for one; or better still send for all.

FRANK COLEBROOK.

Is the Post Card Going?

THE Postmaster-General, in his annual report on the work and business of the Post Office, issued on Monday, notes increases in every branch of the postal service, except that of the carrying of post cards, which shows a considerable falling off during the twelve months dealt with, both in the picture and business varieties, except in the case of London, which still maintains a high figure. That the post card "craze," as it is sometimes called, should show a falling off has long been prophesied, and the lower figures will no doubt be seized upon by croakers as an indication that the post card as a means of communication has had its day, and that the inevitable decline in popularity that they foreshadowed has now set in. We do not look at the Postmaster-General's figures, however, as indicating a decline of the post card, and whatever may have been the causes at work to lessen the number sent through the post during the year in question, we believe that the post card, especially in its pictorial aspect, is very far from extinction, and that next year's figures will show that its popularity with the public is as great as ever, and the present falling off only a passing phase. If the post card were to vanish what would be given us to take its place? To the tourist and traveller it is a godsend, and to our summer holiday makers it provides a simple means of communicating with friends without the waste of time that attaches to the writing of a letter, and for that merit, if for nothing else, it is bound to be always in demand. Many large plants in every European country are devoted to its production, an enormous capital is sunk in the business, and many thousands of workers are employed. That such a firmly established institution as the pictorial post card is on the decline is unthinkable, and we doubt not that the next official return will show figures that prove that the end of the reign of the post card is not yet.

* * *

A Difference of Opinion.

THE NEW American tariff and its effects upon our British industries still continues the topic of the day in trading and manufacturing circles. In some industries the changes are looked upon as advantageous, while in others a feeling prevails that but little benefit is to be derived in this country as the outcome of the reductions in duty. In the printing and publishing trades there is a considerable difference on the subject, the head of one large house giving the opinion that the reduction of 10 per cent. in the tariff for printed books would not involve any great increase of business, while the head of another firm expressed the view that it must undoubtedly have a great and beneficial effect, not only on the printing trade but on the trade of the country in general. The *Scotsman* has been interviewing several of the leading publishers in Edinburgh, and in that city a difference of opinion also prevails. Mr. W. B. Blaikie, LL.D., of Messrs. T. and A. Constable, said he did not look for any great increase in the export of books to America, but there could be no doubt that the reduction of 10 per cent. would make a slight difference to publishers of non-copyright books, as books possessing the United States copyright required to be set up in the United States. The revised tariff might also result in some small increase in the production of books which would have in America a sale insufficient to make it worth the author's or publisher's while to obtain an American copyright by printing it in that country. It was the view of the head of another leading firm, however, that the change must necessarily result in an extensive new field being opened up for the cheaper form of books. At present the export of books from this country was comparatively small, but the improved conditions now presented by the new tariff must, in his view, result beneficially to home publishers. The increased production, he thought, would be pretty considerable. Printing ink is also among the articles on which a reduction has been made, but a representative of a leading Scottish firm, which had for five or six years a branch in New York, but eventually found competition with American manufacturers under the old tariff too severe, was of the opinion that it was impossible to compete in that line profitably with the Americans under any tariff whatever. The papermakers in the Edinburgh district are not very sanguine as to any increased trade being done with the United States, but against that an important Scottish firm with a branch in New York, have found it profitable, even under the old tariff, to buy their paper in this country and send it out to America, and they expressed the opinion that under the new conditions it should be even more profitable for British manufacturers to export to America. It is almost too early yet, however, to gauge the feeling of the trade as to the business that may be done, but we incline to the opinion that the reduction in the tariff removes a great obstacle to our trading with the United States, and that there will now be plenty of opportunities for pushing business on the other side.

MESSRS. HARRILD AND SONS have been awarded a silver medal at the Ghent Exhibition for their exhibit of printing machinery.

GOVERNMENT

Contracts During September.

During the course of last month the following contracts where entered into by H.M. Stationery Office:—

PRINTING, BINDING, ETC.

Binding 700 Memo Books, printing, binding, etc., 2,000 books "S, 1308," supplying 1,000 Portfolios, 16-in. by 10¼-in. by 2¼-in., Drake, Driver and Lever, Ltd., Rosebery-avenue, E.C.

Binding 10,000 ciphering books, printing, binding 2,000 Cash Books, Penny Bank, Fenner, Appleton and Co., Ltd., 77, St. John-street, E.C.

Binding 24,000 Rifle and Field Exercises for H.M. Fleet, J. Adams, 76-78, Grays-inn-road, W.C., Davison, Clarke and Co., Ltd., 16-20, Underwood-street, N.

Printing, binding, etc., 35,000 Army Book 153, supplying 35,000 covers for ditto, 500 Portfolios, 8,000 Portfolios, Army Book 234, 7,000 Army Form B. 2,067A, Waterlow and Sons, Ltd., Finsbury, E.C.

Printing, binding, etc., 2,500 books T.E. No. 520, 5,000 books T.E. No. 518, 5,000 books T.E. No. 519, 1,500 Penny Bank Ledgers, 1,000 Guard Boods for "General Entry," 15,000 Registered Parcel Post Delivery Receipt Books, McCorquodale and Co., Ltd., Wolverton.

Printing, binding, etc., 5,000 Army Books (Nos. 29 and 29A), supplying 7,000 Army Form B 2,067A, J. Truscott and Son, Ltd, Tonbridge.

Printing Home Office Circulars, J. Truscott and Son, Ltd., Suffolk-lane, E.C.

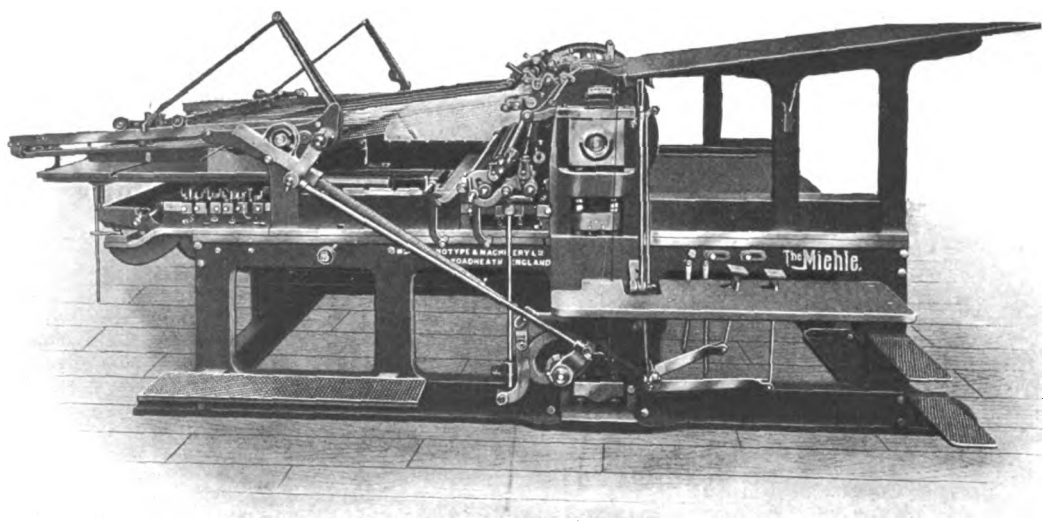
Printing Insurance Contribution Cards, Harrison and Sons, St. Martin's-lane, W.C., and Hayes; C. Straker and Sons, Ltd., 5-9, Bishopsgate-avenue, E.C.

Supplying complete, with Metal Fittings, 2,000 Cases, Moore's Modern Methods, Ltd., 4, Lambert-hill, E.C.

Supplying 6,000 Army Form B 2067A, mounting 1,000 Warning Notices, Eyre and Spottiswoode, Ltd., East Harding-street, E.C.

Supplying 65,000 copies Royal Naval Calendar, 1914, A. S. Mitchell, Classic Colour Press, Katesgrove, Reading.

Supplying 50,000 copies "The Army Calendar, 1914," supplying 30,000 Recruiting Poster, Stokers, Gale and Polden, Ltd., Aldershot.



Messrs. King and Son, of Bolt-court, Fleet-street, have been allotted the contract for the insertion of H.M. Office of Works Advertisements, in various London and Provincial papers.

DURING the nine months ended September 30th last, the changes in the rates of wages in the printing and allied trades resulted in a total net increase of £656 per week in the case of 8,369 persons, as compared with only £242, and 3,813 persons, in the same period of last year. During the twenty years, 1893-1912, the average annual number of persons employed in these trades whose wages were affected by the various changes was 3,477, the total net increase of their wages during that period being £5,431 per week.

The Miehle

TRADE MARK

IS PRODUCING THE FINEST COLOUR, BOOK, AND JOBBING PRINTING THROUGHOUT THE UNITED KINGDOM AND COLONIES.

In half-tone work, the Miehle reproduces every gradation of tone contained in the blocks—from soft high-lights to heavy solids.

Its reputation for perfect colour printing (which includes efficient rolling power and the features which make for dead register) is embraced by the standard phrase "Miehle Quality," which means essentially Miehle printing.

The Miehle is fitted with two deliveries, which at will deliver the product printed side up or printed side down.

The inking equipment provided on this press consists of sixteen rollers and a large ink table; of these, four are forme rollers with reciprocating riders and rollers over them (nine in all, arranged in pyramid form). The other seven rollers distribute the ink on the table before it reaches the forme rollers.

This press is built in six sizes; the smallest size takes a sheet up to 26-in. by 39½-in. and the largest size 46-in. by 66-in.

Miehle presses are also supplied in tandem, so arranged that the units may be disconnected and used as single machines.

The Miehle is Manufactured and Sold by

LINOTYPE AND MACHINERY LIMITED

who have the sole and exclusive right to manufacture and sell The Miehle in the United Kingdom and Colonies (except Canada).

Head Office: 188 & 189, Fleet Street, London, E.C.

DUBLIN: 17, Crow Street. MANCHESTER: County Buildings, 4, Cannon Street. GLASGOW: 197, Howard Street.

Financial.

Offices of the *British and Colonial Printer and Stationer*,
58, SHOE LANE, LONDON, E.C.
WEDNESDAY, Oct. 22nd, 1913.

CONDITIONS in the short credit market remain unaltered, funds still being in abundant supply. Discount rates are firmly maintained. Yesterday about £800,000 was offered in the open market, of which India will take about £150,000, and the Bank of England will probably get half a million. Bullion movements to date have resulted in a net influx of £336,000, the largest movements being the receipt of £200,000 from Argentina and the withdrawal of a similar amount for Egypt, most of the balance being bar gold purchases. Stock markets have taken a turn for the better this week; in many directions prices have improved, and there is a more cheerful tone. Consols are a shade higher, quotations being 72 1/16 to 72 1/8 for money, and 72 1/16 to 72 1/8 for the account.

The better tone in stock markets has had a little stimulating effect on the miscellaneous industrial market, where the general tendency of prices is better, though the volume of business has not increased. Movements in our list of printing, newspaper and publishing shares have included rises in Associated Newspapers Ord. of 3d., in *Gentlewoman* Pref. of 1/8, in Raphael Tuck and Sons Pref. of 1/8, and in Waterlow and Sons Def. Ord. of 1/2. Falls have occurred in Causton and Sons Pref. of 1/4, in International Linotype of 2, and in Weldons Ord. of 1/16. Business has been done during the past seven days in Amalgamated Press Pref. at 21s. 6d. and 20s. 9d.; in Associated Newspapers Pref. at 20s. and 20s. 9d.; in *Daily Express* (1908) Deb. at 60 1/2 and 61; in Ilford Ord. at 13s. 9d. and 14s.; in *Illustrated London News* and *Sketch* Pref. at 13s. 6d., 13s. 1 1/4d. and 13s. 9d., and in the Ord. at 3s 3d. and 3s. 3d.; in Kelly's Directories Pref. at 9 1/8; in Linotype and Machinery A Deb. at 54 and 52 3/8, and in the B Deb. at 37 1/2; in Edward Lloyd Pref at 21s. 6d.: in George Newnes Pref. at 16s. 3d.; in Raphael Tuck and Sons Pref. at 99s. and 98s. 9d.; in Waterlow and Sons Def. Ord. at 27; and in Weldons Ord. at 30s. 3d. and 30s. 7 1/2d.

NEW COMPANIES.

HIDES AND SPEIRS, LTD.—Registered on October 15th, with a capital of £5,000, in £1 shares, to carry on the business of engravers in copper, wood, steel, zinc, brass and other metal or substance; process workers, printers, stationers, etc., and to adopt an agreement with R. E. Hides, and A. C. Speirs. The subscribers are R. E. Hides, and A. C. Speirs. Private company. The number of directors is not to be less than two nor more than five; the first are R. E. Hides, and A. C. Speirs (managing director).

SHORTHAND ASSOCIATION, LTD.—Registered on October 15th, with a capital of £250, in £1 shares, to carry on the business of teachers of all commercial subjects, including preparation for the Civil Service examinations, shorthand, typewriting, etc. The subscribers are F. H. Hatchard, and Mrs. B. Hatchard. Private company. The number of directors is not to be less than two nor more than three; the first are F. H. Hatchard (permanent governing director), and Mrs. B. Hatchard. Qualification £5. Registered office, Holborn Hall, Gray's-inn-road, W.C.

WOOLRIDGE AND CO., LTD.—Registered on October 15th, with a capital of £1,000, in £1 shares, to carry on the business of stationers, printers, lithographers, etc., to acquire the business carried on at Highgate, as "Woolridge and Co." The subscribers are E. Jackson and W. G. Clegg. Private company. The number of directors is not to be less than two nor more than five. The subscribers are to appoint the first.

EXHIBITIONS OF BUSINESS SYSTEMS, LTD.—Registered on October 15th with a capital of £250, in £1 shares, to provide for the organisation of business Exhibitions in various towns in the United Kingdom. The subscribers are J. Hastings, G. F. Shubotham, A. C. McLellan, P. T. Smith and F. W. Payton. Private company. The number of directors is not to be less than three nor more than five. The first are J. Hastings, G. F. Shubotham, A. C. McLellan, P. T. Smith and P. W. Payton. Qualification five shares.

JOHN BOND (LONDON), LTD.—Registered on October 10th, with a capital of £5,000, in £1 shares, to carry on the business of manufacturers of marking ink, writing fluids and copying inks of all kinds, ribbons and carbons for typewriters, etc., and to adopt an agreement with A. B. Hichisson. The subscribers are A. B. Hichisson and Mrs. E. Hichisson. Private company. The number of directors is not to be less that two nor more than seven. The first are A. B. Hichisson and Mrs. E. Hichisson (both permanent). Qualification 100 fully-paid shares. Registered office, 75, Southgate-road, N.

UNDERWOOD TYPEWRITER CO., LTD.—Registered on October 14th with a capital of £75,000, in £1 shares, to take over the business carried on at 120, Queen Victoria-street, E.C., as the "Underwood Typewriter Co," and to carry on the business of manufacturers of and dealers in typewriters, duplicators, cyclostyles and other printing, writing or copying machines, etc. The subscribers are A. L. Claften and J. Summer. Private company. The first directors are J. T. Underwood, A. L. Claften, J. Summer, C. W. Nand and De Witt Bergen. Qualification (after termination of original management), £100. Remuneration as fixed by the company.

BAY DU NORD PULP CO., LTD.—Registered October 14th, with a capital of £50,000, in £1 shares, to carry on the business of mining, smelting, wood pulp manufacturing, trading, and metallurgical company in all its branches. The signatories are C. R. Western and F. B. Scott. Private company. The first directors (to number not less than three nor more than five) are to be appointed by the signatories.

MY FAVOURITE PRESS, LTD.—Registered on October 8th, with a capital of £6,000, in £1 shares, to carry on the business of newspaper and magazine proprietors, newsagents, journalists and literary agents, etc., and to adopt an agreement with J. Woollen. The subscribers are F. H. March and G. W. Eastham. Private company. The number of directors is not to be less than two nor more than five. The first are not named. Registered office, 10, St. Helens-place, E.C.

WEBBERLEY, LTD.—Registered on October 8th, with a capital of £7,500, in £10 shares, to carry on the business of printers, lithographers, stationers, account book manufacturers, etc., and to adopt an agreement with A. The Burning of the "Volturno."

Mr. Arthur Spurgeon, general manager of Messrs. Cassell and Co.'s, whose graphic account of the burning of the "Volturno" was flashed by wireless to the British Press, gave, on Tuesday night, at the Memorial Hall, some further stories of the great sea tragedy to an audience consisting of members of the staff of the great publishing firm. Mr. Spurgeon held his audience with rapt attention.

Sir Malcolm Morris, K.C.V.O., who took the chair, referred to the surprise expressed in many quarters as to the amount Mr. Spurgeon received for his wonderful coup. The whole of the money, he said, that was paid for Mr. Spurgeon's messages he had allocated to charities.

In the course of his story Mr. Spurgeon said he was made editor for the week of the *Cunard Bulletin*, and, as such, all copies of wireless messages received by the liner were sent to him in his official capacity. An account of the disaster as seen from the "Carmania" was printed in the *Bulletin*. The £12 profit that resulted from the sale of the *Bulletin* was handed to the survivor Trentepohl—the man picked up by the "Carmania."

An interesting statement was made by Mr. Spurgeon regarding Captain Inch's last message, which was reported as "For God's sake come and help us or we perish." I will," said Mr. Spurgeon, "take you into my confidence so far as to say that that was not the actual message. What the captain did say was, "For God's sake can't you send us some boats? Do something." "I knew that every ship was doing its very best and lives had been risked in sending boats, and I knew that was simply the despairing cry of an agonized man. I did not think it desirous to send the message, which, had it been published, would have inferred that the boats were not doing their best." He then took it upon himself to curtail the message and to deliver it to the world in its modified form. "Everything that could be done, was done," he said.

At the conclusion of Mr. Spurgeon's story a vote of thanks was proposed by Mr. Thomas Young, the advertisement manager of Cassell's, which was seconded by Mr. T. W. M'Ara. The proceedings closed with the singing of the National Anthem.

Printers' Pension Election. — Votes are solicited for the election in March next, in behalf of Mr. Oliver Brownjohn, machine manager, aged 60 years. The applicant was apprenticed to the late Messrs. Virtue and Co., for whom he worked 15 years; National Press seven years; Witherby's six years; *Black and White* seven years; Hudson and Kearn six years; Church Printing Co. two years. He is a life subscriber to the Pension Fund 1879, and annual six years. He is suffering from nervous debility, vertigo, and failing sight. The recommending subscriber is Mr. Frederick Cumbers, and the applicant is also strongly recommended by a number of well-known gentlemen. Proxies may be sent to the candidate at 16, Chameleon-road, Park-lane, Tottenham.

The Printing Crafts Guild.

The annual meeting of the Printing Crafts Guild was held in the Municipal School of Technology, Manchester, on Saturday last, when the President, Mr. R. B. Fishenden, occupied the chair.

After the passing of the minutes, the annual report was read by Mr. F. J. Hughes, and was in part as follows:—

The Committee has pleasure in presenting their report and balance-sheet for the session 1912-13, which has been in every way a phenomenal year. The membership has increased by 30 per cent.; the character of the meetings has been of a high order; and we are in the happy position of carrying forward to the next year a larger balance than has previously been the case.

The total subscribing membership roll is 109, representing an increase of 30 upon last session. The Committee hopes that the members will continue to spread the usefulness of the Guild by making it known further to any friends who are eligible for membership.

The lectures and visits had an average attendance of 60, and on every occasion the work has been of considerable technical value. The aims of the Guild are of a strictly educational character, and the efforts of the Committee in arranging the syllabus have been directed towards subjects of special interest to those engaged in the printing crafts. These subjects were outside the scope of ordinary knowledge in many cases, and were dealt with by specialists. We have been unusually fortunate in the character of the visits on every occasion.

The balance-sheet shows an income of £12 6s. 3½d., the expenditure being £8 9s. 4½d., leaving a balance of £3 6s. 11d. in the hands of the honorary treasurer.

The Committee tenders its thanks to the following: The Principal of the School (Mr. J. C. Maxwell Garnett) and the House Committee for the use of the school for meetings. Lecturers: Messrs. H. Cadness, F.S.A.M., Henry Guppy, M.A., T. W. Oliver, Julius Hübner, M.Sc. Tech., and F. W. Wright. Chairmen: Messrs. Chas. W. Gamble, C. B. Penwarden, J. C. B. Percy, and other gentlemen. Visits: The East Lancashire Paper Mill Co., Ltd., Messrs. Linotype and Machinery, Ltd., the P.P. Press (Messrs. Bibby), Liverpool. Artistes: Mr. W. M. Menzies and his party. Provisional arrangements have been made for the work of the next session, so that there will be little delay in the completion of the syllabus.

(Signed) R. B. FISHENDEN, President,
F. J. HUGHES, Hon. Sec.

The report and balance sheet were passed, *nem. con.*

Election of Officers.

President: Mr. R. B. Fishenden.
Vice-President: Mr. John Taylor.
Hon. Treasurer: Mr. C. Doughty.
Hon. Auditor: Mr. T. W. Oliver.
Hon. Secretary: Mr. R. F. Singleton, 113, Wood Bank-terrace, Turncroft-lane, Stockport.

Committee: Messrs. F. J. Hughes, W. M. Menzies, A. Edwards, Jas. Begg, Edward McVay, J. W. Webster, J. E. Cass, Jas. Worthington, W. R. Cannell, Jos. Mellor, J. Crook and —. Stevens.

Under the head of any other business, Mr. A. EDWARDS moved, and Mr. J. E. CASS seconded: "That the Committee discuss the question of increasing the number of Vice-Presidents."—Carried.

Moved by Mr. W. R. CANNELL, and seconded by Mr. F. BIRD: "That the Committee consider the advisability of assisting the President to form a guarantee whereby all lectures could be fully reported and printed and circulated amongst the members for a small charge." On being put to the meeting there was no further support beyond the mover and seconder.

The business being completed, the following excellent programme gave great delight to the 100 ladies and gentlemen present.

Pianoforte Solo	The Wedding Glide Mr. B. SUTTON.	... ...
Song... ...	Red Devon by the Sea Miss WITHECOMBE.	... ...

Song... ...	Wilt thou forgive Mr. J. H. ROBERTS.	... ...
Impressions	The Football Match Mr. W. M. MENZIES.	... ...

Musical Director—Mr. W. M. MENZIES.

The artistes acquitted themselves so well that in the second half, after Mr. W. Buckley had answered to an encore, the programme had to be strictly adhered to as the hour was getting late. The pianoforte duet by Mrs. H. Kirkman and Mr. B. Sutton was a real musical treat, and the mimicry of Mr. W. M. Menzies, particularly in "The Football Match," was excellent.

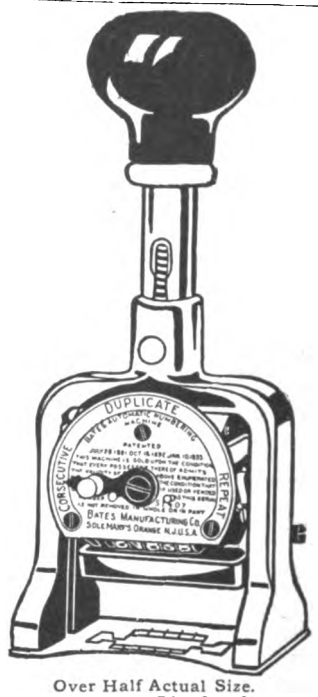
During the evening, through the kindness of the Committee, chocolates and fruit were served at intervals, and were greatly appreciated.

The Committee are making efforts to maintain the "high order" of lectures, visits, etc., and on Saturday, November 8th, Mr. Charles W. Gamble (Past-President) will open the winter session by a lecture demonstration on "Colour." On December 6th, Mr. A. E. Goodwin, organising secretary of the Costing Committee of the Federation of Master Printers, will explain "Cost Finding for Printers." By kind permission of Sir Jesse Boot a visit will be made to the Model Printing Works of Messrs. Boots, Ltd., Nottingham; also there will be a visit to the paper mill of Messrs. Wrigley and Sons, Bury.

FREE LANCE.

Papermaking in South Africa.

At a recent meeting of the Executive of the Pretoria Civic Association, Mr. Ashdown brought up a report of the Industries Committee, appointed to enquire into the subject of the establishment of industries suitable to Pretoria. The report stated that with reference to the papermaking industry, which gave promise of a great future, the committee had arranged for the sending of samples of veld grass and mealie stalks to Great Britain and America for the purpose of having them tested as to their suitability for papermaking. It had, said the report, been thought advisable for the present to confine the investigations of the committee to the manufacture of the rougher kinds of paper, paper bags, and strawboard, which is so extensively used for bookbinding and for the making of pasteboard boxes. The machinery manufacturers of England and America had been asked to send out samples of the paper manufactured from the material sent from Pretoria by the committee, together with the cost of machinery necessary to produce from ten to fifteen tons of paper and strawboard per week. A sample of the veld grass had also been forwarded to Holland with similar instructions and enquiries. The report of the sub-committee was adopted, and the thanks of the Association were tendered the members of the committee for the work they had done.



THE L.C.C. is at present experimenting with an automatic printing apparatus on one of the tramway routes. The machine, which is the invention of the Cologne engineer, weighs 4 lb., is hung on a strap worn by the conductor, and by a turn of the handle the ticket is produced clearly printed, containing the number, date (morning or afternoon), where available to and from, time issued, changing point where necessary, amount of fare, and some of the usual regulations. The machine also automatically calculates the number of tickets of each denomination issued during the day and the amount to be paid in by the conductor, thus doing away with way-bills and checking.

A Dispute About Paper.

Paper Supplies for the "Midland Express."

Question of Priority of Charge.

In *re* the *Midland Express*, Ltd., Pearson *v.* the company, Mr. Justice Sargant had before him, in the Chancery Division, last week, an adjourned summons taken out by the liquidator of the *Daily Express*, Ltd.

Mr. Mark Romer, K.C. (with him Mr. Sheldon), said the *Daily Express*, Ltd., were debenture holders of the *Midland Express*, Ltd. The question now before the Court was whether the Darwen Paper Mills Co. was entitled to be paid their debt in priority to the debentures of the *Daily Express*, Ltd. The point was whether the latter company had properly postponed their debentures. On October 28th, 1910, a letter, signed by Mr. E H. Johnston, a director of the *Daily Express*, Ltd., and of the *Midland Express*, Ltd., was addressed to the Darwen Co., saying that, in consideration of the latter continuing to supply the *Midland Express* with paper, the *Daily Express* Co., as holders of debentures, undertook that they would postpone their debenture debt. This letter was signed,

"C. ARTHUR PEARSON,
"For the *Daily Express*, Ltd.,
"E. H. Johnston, director,"

and by the liquidator. But there was no evidence of any resolution of the directors either delegating their powers to Mr. Johnston or authorising him to enter into such an arrangement as this. On March 7th, 1913, the *Daily Express*, Ltd., was wound up, and before this judgment had been pronounced in a debenture holders' action, in which a receiver and manager had been appointed.

Mr. Grant argued that there was authority for Mr. Johnston to sign for the *Daily Express* Co., and that his action was ratified by a subsequent resolution of the company.

His Lordship said the summons raised the question as to who were the true owners of the 31 debentures issued to the *Daily Express*, Ltd., the proceeds of the sale of which had been set aside to a particular account. The question was whether that money formed part of the general assets of the *Daily Express*, Ltd., in liquidation. The *Daily Express*, Ltd., were interested in the *Midland Express* being supplied with paper, and the Darwen Mills had undoubtedly a good charge if Mr. Johnston had authority to write the letter referred to. What amounted to a clear ratification of Mr. Johnston's action occurred afterwards. Two years later, in October, 1912, this very question was raised, the solicitors then acting for the *Daily Express*, Ltd., questioning whether Mr. Johnston had power to bind the company in the way he had done by his letter of October 28th, 1910. At a meeting of the directors Mr. Harrison, solicitor to the company, was requested to inquire into the matter, and at a subsequent meeting it was proposed, seconded and agreed that the priority of the claim of the Darwen Co. be admitted. He (his Lordship) thought the charge of the Darwen Co. was a good charge, and the order would be for payment of the proceeds of the debentures to the Darwen Co., and the summons would be dismissed, with costs.

Trade with Newfoundland.

Imports and Exports of Paper.

The following were the imports into the United Kingdom (and retained therein) of reel paper from Newfoundland during the last three years:—

1912	793,653 cwts.	£394,764
1911	523,116 ,,	264,562
1910	340,365 ,,	169,608

The exports of British paper to Newfoundland were as under:—

1912	4,677 cwts.	£6,000
1911	4,056 ,,	5,322
1910	4,466 ,,	5,362

THE Independent Thirteen-Em Compositor

The most independent man in the world today is the American farmer who has paid off the mortgage, bought an automobile and invested his surplus cash in some "soulless corporation." But next to him, without any doubt, stands the present day thirteen-em compositor, and if the farmer does not watch out he is going to have to come down a notch and let the compositor go up.

A thirteen-em compositor, by the way, is a man who operates a linotype machine while he is not keeping tabs on his lucky investments and the rest of the office force from the managing editor or job office owner down to the galley boy.

And this same compositor, whom you must address as an operator, owes his meteoric rise to affluence to a man named Mergenthaler. A few years ago compositors were calling Mergenthaler all the names they had seen blue pencilled in the hand-set days because he had invented a machine that would set more type than they ever dreamed of. They saw those machines glaring at them in their sleep and closing in on their jobs with a death-like grip. When they woke up they discovered that it took men to operate the machines and that a revolution was on in the printing trade. Since then they have been playing the keyboard sonato in memory of the man who jerked their high stools from under them and taught them how to operate a marvel that does all the work.

So to-day the thirteen-em compositor is the most independent man in a newspaper office or job office.

This compositor works eight hours a day. He goes out and looks after his real estate, drops in and has a talk with his banker or starts an argument with some college professor on style and diction.

Then he comes back fresh and strong and willing to edit copy, criticise the policy of the paper, tell the city editor where to head in, and take issue with the proof-reader, who has a faculty for finding errors. At the same time he is grinding out type at a rate to insure the paper going to press on time or for a form to catch the oo Miehle when she'll be ready.

Then he measures up his string and tells of the good old days when Henry Watterson was a young man and there was a prize coming to the printer who could decipher his long-hand editorials. He talks of the past—not because he wants to go back to it—but to assure himself that he has left it a long way behind. The thirteen-em compositor is a man of affairs. He holds the world by the tail and its up to him whether or not the people read the news. He handles lots of copy that is never read by anybody but himself and the proof-reader, but is all copy to him, provided it is not written in a way that gets on his nerves. He takes a chance now and then on making "English as it is spoke" out of copy that has got by the editor, and advises the man who wrote it to go to school.

The thirteen-em compositor is a power in the land. He and his machine have made it possible to make big papers and do it quickly and to produce books and pamphlets in a profusion never believed possible in the old days.—*Ogden Examiner.*

STATIONERY of the value of £2,021 was exported from the United Kingdom to Bermuda in 1912, compared with £966 in 1911, £1,072 in 1910, £1,004 in 1909, and £954 in 1908.

Treating Waste Papers.

An English patent has been granted to Messrs. J. Schimek and L. Kienzle, relating to a process whereby black and coloured printer's inks are eliminated from waste paper without deteriorating the quality of the fibre. It is claimed that the treated waste paper furnishes pulp from which fresh paper can be produced fully equal, in its qualities of colour and strength, to the paper originally manufactured. If high-class note paper or hand-made paper is treated, pulp is obtained, absolutely equal in quality to that from which the original paper was made. Whatever the quality of the paper treated, the same quality can be manufactured from the waste, the ink (printer's ink or writing ink, black or coloured) being eliminated. The process is applicable to papers sized in any way, whether half-sized, fully sized, or doubly sized, and the paper material may be of animal or vegetable origin. The original quality is also reobtained if the paper treated has become yellow with age.

The waste paper is subjected to a process which completely opens up the paper fibres. For this purpose the paper, without being beaten or ground, is treated in a bath of suitable lye, for example hydrate of potash (caustic alkali), this bath being heated to a temperature which must reach at least about 44° C., and may be increased from that value to within a few degrees of boiling point, but is in any case kept below boiling point. A small proportion of ammonia is added to prevent crystallisation of the soda.

As already mentioned, the paper to be treated is neither beaten nor ground, since this treatment causes the material to loose all its original strength. The fibres are opened without being damaged in the slightest degree, and the raw material reaches the paper vats or paper machine in a completely open condition. The patentees find that this opening up of the fibres is effectively performed by the treatment of the paper with an alkaline lye near but below boiling point, as described.

The use of heat, raising the bath to a temperature of about 44° C. or more, but below boiling point, increases the felting capacity of the fibre, and thereby enables paper to be manufactured of a strength at least equal to that of the original paper, besides recovering the original colour in all its purity. All qualities of paper, from the coarsest to the finest, can be treated in this manner with equal advantage, the pulp being adapted without material additions, to produce paper of the original quality. The ink, whether black or coloured, and other impurities, are wholly eliminated.

After being treated with the alkaline lye the pulp is washed in the vat in which that treatment has taken place, and is then directly transferred to other vats or to the paper machine.

The dry waste paper can be soaked, in any convenient vessel, and the lye then added. The washing is preferably performed in the same vessel, after the treatment with lye.

The average strength of the lye used varies from 5 per cent. to 10 per cent., but the lye may be above or below these limits, according to the quality of the paper. The heating may be effected directly by a flame or indirectly by steam-pipes or the like.

It is not essential to sort the waste paper according to its qualities. Different qualities may be mixed and treated as described.

EMPIRE HALFPENNY POST.—A letter from the Postmaster-General to the Empire Press Union states that the recently-passed Post Office Act admitting any publication issued in any part of the Empire, whether within or without the British Islands, capable of being registered as a newspaper, to the benefit of the inland newspaper rate of ½d. per copy is now in force. This is the result of efforts made by the Empire Press Union. The Postmaster-General, in his letter, says the Government arrived at the opinion that the distribution in one part of the Empire of newspapers published in another part would usefully assist to strengthen Imperial ties and might be of some service in the promotion of Imperial trade. It was with the hope that these objects might be achieved that the Government had been ready to incur the loss which would result from the concession.

NEWFOUNDLAND imported British stationery in 1912 to the value of £6,502, compared with £5,591 in 1911, £4,299 in 1910, £3,848 in 1909, and £5,127 in 1908.

THE Liverpool stipendiary, in dealing with several cases under the Shops Act the other day, ruled that picture post cards were stationery within the meaning of the Act.

Tariff Changes

AND

CUSTOMS REGULATIONS

(From the "Board of Trade Journal.")

DENMARK.

It is announced that toilet paper, with a thin coating of varnish on one side, divided into sheets of the usual size by perforation, is dutiable under No. 214 of the Tariff at the rate of 30 öre per kilo., or nearly 2d. per lb.

ST. VINCENT.

Printed forms and labels have lately been added to the Free List.

FRANCE.

It has been decided that cellular paper in sheets or bundles, for the manufacture of garlands, etc., is dutiable under No. 401 of the Tariff, as "Fancy Paper, etc."

AUSTRALIAN COMMONWEALTH.

A recently promulgated Customs By-Law (No. 271) amends By-Law No. 170 regarding the free importation of certain paper for use in the manufacture of fly papers, with effect from July 15th, 1913—the amended by-law reading as follows:—

For fly papers—

Paper in rolls *or in the flat in sizes not less than* 20 *inches by* 30 *inches or its equivalent* (provided security be given by the owner that it will be used for that purpose only, and that evidence of such use be given to the satisfaction of the collector within six months after delivery by the Customs).

[The italicised words are new.]

Bag making, packeting, and labelling machines are in future to be admitted duty free. Match-boxes, other than of paper, bearing advertisements, are to be dutiable at 30 per cent. *ad val.*, according to a recent (revised) decision. Without advertisements, the rate is only 25 per cent., a rebate of 5 per cent. being allowed in either case as far as British goods are concerned.

NEW ZEALAND.

Gummed printing paper, in strips, perforated at intervals with holes along the middle, for the manufacture of tickets, is to pay a duty of 20 per cent. *ad val.*, unless of British origin, when it is admitted free.

Sensitised post cards, without letterpress, but with printed address lines, must pay 37½ per cent. *ad val.*, or 25 per cent. if British.

ITALY.

White paper in rectangular sheets, for registering machines, having pasted thereon, along one edge, a strip of tissue, pierced by eight circular holes, is dutiable as "manufactures of paper not specially mentioned" at the rate of 70 lire per 100 kilos., or about 28s. per cwt.

British Stationery Exports to AMERICA.

The exports of British stationery to America have declined considerably since 1908 and 1909, but it is satisfactory to know that the figures of 1912 are slightly above 1911. The following are the values of the exports for the past five years:—

1912	£82,502
1911	78,432
1910	93,383
1909	131,195
1908	107,091

The imports of American stationery into the United Kingdom have increased in the past five years, as the following figures show:—

	Actual Imports.	Retained in U.K.
1912	£204,860	£175,447
1911	197,643	160,164
1910	173,255	144,926
1909	132,860	101,252
1908	131,427	99,117

German Books in England.

The following figures show the importations of printed books, including music, from Germany into the United Kingdom during the past five years:—

	Total Imports.		Retained in U.K	
	Cwts.	£.	Cwts.	£.
1912	15,558	89,843	14,181	80,088
1911	13,768	88,700	11,913	74,950
2910	11,567	78,211	10,099	65,589
1909	12,999	83,384	12,373	77,741
1908	16,270	15,761	104,454	99,178

Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be endorsed "PATENT DEPARTMENT," Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C. Telegrams: Stonhill, Fleet, London.

Applications.

23,588 GRUNEISEN, C. L., and HIRCOCK, J. T., casing-in machines used in bookbinding.
22,590 GOLBY, F. W., attachment for typewriting machines
22,601 PAYNE, H. E., typewriting machines.
22,666 LENNOX, A. B., and BREWTNALL, A. W., method of advertising.
22,677 HASLAM, W. H., book-holders.
22,711 CAMPIGLIO, A., method of typographic composition with movable types.
22,720 ELLIOTT, W. E., typographical composing and distributing machines.
22,734 HOLCOMBE, A., pencil sharpeners.
22,808 KLABER, E. H., means for advertising.
22,823 SOENNECKEN, A., fountain pens.
22,824 SOENNECKEN, A., paper rolls for roller copying machines.
22,833 BRETT, W. B., tray for printing type, printing blocks, and the like.
22,842 GORNELL, H., and WADE, O. B., stylographic pens.
22,851 WEYDE, H. V. D., writing appliances.
22,891 LEVI, E., automatic pocket stamp-moistening apparatus.
22,905 HILLIS, A. J., indexed books.
22,937 PARIS, E. K., type duplicators.
22,938 RHEINBERG, J. and E., colour photography and colour printing.
22,960 MARTIN, B. G., multiple-ring loose-leaf books.
22,982 SOMERVELL, A., clip for music sheets and the like.
22,992 LEHMANN, O., penholders.
23,016 MOORE, C. H., binders or covers for loose-leaf books and the like.

Specifications Published, 1912.

Drawing pens—Ferger; 22,219.
Apparatus for the developing of rollers for intaglio and like photo-mechanical processes—Bell and Bell; 23,411.
Machines for feeding sheets of paper—Rolier; 23,446.
Bronzing machines—Smith and Taylor, Garnett, Evans and Co; 26,951.
Printing machines—Derriey; 28,460.
Advertising apparatus—Farkas; 29,892.

1913.

Rotary reproducing, copying or printing machines—"Rapax" Apparatenbau Ges.; 5,819.
Carbon sheets and duplicate and triplicate books, or the like, for use with same—Lamson Paragon Supply Co., Clark and Evans - 6,377.
Inking tables for printing machines—Mercanti; 7,087.
Processes and apparatus for producing printed music sheets—Hess; 8,755.
Containers particularly adapted for music rolls or the like—Savoye and Zacconi; 8,788.

COMPLETE SPECIFICATION OPEN TO PUBLIC INSPECTION BEFORE ACCEPTANCE.

Advertisement or display apparatus—Fontaine and another; 22,328.

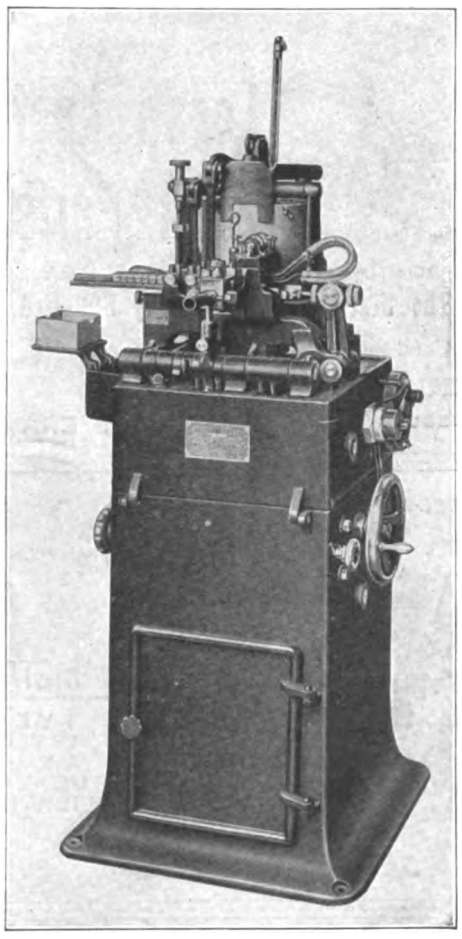
BRITISH & COLONIAL PRINTER

FOUNDED 1878. AND STATIONER PUBLISHED WEEKLY.



[REGISTERED AT THE GENERAL POST OFFICE AS A NEWSPAPER FOR TRANSMISSION IN THE UNITED KINGDOM.]

THIRTY-FIFTH YEAR.

VOLUME LXXIII. NUMBER 19.

LONDON: OCTOBER 30, 1913.

EVERY THURSDAY. PRICE TWOPENCE.

THE TYPECASTER.

You should not confuse the product of the Thompson Typecaster with that of any other machine, and for that reason we will be glad to send you some samples of the kind of type it makes. Looks like foundry type, you will say, and it does. The type made by our machine will outlast much of the foundry type made to-day. When you make it yourself you can have it just as hard as you want it, and will know then why the type you buy does not last as long as it should.

When we talk about type quality we like to refer to that masterpiece of the printers' art—the "Inland Printer." Do you know that all the ad. type used in this handsome publication is made by their Thompson Typecaster? Fact. That is about all we need say on quality.

The advantage of making your own type is that you can have just what type you most need in as large quantities as you want it, and when changes are demanded, dump your old type into the metal pot and modernise it—recast it into new, up-to-date type.

More publishers are doing it every year—all will be doing so before long. When you get to the point of deciding between buying more type or installing a typecaster, call on us. We want a chance to show you.

It is the only machine which can cast type from Linotype matrices.

It is the only machine which casts type from 5 to 48-point.

It is the only machine which produces different combinations of nicks in any body.

It is the only machine which delivers the type on the receiving stick, ready for inspection or the case.

It is the only machine which can cast logotypes without special matrices.

It is the only machine which can cast mortised round corner pieces and the like.

The cost of any mould body is only £2 10s.

Matrices are exchanged at 12s. per fount.

The price of machine is inclusive, equipped to cast type of any eleven desired sizes from 5 to 48-point, and low quads and spaces in like sizes, together with motor, thermometer, gauges, and tools, we mean that you cannot spend another farthing to enable you to cast type from Linotype, Compositype, or our own make of matrices. Look over our matrix catalogue. We are adding new faces regularly.

The matrices themselves we loan to you from our libraries in London, New York, Chicago, San Francisco. No daily rental charges are made. Merely an exchange fee of 12s. whenever you secure a fount and return another. An inexpensive, economical and satisfying plan. It is all in the contract, and we live up to it.

No one who ever investigated the Thompson Typecaster ever decided on another machine. We are waiting to show you why.

P. LAWRENCE Printing Machinery Co., Ltd.,

THE PRINTING ART.

An Illustrated Monthly Magazine of the Art of Printing and of the Allied Arts
Issued by The University Press, Cambridge, Mass., U.S.A.

THE PRINTING ART is the most beautifully printed periodical in America. It is entirely different from the other printing magazines, in that it does not go into the technical details of the crafts it represents, but gives **actual examples** which are of service to the publisher, printer, advertising man and book lover. It is full of suggestion for typography, design, colour of ink and selection of paper stock, and will be found invaluable by those desiring to improve the quality of their work. PRICE 21/- per year. Single copy 2/-. Send this amount for sample copy to—

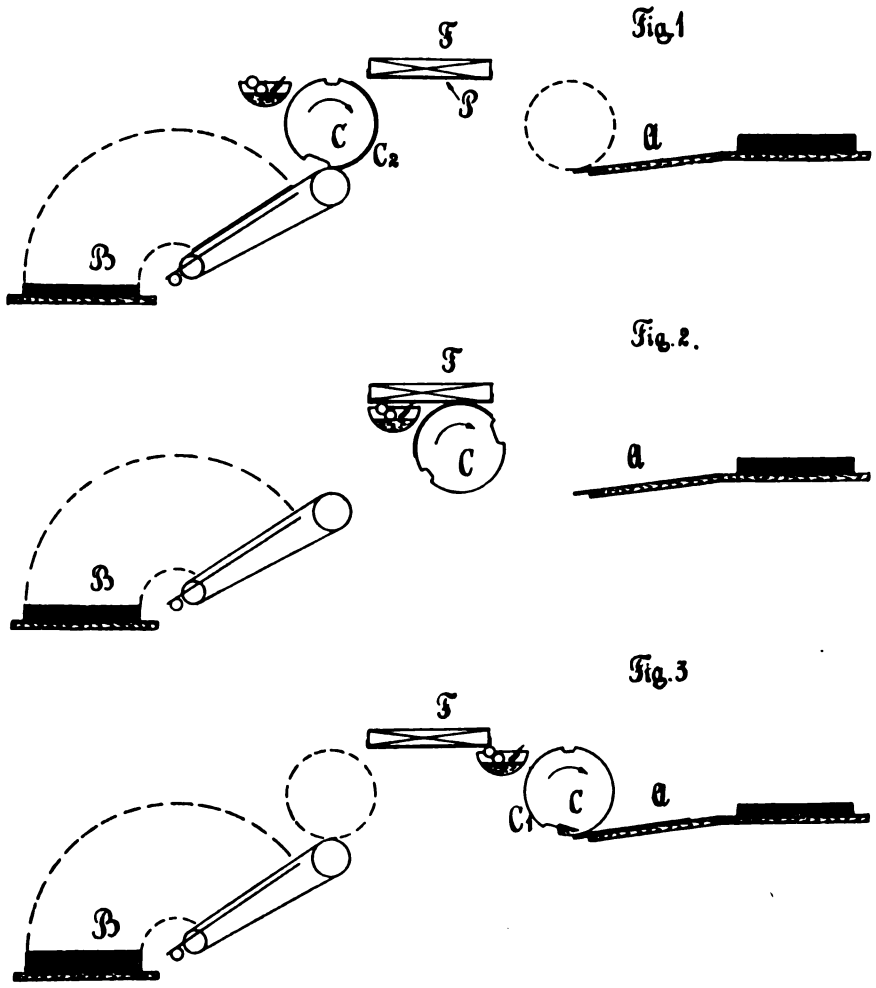
The Surface Speed of Rollers.

A good deal of difference in opinion exists among machine-minders as to the setting of machine rollers, and the roller makers also have much to say about this difficulty, which, however, is not attributed directly to a change in the diameter of the roller but to the manner in which they are set. The following is republished from a pamphlet issued to the trade by a well-known roller maker:—"Care must be used in setting the form roller against the metal rider, or vibrator. It must be set lightly to the rider, as well as lightly to the form. The rider is driven by gearing from the toothed rack, and the form rollers are driven by the revolution and friction of the riders, and are not driven by the form. So, if the rollers are set too hard to the riders, then the axis of the rider will be nearer the axis of the form roller than it would be if set lightly. Consequently the rider drives the surface of the form rollers at a speed differing from the speed of the form. The roller in such a case must partly roll and partly slide or scrape over the form. That is apt to melt or injure the roller and 'fill up' the form. You can tear up or melt any good form roller by uneven or hard setting."

There are certain deductions, says the *American Pressman*, to be drawn from the above statements that have a direct bearing upon the general subject of the relation of roller diameters to surface speed. If any number of cylinders, of a non-resilient substance, regardless of diameters, are so arranged that they can revolve in contact with each other, the surface speed of any one of them will be found to be relatively the same with all of the others, although the speed on the axis of each will be different. But this law will only hold good when the substances of which the cylinders are composed are non-resilient.

A form roller on a printing press is decidedly resilient and the law of surface speed will not, under all circumstances, prevail. The radius of a circle, or of any cylindrical object, is the distance of half the diameter of the same, which in referring to a form roller is the distance from the centre of the roller stock to the surface of the roller. If the length of the radius on one side of the roller is shorter than on the other, which always happens when a roller is cast out of centre, and which condition can be duplicated by setting the roller harder against the vibrator than against the form, or *vice versa*, the result will be an uneven speed of the surface, and a dragging or scraping motion of the surface of the roller. The roller will readily heat and run down when set as above indicated. The motion of the body of the roller will really be cam-like or elliptical.



It frequently happens that when a roller is even a sixteenth of an inch larger than its cast diameter, due to the absorption of moisture, and is being used as an "inside" roller, that the limit of adjustment of the roller socket is not sufficient to permit of an even setting against the vibrator and form, and a drag results. It would be advisable to see to it that a smaller roller, if one is on hand, is used in that position. Be careful to observe the rule to set the roller lightly against both form and vibrator, and if necessary for any reason to set the roller hard against the form, then see to it that the roller is set the same against the vibrator, in order to insure the same surface speed of the roller in relation to the vibrator and form.

A properly set, well-seasoned and suitably-conditioned roller will not drag or be cut by the form; will return satisfactory service for the care bestowed upon it, and will last indefinitely, even being possible to be carried over from season to season.

Intaglio Printing.

Improvements in Flat-Bed Machines.

An invention that has been patented in this country by Mr. August Pels-Leusden, a Würzburg engineer, and Messrs. Koenig and Bauer, of the same town, relates to intaglio printing machines, and has for its object to improve the manner in which the form is inked. The patentees point out that in modern intaglio printing a very thin fluid ink is used, which is applied to the whole surface carrying the pictures or characters, and subsequently removed by a doctor from places where there are no illustrations or text and must remain blank in the proof. The doctor is an elastic steel plate and is moved like a scraper over the inked surface from which it removes the excess of ink by pushing the same in front of it. When the forms are complete cylindrical surfaces this operation is fairly simple. The ink reservoir is arranged under the cylinders constituting the form, and the ink is applied by a roller or brush. The doctor is arranged in such a manner that the ink it removes can readily return to the reservoir. In the case, however, of flat-bed intaglio presses, that is to say, printing presses having flat forms, the conditions are very much less favourable and the difficulties of carrying away the colour which is removed by the doctor are chiefly responsible for the absence of a good flat-bed press for intaglio printing. Previous constructions are substantially similar in form to typographic flat-bed presses and use an intaglio form, the printing surface of which faces upwards and the excess of ink applied to such printing surfaces is collected and removed by the doctor. During this process, as the form is moved under the doctor, the quantity of ink constantly increases, and at the end of the movement all the excess of which has been applied must be returned to the inking trough or reservoir. This, says the patentees, entails a waste of ink and makes the form carrier dirty, which renders continuous working impossible.

According to this invention this difficulty is obviated by the form carrier together with

Digitized by Google

the flat form being arranged above instead of below the impression cylinder, and either the form carrier is reciprocated above the impression cylinder and inking device, or the impression cylinder and the inking device are reciprocated under the form carrier. The form therefore faces the cylinder, that is to say, is directed downwards, and it is possible to arrange the inking device in exactly the same manner as the rotary intaglio presses.

In the accompanying drawings which show diagrammatically three forms of machine according to this invention. Figs. 1 to 3 illustrate the case in which the form-carrier is fixed and the impression cylinder and inking device are reciprocated below it. Figs. 4 to 6, a machine in which the impression cylinder and the inking device are stationary, while the form-carrier is reciprocated above the two, and Fig. 7 shows a machine employing an endless web of paper.

In the construction illustrated C is the impression cylinder on which a sheet is placed from the laying table A, B is the delivery mechanism which deposits the printed sheet

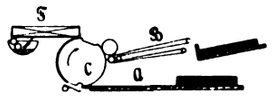


Fig. 5

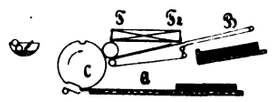

Fig. 6

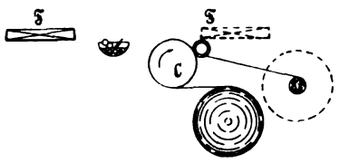

Fig. 7

on the delivery table. To the under surface of the form carrier F is secured by any suitable means the flat printing plate P, the text form of which faces downwards. The impression cylinder and the inking device in the example shown in Figs. 1 to 3 and the form carrier in the construction illustrated in Figs. 4 to 6, are reciprocated in the well-known manner by any suitable means. In each case the machine is shown in three positions, namely, in the initial, central and final positions. Below the form carrier is arranged the well-known inking device comprising the inking trough and roller or brush which applies the ink to the form from below during the reciprocation, and the doctor which removes or scrapes off the excess of ink from the surface of the form. It will be understood that the position of the doctor must be such as to preclude any damage to the form, and for that reason it must be suspended in an oscillating manner as usual and controlled by suitable links which produce the oscillation at exactly regulated time intervals. It will be seen at once that the ink removed by the doctor can easily flow away and return to the tank, so that ink can never accumulate behind the doctor, and the danger of making the form carrier dirty is avoided as completely as when cylindrical form carriers are used.

Instead of one doctor, two or more may be simultaneously used. Moreover, it is immaterial for the purpose of the invention whether the doctor removes excess of ink only during the movement in one, or in both directions, and also how and at what angle to the horizontal the reciprocation of the form carrier or of the printing cylinder is effected and the printing cylinder rotated. The proportion between the size of sheets and the circumference of the impression cylinder is also immaterial. It will be understood, however, that the form and the impression surface must coincide during the printing period and have the same direction and length of movement. The following are the patentees' claims:

In an intaglio printing press having a flat form-carrier and an impression cylinder mounting the form on the under surface of the carrier above the impression cylinder so as to face downwards and supplying this form with ink from below by reciprocating the form or inking mechanism relatively to each other as set forth.

In an intaglio printing press the combination with a flat form-carrier of a form mounted on the underside thereof and an impression cylinder, inking device and doctor arranged below the form and adapted to reciprocate relatively thereto in the manner and for the purpose set forth.

The flat-bed intaglio printing press for single sheets or continuous webs as described and illustrated in Figs. 1 to 3, or in Figs. 4 to 6, or in Fig. 7 of the accompanying drawings.

Our Paper Trade with Russia.

Imports and Exports.

The imports of paper, etc., into the United Kingdom from Russia during 1912, and the four preceding years were as under:—

	Total Imports.	Retained in U.K.
1912	£351,595	£350,852
1911	389,892	388,907
1910	326,027	325,028
1909	257,462	256,313
1908	303,890	302,826

The following figures relate to the goods retained in the United Kingdom:—

PRINTINGS AND WRITINGS.

1912	67,056 cwts.	£42,397
1911	91,144 ,,	48,572
1910	26,813 ,,	15,806
1909	4,047 ,,	2,381
1908	7,719 ,,	3,202

PACKINGS AND WRAPPINGS.

1912	290,656 cwts.	£149,839
1911	305,759 ,,	182,560
1910	244,726 ,,	141,430
1909	177,847 ,,	107,332
1908	269,980 ,,	162,995

STRAW, MILL AND WOOD PULP BOARD.

1912	408,895 cwts.	£158,616
1911	393,639 ,,	157,775
1910	410,537 ,,	167,742
1909	366,678 ,,	146,666
1908	346,537 ,,	136,629

The exports of British paper to Russia were as under:—

1912	4,549 cwts.	£15,055
1911	5,155 ,,	17,664
1910	3,549 ,,	13,918
1909	2,511 ,,	11,571
1908	3,071 ,,	11,341

THE late Sir F. A. Eaton, editor of "Murray's Handbook on Egypt," etc., has left estate of the value of £2,870.

THE *Drapers' Record* has published a book entitled "Fighting the Enemies of the Shopkeeper," in which is pointed out the loss to the retailer through the competition of co-operative societies, the giving of special discounts, coupons, and other methods of reducing the profits of the shopkeeper. The writer is Mr. Maurice C. Moore, and he handles his subject in a convincing manner, pointing out the remedies for the evils he exposes. The book is published at 6d. net.

Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be endorsed "PATENT DEPARTMENT," Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C. Telegrams: Stonhill, Fleet, London.

Applications.

23,039 LANG, A. B.D., and POWELL, J. A., apparatus for displaying announcements, advertisements, and the like.

23,072 FALLENSTEIN, R., method and device for the multiple reproduction of drawings, documents, or plastic bodies in the same or a different scale.

23,095 FORWOOD, S. B., files for papers or the like.

23,114 LYONS, I. N., tag for securing papers and the like together.

23,116 LINOTYPE AND MACHINERY, LTD., galley mechanism for repeating and non-repeating line-casting typographical machines.

23,125 DUTHIL, A., files for letters or the like.

23,128 TURKIN, N. W., manufacture of paints and printing colours.

23,129 TURKIN, N. W., processes for colour printing

23,141 SPIESS, G., paper sheet-feeding machines.

23,183 VICKERY, F. W., machines for cutting paper and other materials.

23,187 WALKER, A. H., typographical machines.

23,208 HIRCOCK, J. T., machines used in bookbinding.

23,212 HARTLEY, J. E., and HOWL, J. A., pocket cases, letter-cases and the like.

23,213 IMPERIAL TOBACCO CO., LTD., and HUNT, P. A., advertising devices.

23,288 GIL, J. D., printing processes and apparatus therefor.

23,310 KLEIN, A., and GREENBOWE, J. W., pen clip.

23,316 ROSSLER, H., ink blotter.

23,358 GILKE, K., automatic feed and delivery device for platen printing presses.

23,379 VALENTINE, H. J., cut out books.

23,391 GILBERT, F., bronzing apparatus.

23,392 GILBERT, F., bronzing apparatus.

23,408 CLOUGH, H., sheet delivery mechanism for printing machines.

28,419 THOMPSON, H. J., artists' sketch books.

23,469 HOULTON, W. AND S., machines for trimming paper, cardboard and the like.

23,475 BLAND, W. G., devices for affixing, cancelling and severing stamps and the like.

Specifications Published, 1912.

Holders for pencils and other utensils—Pancke; 22,711.

Method of and apparatus for manufacturing typewriter ribbon—Boult; 22,862.

Copy-holders for typewriting machines—Balaban, 23,129.

Pocket clips for fountain pens, pencils and the like—Brecknell; 24,401.

Holders for erasers—Yelf; 27,010.

1913.

Stencil duplicating apparatus—Dick; 4,167.

Card index and filing systems—Stillwell; 4,849.

Envelope making machines—Mathys; 6,350.

Inking mechanism for printing machines—Smith 11,451.

Institute of Printers and Kindred TRADES.

Annual Conversazione.

One of the most successful meetings of many held by the Institute of Printers and Kindred Trades of the British Empire took place on Wednesday evening, 22nd inst., on the occasion of the fifteenth annual conversazione. The headquarters of the Institute, St. Bride Foundation, was quite *en fête* with floral and other decorations, and a continuous programme of entertainment was provided from 6.45 to 11 p.m., one of the largest attendances of members and friends of both sexes testifying to the popularity of the institution and the energy and public-spirited enterprise of the joint hon. secretaries, Messrs. C. J. Drummond and W. H. Burchell, with their willing coadjutors on the executive council. A worthy object of the Institute is to furnish a social centre for employers and representative men employed or interested in the various associated crafts, and this side of the Institute is being well developed, as was instanced at this function with its excellent programme of music and dancing, etc., while the endeavour "to aid, promote, assist and extend and encourage the study and practice of the Art of printing and its kindred trades," found expression in a very interesting exhibition of some out-of-the-way types of printing.

Sir George Riddell, *President.*

The programme opened with some popular selections by the string band of the 7th City of London Battalion, in the large hall, during which a formal reception was held. Sir George Riddell, who is this year's president of the Institute, was present and received the company, which numbered about 200 ladies and gentlemen. The following capital programme of music was carried out under Bandmaster A. F. Day:—

March...	...	El Abanico ...	Jowaloyes
Waltz...	...	Nights of Gladness ...	... Ancliffe
Barcarolle from Les Contes D'Hoffmann			.. Offenbach
Intermezzo...	The Wedding Glide ...		... Hirsch
Selection ..	The Quaker Girl ...		...Monckton
Entract	March of the Mountain Gnomes		Eilenberg
Waltz...	... Amoretten Tanze ...		... Gungl
Two Step ...	Hitchy Koo ...		... Pether
Waltz...	... The Girl on the Film ..		... Sermya
March...	... Distant Greeting ...		... Doring

By 8 o'clock the hall had been arranged for a Café Chantant, and for two hours a large and appreciative audience, entirely filling the hall, seated at small tables and waited on with light refreshments, listened to the following excellent programme, carried out under the direction of Mr. Brett Plummer, Mr. H. J. Goss (chairman of council) presiding:—

Song... Blow, Blow thou Wintry Wind Sargent
Mr. JOHN G. DEAN.

Song... ... Beyond the Dawn ... Sanderson
Miss ETHELWYNNE WYATT.
(Accompanied by Miss MABEL WYATT.)

Humorous Song My Word ...Sterndale Bennett
Mr. WM. BRETT PLUMMER.

Interlude ... Miscellaneous Mimicry ... ...
Mr. JACK TREVAL.

Violin Solo ... Scotch Melodies Arr. by M. Seymour
Miss MOLLIE SEYMOUR.

Sleight of Hand Magic... ... ...
Mr. OLIVER DALY.

Song Somewhere a Voice is Calling ARTHUR TATE
Miss WINNIFRED SHEARS

Song ... ... The Lute Player ... Allitsen
Mr. JOHN G. DEAN.

Song ... ... The 11.69 Express ... R. Bagnall
Mr. WM. BRETT PLUMMER.

Song ... .. Beloved it is Morn ... Aylward
Miss ETHELWYNNE WYATT.
Accompanied by Miss MABEL WYATT.

Humorous Interlude The Party ... ...
Mr. JACK TREVAL.

Ragtime Song ... On the Mississippi ... .. Berliss
Miss MOLLIE SEYMOUR.

Humorous . The Night Watchman's Story ... ...
Mr. OLIVER DALY.

Song ...A Little Love, a Little Kiss Lao Soleser
Miss WINNIFRED SHEARS.

Accompanist, Mr. MARK ATWOOD.

For those who enjoy a quiet game of cards—and there proved to be a great many—a "Short Whist Drive" was held in the Small Hall, under the direction of Messrs. Alfred Langley and R. B. Brett, beginning at 9.30 p.m., and some handsome prizes were awarded to the winning ladies and gentlemen. The prize winners were Mrs. Pitman, Mrs. Watt. Mr. C. S. Yates and Mr. Dickerson. The latter part of an enjoyable evening was spent in dancing, the M.C. being Mr. Alfred Langley.

During the evening the Lithographic School, the Monotype Room, the Letterpress Printing School, the Linotype School and the Composing Room were open for inspecttion, and the Principal, Mr. J. T. Riddell, conducted parties through the Printing School, thus given them an opportunity of seeing the useful work that is being done.

In the Lower Hall the exhibition of Oriental, Slavonic and other types of printing from the St. Bride Foundation Collections, was held, all instructively arranged by Mr. R. A. Peddie, Librarian of the Typographical Library. The main section of the exhibition was arranged for the purpose of showing the various types (other than Gothic and Roman) which have been used since the invention of printing. Beginning with a collection of polyglot volumes, generally editions of the Lord's Prayer printed to show the many kinds of type possessed by a printing office, there followed some books in the italic letter first designed for Aldus by the great painter Francia. Next came a row of volumes in Greek, including the editions of Homer printed by Foulis in Glasgow and by Bodoni in Parma. Then a selection of Hebrew books showing the various forms and sizes of this character. The Irish letter next in order was interesting and the Library is very rich in books printed in this type. A considerable proportion of the books in Irish types were printed abroad, and books were shown from the Rome, Louvain and Paris presses.

One or two volumes in Anglo-Saxon showed types originally cut by John Day, the famous English typographer of the sixteenth century. Then in order followed specimens of Arabic, Turkish and Persian types, all very similar in appearance.

Of the other Oriental languages, specimens were shown of Armenian, Sanskrit, Ethiopic, Coptic, Samaritan, and others, while any variety not possessing a book to itself could be found in one of the polyglot editions of the Oratio Dominica or similar works.

The printing of music was illustrated by facsimiles and original specimens from the earliest period. The liturgical music printed in red and black was followed by the one impression method where the note and stave are in one piece. Later volumes showed lithographed and engraved music.

Down the centre of the Hall was placed a collection of documents illustrating the early history of organisations in the printing trade both of masters and men. This collection afforded an interesting study for comparison with the methods of such societies to-day.

Mr. A. H. Motley, Managing Director of the Printex Co., Ltd., Central House, Kingsway, London, W.C., exhibited various designs and characters of work printed from plates, engraved as well as lithograph and letterpress, which were produced by the Printex Process, also stamps printed from engraved plates for the British Government. Attendants at the exhibit answered the questions of curious inquirers and explained the features of the process.

British Imports of Paper.

Ports of Landing.

The following figures show the respective quantities and values of paper (all kinds) imported at the various ports named during the year 1912 as compared with 1908:—

ENGLAND.

Quantities.—Cwts.	1908.	1912.

THE October number of the *International Theosophical Chronicle* (illustrated, monthly, 6d. net, Theosophical Book Co., 18, Bartlett's-buildings, E.C). has several features of unusual interest. Dr. Gertrude van Pelt., B.Sc., writes on the question, "If a man die shall he live again?" and argues that as the atoms of our bodies live over and over again, and as energy is known to be indestructible and not even the crudest form of matter can die, surely man who is the synthesis of all on the earth must persist as a living entity although his body changes and passes away. An article on "The Small Things of Life," by Stanley Fitzpatrick, is interesting, and so are the reports of some of the delegates' speeches at the International Theosophical Peace Congress at Visingse, Sweden, with some excellent half-tone illustrations of the events at the Congress and the Raja Yoga students from Point Loma, California, who recently visited London, complete a very readable number.

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help a..d an ornament thereunto."
FRANCIS BACON, Baron Verulam.

The printing world was very well represented at the Monday lunch party of the Executive Club at the Birkbeck Café in High Holborn, on October 27th.

o o o

It was an interesting occasion, as it was by way of being a welcome home to Mr. Sheldon, who has so carefully and serviceably addressed himself to investigate the "laws of business science," and of whose work in that direction the Executive Club is one outcome.

o o o

To be sure he is an author too. Witness his works on "The Science of Salesmanship" (1902), "The Science of Efficient Service" (1910), and "The Science of Business Building" (1911).

o o o

Some one had induced Mr. Reginald Lake, Secretary of the Master Printers' Federation, to join the company. I wonder if he could be induced to give one of the Monday half-hour talks at this lunch party (1.30 to two o'clock)? His exceptional experience should furnish forth very interesting matter; and he would be sure of an attentive audience, and one that knows a good thing when it hears it.

o o o

Mr. W. Gamble (of Penroses, Ltd.), and of the "Process Year Book," had also come to lunch—and to make a grave mistake. He forgot himself entirely.

o o o

For, when proposing a motion welcoming Mr. Sheldon back from his travels, he entered a half-pathetic lament—"If we can only encouiage our employees to think more deeply. . . . It is a thing we cannot teach ourselves. We must look to such institutions as this to do it for us."

o o o

I say he forgot himself because he has proved that he can do this. He has written a very capital little book dealing in his own practical and happy way with business science. I don't say he has co-ordinated a business philosophy. But it's been good for us all that he's thrown off these occasional sparks.

o o o

In the intervals, understand, of running a great, prosperous, and always freshly-branching out business, of issuing a yearly technical volume, of bearing a share of social and Church work out Finsbury way, and of photography galore. For he's a man of his hands, too.

o o o

Mr. Fry of Fry's metal was another of the lunchers, and by the way the Eyre and Spottiswoode foundry was represented, and so was the Monotype, and so were other departments of the printing world.

o o o

Mr. Sheldon's talk related to what he called the basic law of service.

o o o

Incidentally he said that, roughly speaking, 5 per cent. of the people in the world employed the other 95 per cent. But he too forgot just for a moment that not all the other 95 find employment at all. That's the trouble.

o o o

"No one who has his ears to the ground at all," he proceeded, "but hears rumblings heralding the approach of a storm among that 95 per cent." "There seems," he added, "to be among the 5 per cent. almost as great indifference to the matter of that oncoming storm as there was among the aristocracy of France, when the mutterings of the French Revolution storm fell upon their ears unheeded."

o o o

One need not travel. One need only read newspapers to be apprised of oncoming trouble, or the threat of trouble. Why was it unheeded? Was it that newspaper reports were discredited? Was it mere indifference as to what might happen? Was it a feeling of individual security in any event? Or was it a fatalist conclusion that there was no remedy and things must take their course?

Perhaps, however, his forgetting was more in form than in fact. For note how he followed on.

o o o

There *is* a remedy, says Mr. Sheldon.

o o o

It is that very unsensational and very old, but he believes quite adequate, remedy—more enlightenment, and particularly more enlightenment in regard to the basic laws of service.

o o o

"There is no crime but ignorance"—at any rate there is no mistake but ignorance.

o o o

Let, then, the reports of the mutterings be better accredited, for the common reproach of their being exaggeration may be an exaggeration itself.

o o o

Let the indifferent be aroused. Their indifference is probably at best partly a pose.

o o o

Certainly no one can maintain self-respect and be wholly unconcerned by disorder and disaster threatening the community.

o o o

There are, the Sheldon argument proceeds, three powers in business—money power, mechanical power and man power.

o o o

He referred to a man who told him he never dared to give a friendly recognition to any of his hands. "Afraid?" Mr. Sheldon asked. "No, not exactly; but if I give them an inch they'll take a mile. I must be boss here and let them see it."

o o o

He was afraid, I consider. He was afraid of his own weakness.

o o o

That man, said Sheldon, only realised one of the powers, the money power, and that power was a cause not an effect; for money power and mechanical power were merely effects, the cause of them both being the third power, the man power.

o o o

Just as fire is a cause and heat is an effect, so service rendered is, he said, a cause and payment received, an effect. He believed the degree of the heat (or the payment) was in direct proportion to the volume and intensity of the fire (or service rendered).

o o o

Speaking I suppose of the whole field of activity. He doubtless could cite individual cases which carry a very different suggestion. The man who served us all by inventing the life-boat died in the workhouse.

o o o

Mr. Sheldon declared he was not taking sides as between the 5 per cent. or the 95 per cent., but simply impartially noting things, when he said that there did appear to be a considerable amount of holding back of service on the part of the 95 per cent.; while also in the 5 per cent. the same thing could be noted.

o o o

I've often thought that more people preach Sabbath resting than preach (to themselves at any rate) "six days shalt thou labour."

o o o

Mr. Sheldon seems to be confident that sooner or later increased value of service will obtain increased payment. I even understood him to say that this "would take care of itself."

o o o

And certainly I do remember a man saying to me, "If Blank's health had not broken down I should never have let him go if I had had to give him half my business."

o o o

Proprietorship of a business carries with it, Mr. Sheldon urges, greater responsibilities than the mere handing out of the money bag at the week end. And he believes that business men can do much more than they do now to improve the relations of the 5 and the 95 per cent.

o o o

As to that I will interject that one very good way of making your workpeople believe you really do desire their well being is —— to really desire it.

o o o

Honesty's a good spokesman. It "states the case" well.

o o o

But I will say that I like the "man power" of the Sheldon argument. I understand, at any rate, I hope he means man power considered as a unit; one, a simple elemental integral thing. The "man of ability" of Mallock's superficial economics is, I suggest best looked upon as a multiple of an average man; rather than as a being of another order.

There is too much tendency to glorify and affirm the necessity of the man of Ability, with a capital A, as if we have not all of us germs of ability with a small but quite sufficient "a." We all have the germ but we have far too unequal chances of developing the germ.

o o o

I have no time to criticise Mr. Sheldon. I might add that Mr. Gamble made a capital short speech. Efficiency, he said, is the power to do; which comes from knowledge, and knowledge ought not to be confounded with mere amassing of information. Knowledge must be knowing—and knowing how. There is too much action which precedes thinking, Mr. Gamble also urged.

o o o

Any readers who would like to join that lunch party at 331, High Holborn, at the Birkbeck Café at 1 o'clock on Mondays would, I am sure, be welcomed. They would be committing themselves to nothing.

o o o

We have had, and still have, a costing reform in printing. The next reform must be an improvement in salesmanship. Mr. Howard Hazell was constantly implying or even expressing this at the Costing Congresses.

o o o

Attendance at these lunches would do no little towards that end; and incidentally would help, I think, towards other business reforms.

FRANK COLEBROOK.

British Imports of Paper
FROM BELGIUM.

The following were the British imports of paper from Belgium during 1912 and four preceding years:—

	Total Imports.	Retained in the U.K.
1912	£423,106	£420,881
1911	413,888	411,402
1910	406,122	403,802
1909	410,704	408,084
1908	468,408	464,813

According to the official classification the following goods were retained in the United Kingdom:—

PRINTINGS OR WRITINGS.

	On Reels.	
1912	5,515 cwts.	£4,720
1911	3,038 ,,	2,766
1910	6,481 ,,	6,407
1909	5,994 ,,	5,109
1908	15,232 ,,	11,655
	Not on Reels.	
1912	103,679 cwts.	£95,879
1911	104,146 ,,	110,773
1910	111,285 ,,	110,991
1909	152,485 ,,	145,126
1908	171,059 ,,	156,351

PACKINGS AND WRAPPINGS

1912	277,909 cwts.	£225,127
1911	261,218 ,,	210,765
1910	242,780 ,,	191,580
1908	194,587 ,,	150,460
1909	209,125 ,,	170,223

PRINTED PAPER.

1912	45,071 cwts.	£95,155
1911	43,000 ,,	86,594
1910	48,095 ,,	94,824
1909	55,594 ,,	107,389
1908	61,947 ,,	126,584

Belgian Demand for British Paper.

The following were the exports of paper —all sorts—from the United Kingdom to Belgium during the last five years:—

1912	76,678 cwts.	£107,397
1911	62,324 ,,	90,999
1910	54,862 ,,	83,497
1909	44,855 ,,	68,581
1908	37,095 ,,	57,071

British Paper in Egypt.

British exports of paper to Egypt during 1912 and the four preceding years were:—

1912	31,870 cwts.	£49,922
1911	33,769 ,,	47,856
1910	30,943 ,,	45,039
1909	30,914 ,,	44,985
1908	31,958 ,,	48,209

The exports of foreign paper from British ports to Egypt last year amounted to £1,562, and in the previous year to £2,393.

Trade Notes.

THE death has occurred of Mr. David Kirkwood, of the firm of Messrs. Hill and Kirkwood, printers, etc., Moorfields, Liverpool.

WE understand that Mr. Herbert Standring, who has been connected with the *India-rubber Journal* for the past 28 years, has severed his connection with that paper.

THE death occurred last Sunday, at Berkhamstead, of Mr. Robert Gee, editor and principal proprietor of the *Accountant* and the *Accountants' Journal*, which latter was started by deceased in 1883.

The return golf match between teams representing the London and Provincial Press was played, on Tuesday, on the course of the Wallasey Club and resulted in a victory for the Provincials by an aggregate of 29 games to 10.

MR. R. H. BODGER, who has been on the staff of the *Peterborough Standard* for nearly three years, has obtained a journalistic engagement with the Eastern News Agency, the Associated Press of India, and the Indian News Agency, and is to sail for Calcutta on November 8th.

THIRTY-ONE Edinburgh printers' apprentices have come out on strike, as they object to being employed under piece-work conditions. The firm concerned is Messrs. Ballantyne, Hanson and Co., printers and bookbinders, Causewayside, and it is the lads in the case-room who have struck work.

THE current issue of the *West Ham Electrical Bulletin* contains an interesting illustrated description of the printing ink works of Messrs. Johnstone and Cumbers, at Sugar House-lane, Stratford, E. The motive power at these works is provided by electric motors driven by current from the West Ham Corporation's mains.

THE Miehle Printing Press and Manufacturing Co., of Chicago, announces that Robert Miehle has again associated himself with the company, under an arrangement which for a long terms of years insures to the company the benefit of Mr. Miehle's experience, inventions, and advice in connection with the development of its printing machinery.

MR. HENRY SYMONDS, general manager at the well-known firm of John Bellows, printers and publishers, Eastgate, Gloucester, died with painful suddenness on Saturday morning. Mr. Symonds was passing through the shop on his way into the works and was conversing with one of the employees, when he was observed to fall, and was found to be dead.

AT Crediton, Devon, last Thursday night, Harold Glanville, foreman printer, and Wm. Luxton, were in the works together when shots were heard, and on the building being entered, both were found lying on the floor with shot wounds. They were taken to the Devon and Exeter Hospital, where Glanville died shortly afterwards. Luxton is in a very serious condition.

AT the 52nd election of inmates of the Printers' Pension Corporation Almshouses at Wood Green, at the St. Bride Foundation on Monday, two male candidates were elected from twelve male and female applicants. There were four candidates for the orphanage, and three were elected. A gratuity of £1 was given to the unsuccessful applicants for almshouses by the North London Auxiliary and the South London Auxiliary.

WE understand that Mr. Sherwin is severing his connection with Messrs. Grant, Legros and Co., Ltd., the makers of the Davis Typecaster, and that Mr. H. Gordon Webb has been appointed sales manager of the company as from November 1st next. Mr. Webb has been representing the firm for nearly two years past and is known personally to a good many of the customers, so that he has every expectation of being able to continue the policy of good service which has been so successfully carried out by Mr. Sherwin.

TENDERS ACCEPTED—For printing and stationery for three years for the Bermondsey Board of Guardians; C. Knight and Co., Ltd., Tooley-street, S.E.; S. T. Green, Albion-buildings, Aldersgate-street, E.C.; Simson and Co., Ltd., Market-place, Hertford. For supplying printing and stationery for the Guardians of Elham Union; printing, Kentfield, Tayler and Co., Ltd., Grace-hill, Folkestone; stationery, J. Lovick and Sons, High-street, Hythe. For printing, for the Thanet Board of Guardians; Haddon, Best and Co., St. Bride-street, E.C. For the supply of 10,000 attendance registers, for the Lancashire Education Committee; J. Heywood, Ltd. (recommended for acceptance).

THE death has taken place at Rutherglen, near Glasgow, of Mr. Thomas Miller, of the firm of Reid, Watson and Miller, wholesale stationers, Hutcheson-street, Glasgow.

ACCORDING to *Kemp's Mercantile Gazette* there was only one failure in the printing and stationery trades of England and Wales for the week ending Friday, October 24th, the corresponding week in 1912 showed ten.

AT one of the Glasgow Police Courts two stationers were last week charged with offering for sale and selling indecent post cards. The magistrate characterised the offence as very objectionable and said he would do all in his power to suppress the exhibition of such pictures. He fined one culprit £1 1s., with the alternative of 14 days' imprisonment, and the other 10s. 6d., the alternative being five days' imprisonment.

"ARE servants of servants the servants of those servants, or the servants of the original employer?" was the question involved in an appeal under the Insurance Act, heard in the King's Bench Division on Friday. The judges upheld the decision of the magistrates—that several girls employed by a Dartford printer were not the servants of a silk firm which employed the printer. The owners of the silk factory, therefore, were not bound to pay the girls' contributions under the Act. The appeal was dismissed with costs.

HISTORIES of several railways have been published, but so far no complete history of the "Premier Line," the famous London and North-Western Railway, has been published. Now the omission is to be made good, as the "History of the London and North-Western Railway" has been written by Mr. Wilfred L. Steel, who has spent much time in collecting and collating his facts. The volume, which will be of a size befitting the importance of the subject, is being published by the *Railway and Travel Monthly*. A feature of the book will be the large number of excellent illustrations.

IN the fourth yearly report of the North Wales Advertising Board, which is composed of twenty-one seaside and health resorts in North Wales, emphasis is laid on the value of newspaper advertising. The committee point out that during the past year they have concentrated their efforts on Press advertising, the scheme covering the whole of the kingdom. With increased support, there was no reasonable limit to which this method of publicity may not be carried out, thus proving advantageous to every resort in the district. The total cost of the board's advertising for the year amounted to £633 8s. 11d.

THE monthly meeting of the Executive Committee of the Scottish Newsagents', Booksellers' and Stationers' National Union was held in Glasgow, on Thursday evening last, Mr. Charles Young, president, occupied the chair. It was arranged that Mr. MacLaren should attend a conference in Edinburgh with a view to the federation of the trade associations in Scotland. Mr. Young drew the attention of the committee to the proposed legislation to limit the hours of shop assistants to 60 hours a week, inclusive of meal times. The meeting was unanimous that such a limitation in the case of newsagents' shops was quite unworkable.

THE DECLINE IN POST CARDS.—The decrease in the number of post cards sent through the post has led Sir Adolph Tuck, the head of the firm of Raphael Tuck and Sons, Ltd., the well-known Christmas, post card, and art publishers, to say that his experience is that: "People are spending just as much on picture post cards as ever, but they demand a better quality. Instead of buying two cheap, inferior cards, they buy one that is really good and artistic. Thus, though they spend as much on cards as before, the actual revenue to the Post Office is less, for people get one halfpenny stamp for their one good card instead of two halfpenny stamps for their two cheaper cards."

TENDERS WANTED—For the supply to the Walsall tramways department of passenger fare tickets with advertising rights and ticket-registering punches (on hire); particulars from the General Manager's Office, Birchills Depôt, Walsall. The Kent Education Committee invite tenders for printing monthly schedule of payments; particulars from the Kent Education Committee, Sessions House, Maidstone. For the Sligo Corporation's printing and stationery; particulars from Mr. J. M'Goveran, town clerk, Sligo. For the printing and stationery for three years for the Darlington Corporation. Form of tender from the Borough Accountant, Darlington. For a supply of printing and stationery to St. Thomas's Hospital for three years; particulars from Mr. S. Phillips, St. Thomas's Hospital, Westminster Bridge. For aluminium sheets for photo-mechanical and lithographic work; and 1,725 reams of map-printing papers for the Egyptian Survey Department. Tender forms from the Director-General, Survey Department, Giza, Mudiria, Egypt.

WE understand that Mr. J. E. Wollacott, assistant-editor of the Calcutta *Statesman*, has been appointed editor of the *Bombay Gazette*.

BRITISH Guiana imported British stationery in 1912 to the extent of £6,932, as against £8,641 in 1911, and £8,167 in 1910, £7,486 in 1909, and £7,433 in 1908.

THE death has occurred, at Aberdeen, of Mr. William Livingstone, J.P., printer, who was for many years a prominent figure in local labour circles. He was twice president of the Aberdeen United Trades Council, and for many years was a prominent official of the Aberdeen branch of the Scottish Typographical Association.

AMERICAN papers announce the death of Mr. Robert Greig Renton, a sub-editor on the staff of the *Scottish American*. Mr. Renton was a native of Crossgates, near Dunfermline. He began to practise as a solicitor in Glasgow in 1865, and followed his calling there until 1878, when he left for America, where he joined the staff of the *New York Sun*, and subsequently became a sub-editor on the *Scottish American*.

"SAINT BRIDE FOUNDATION PRINTING SCHOOL BULLETIN" (Students' Notes and Queries) is the title of a little 8-page demy 8vo. monthly publication "for school circulation," the first number of which has just been issued. Composed and printed by the students, it is to contain the official notices giving particulars of visits, examinations, and other matters pertaining to the work of the School. The present issue was composed by students on the linotype, and printed by members of the letterpress machine class, and is all that a printing students' magazine should be. We wish it every success in its laudable object to "cultivate a greater social harmony."

DISSOLUTION OF JOINT STOCK COMPANIES.—A notice appears in the *London Gazette* for the 21st inst., to the effect that the following companies have, as on that date, been struck off the Register of Joint Stock Companies, and thereby dissolved:—

Egyptian Daily Post, Ltd.
"Mercury" Publishing Co., Ltd.
Rudd Press, Ltd.

A notice also appears in the same number of the *Gazette* to the effect that, at the expiration of three months from the date in question, the following companies will, unless cause is shown to the contrary, be struck off the Register of Joint Stock Companies, and thereby dissolved:—

Britannia Publishing Co., Ltd.
British Electro-Ads, Ltd.
City of London Publishing Co., Ltd. (Registered March 27th, 1907.)
"Ideal" Advertising and Publishing Co., Ltd.
North Bucks Press Co., Ltd. (Registered February 18th, 1910.)
Savile Publishing Co, Ltd.
Sharp Scrap Press, Ltd.

THE *Windsor Magazine* for November is a very attractive issue, containing new features of importance as well as the latest instalments of the serial programme which has proved such a genuine success in the last few numbers. There is a long complete story by Robert Barr, which is one of the most interesting pieces of work ever written by that master of the art of the short story. The strenuous romance of modern life in Canada is represented by a story from the pen of Dolf Wyllarde. Among other complete stories, serious and entertaining, are contributions by writers of such varied talents as Fred M. White, Dornford Yates, and W. Outram Tristram, the author of Sir Herbert Tree's greatly successful play, "The Red Lamp," as well as of several notable books. There is also a large instalment of Gertrude Page's fascinating novel of Rhodesian life, "The Pathway," which has already made a marked success. The fine art feature consists of a survey of the Art of Anna Lea Merritt, the Anglo-American painter whose picture, secured for the Nation by the Trustees of the Chantrey Collection, "Love Locked Out," is one of the most popular of modern works.

The Bookbinders' Strike.

The dispute at the works of Messrs. Burn and Co., Kirby-street, Hatton-garden, has now entered upon its twelfth week, and there is as yet no sign of any settlement, the warfare being carried on with unabated determination on both sides. Messrs. Burns' premises are still picketed and the workers on strike, both male and female, may be seen in small groups in the vicinity.

The Printing and Kindred Trades Federation have issued a circular to all affiliated unions, calling attention to the attitude to be

Digitized by Google

adopted towards work belonging to publishing firms dealing with Messrs. Burn, and in order that the position in this matter may be strengthened a deputation from the London strikers is to visit the Scottish centres, beginning with Edinburgh.

In connection with the dispute Messrs. Methuen and Co. announce that they have been obliged to postpone till next year Mr. Conrad's "Chance," Mr. H. C. Bailey's "The Sea Captain," and "The Way Home," by the anonymous author of "The Wild Olive" and "The Street called Straight."

A Scottish Dispute.

A crisis has been reached in the bookbinding trade in Scotland with regard to the question of female labour in the trade. The matter has been the subject of negotiation between the Scottish Alliance of Masters in the Printing and Allied Trades and the National Union of Bookbinders and Machine Rulers. The men demand a restriction in the employment of female labour and of unskilled male labour in the bookbinding shops in the principal towns in Scotland. The majority of the employers decline to accede to their request. Negotiations between the employers and the men's union have been carried on for about eighteen months, and at a meeting of the employers the other day it was again decided to refuse to grant the men's request. The Bookbinders' Union, on the other hand, have been considering the advisability of enjorcing their demands, and at a meeting of union representatives from the various districts held in Perth, it was resolved to declare a strike. The Glasgow branch of the Bookbinders' Union considered the matter the other evening, and confirmed the decision of the delegates of Perth, and resolved that all union members should tender their notices to cease work on Wednesday, October 29th, the stoppage to take effect a week or a fortnight later, according to the custom of the individual shops.

A meeting ot the Edinburgh branch of the National Union of Bookbinders and Machine Rulers was held on Monday night, when the dispute in regard to the question of female labour with the trade was discussed. About two weeks ago a circular was sent to the masters for signature to the effect that on and after November 1st, 1913, "no further female learners or workers who have not served or are not serving a seven years' apprenticeship in conformity with trade custom shall be introduced at any of the following classes of work:—Leather work, stationery forwarding, machinery, cloth work, paper-ruling. This agreement shall not interfere with any worker, male or female, employed previous to November 1st, 1913, and the endorsement of the same is conditioned upon the foregoing conditions being made operative in all union establishments throughout Scotland."

It was intimated at the meeting that only one of the 30 firms in Edinburgh had replied agreeing to the conditions. The meeting resolved that all union members should tender their notices to cease work. The men hold that the work in the departments referred to in the circular should be reserved for men, there being plenty of work for women in quarter binding, flush work, folding, sewing, etc.

ROBERT AND ANDREW FOULIS AND THE GLASGOW PRESS, WITH SOME ACCOUNT OF THE GLASGOW ACADEMY OF THE FINE ARTS, by David Murray, M.A., LL.D., President of the Glasgow Bibliographical Society. 4to X + 144 pp. Illustrated. Glasgow: J. Maclehose and Sons, 1913. 10s. 6d. net.

It is not generally recognised by bibliographers and historians of the Press (is not, indeed by Dr. Murray in this work), that Scotland led the way in the revival of Fine Printing. For two centuries after the coming of the Reformation, the Typographical Art was in a very decadent state, and no one attempted to rival or excel the splendid work of Jensen, Aldus, the Estiennes, and the numerous other famous printers of the first century after the invention of the art, type, presswork and general get-up being alike poor and unattractive. In England, it is true, Caslon, by the introduction of his new founts from 1720 onwards, had made good work at least possible, but this led to no general revival of fine printing, the few well produced books of the period being lost amidst the vast crowd of ordinary ones. In Scotland, early in the eighteenth century, printers were few, and their work of little or no typographical importance. Under such circumstances, it is not altogether surprising that the revival of some of the past glories of typography should be due to a Scottish barber of literary and artistic proclivities, Robert Foulis to wit (1707-1776) who, about 1741, commenced to issue, from the Press which he and his brother Andrew had set up within the precincts of Glasgow University, a series of finely printed books, the excellence of which has been appreciated to our day. This, be it remembered, was quite sixteen years before the Englishman Baskerville made a start in the same direction. "Foulis Press" books still figure in second-hand booksellers' catalogues as items of some little importance, and the Foulis Exhibition at Glasgow, a few months back, was the means of stimulating interest in these books and their printers. Dr. Murray opened that Exhibition, and the present work is really an amplification of his inaugural address on the occasion. Hitherto, the available information about the career and work of the Brothers Foulis was somewhat scanty, but Dr. Murray has now provided admirers of the productions of their Press with a more copious biography of these printers—and particularly of Robert Foulis—than has hitherto been extant. The golden age of the Foulis Press practically came to an end almost at the same time that Baskerville's Press commenced its activities, *i.e.*, soon after the middle of the eighteenth century, when Robert Foulis, confiding the direction of the Glasgow University printing establishment mainly to his brother Andrew, set to work to realise what had been a pet scheme of his for some time previously, *i.e.*, the founding of an Academy of Fine Arts at Glasgow. He did actually found one, with some local assistance, and what is more carried it on for twenty years, plunging the while deeper and deeper into a sea of debt. The fact was that Glasgow showed itself more or less indifferent to his Academy, and the amount of support forthcoming after the start was but small. Andrew's sudden death in 1775 compelled Robert to close the Academy and sell off the stock of pictures, etc., to try and recoup himself for the expenses of past years. But in this hope he was wofully disappointed, as his highly prized canvases, though alleged to be by famous old masters, fetched but a mere song in a London auction room, and the old printer set out, broken-hearted, to return to Glasgow, but died soon after he had crossed the Border. The story of his unlucky infatuation for the Art that was to ruin him, and consequent neglect of the business that has made his name famous—though it is to be feared was far from making his fortune—is a very interesting one and is told in much detail by Dr. Murray, as is also the chequered career of his degenerate son and successor, Andrew Foulis II., whose "Rake's Progress" finally landed him in that Edinburgh Poorhouse in which he died. The Foulis Press was essentially a Scottish enterprise, as its books were printed with Scotch type (from the Wilson foundry at Camlachie) on Scotch-made paper, under the auspices of a Scottish University, and it is thus fitting that the first public act of the newly formed Glasgow Bibliographical Society should be to perpetuate its memory. Dr. Murray's book, together with the admirable catalogue of the Foulis Exhibition issued by Messrs. Maclehose in the same *format*, will serve to preserve to future generations, in a worthy manner, the story of the achievements of perhaps the most talented and public-spirited printer Scotland has ever had.

LOCKWOOD'S DIRECTORY OF THE PAPER, STATIONERY AND ALLIED TRADES. 8vo., 658 pp., cloth. Lockwood Trade Journal Co. (1913). London: Stonhill and Gillis, 58, Shoe-lane, E.C. 12s. 6d. net.

The present, or 1914, edition of this indispensable Directory of the Paper, Stationery, and Printing Trades of the U.S.A., Canada, Mexico, Cuba, etc., is the thirty-ninth, and like the previous ones, has been thoroughly revised to date of issue. All the old departments of this valuable annual publication have been retained, and a number of them enlarged. The principal change to be noted in this edition is in the division of "Watermarks and Brands," which has been carefully revised, and the matter reset in two columns, instead of one as heretofore. This section now includes practically all the titles in active use in the American Paper Trade. The department of "Paper Specialties," started in the 1913 edition, has now increased by 50 per cent., and takes place as one of the most useful departments of the Directory. We also notice that the method of indicating the character of the business done by paper and rag and paper stock dealers, paper box makers and stationers, is used in this edition to a much larger extent than in previous ones. It will be of interest to mention that the number of firms engaged in the papermaking business in the U.S.A. has decreased (no doubt owing to amalgamations, etc.) from 700 to 668 during the past twelve months, though the number of mills making paper is only nine less than before, viz., 754. However, as eight new pulp mills have been started up since the last issue of the Directory, the gross total is practically unchanged. The number of mechanical pulp mills has decreased by nineteen, viz., to 164, and sulphite mills by seven, being now down to 80, whilst, on the other hand, the soda pulp mills have increased by 50 per cent. to 27, and the sulphate mills from 7 to 18. The number of Canadian paper mills is now 62, against 54 last year, and of pulp mills 64, against 72, of which 51, as compared with 47, are mechanical. Two each of new sulphite and sulphate mills have been put up, but the number of soda pulp mills has dropped from five to three. Of the changes that have taken place in the numerous other allied industries that find place in the Directory we have no space to refer to here, but purchasers of the volume will find it a perfect mine of information on this and many other points. A series of carefully compiled indices facilitates its use. It will be noticed that the British agents for Lockwood's Directory are the publishers of the *British and Colonial Printer and Stationer*.

SPECIAL PREPAID ADVERTISEMENTS.

SITUATIONS.—Charges for Advertisements under the headings "Situations Vacant," or "Situations Wanted," are at the rate of

ONE SHILLING FOR 24 WORDS

(3 Insertions: TWO SHILLINGS),

and Fourpence for each additional Eight Words. Minimum Charge, One Shilling.

STONHILL & GILLIS, 58, Shoe Lane, London, E.C.

Businesses for Sale.

LITHO BUSINESS for Sale; Plant includes Offset Machines, and the whole of Plant is practically new; price £2,250; or would let Plant on hire to responsible party; an absolute bargain.—Address, No. 13266, Office of the BRITISH AND COLONIAL PRINTER AND STATIONER, 58, Shoe-lane, London, E.C. 13266

Machinery and Plant for Sale.

ALL ELECTROTYPERS and STEREOTYPERS should write H. Williams and Co. for their latest catalogue of machinery, and Electroline Enamel Paste, for producing fine art stereos.—Engineers, Red Lion Works, Warner-street, Rosebery-avenue, E.C. 12343

Machinery Wanted.

COPPERPLATE PRESS wanted, second-hand; Roller 12-in. (or over).—Condition and full particulars to 30, Glebe-place, Chelsea, S.W. 13271

Miscellaneous.

EXCELLENT MANUFACTURING PREMISES to Let on Lease, with large piece of vacant land; Rental £100, or would sell Freehold for £2,500.—Address, No. 13267, Office of the BRITISH AND COLONIAL PRINTER AND STATIONER, 58, Shoe-lane, London, E.C. 13267

FOREIGN STAMPS.—Collection of 2,650 varieties for Sale, including many rare and unused; mostly in fine condition; neatly mounted in a Whitfield King "Standard" Album.—Can be seen by appointment, if desired, at the office of this journal, or particulars furnished on application to No. 13261, Office of the BRITISH AND COLONIAL PRINTER AND STATIONER, 58, Shoe-lane, London, E.C. 13261

PARTNERSHIP.—Young man, with small but growing established Business, Relief Stamping, etc., seeks Partner; a Die Sinker or one interested in Stationery for preference; capital not essential; must be a live man.—Write, Nemo, No. 13270, Office of the BRITISH AND COLONIAL PRINTER AND STATIONER, 58, Shoe-lane, London, E.C. 13270

TO PRINTERS.—For Sale, cheap, several large Body Founts of new Type, 8-point to 12-point in both O.S. and Modern Faces; portion very slightly used and remainder in founders' packets; specimens and weights on application.—Spottiswoode and Co., Ltd., 5, New-street-square, London, E.C. 13265

TO PRINTERS, PUBLISHERS and ALLIED TRADES.—TO BE LET, as a whole or in Sections, an important Block of Buildings covering an Island Site conveniently situated close to Fleet Street. They contain four well-lighted upper rooms with lofty basement. Total floor space, 12,625 sq. ft.—Rent and further particulars of Messrs. Farebrother, Ellis and Co., 29, Fleet-street, E.C. 13264

Reuters' Agency and the Press.

THERE has been a considerable flutter in advertising circles over the hot-house methods of forcing business employed by a certain news agency, which endeavoured to snatch the bread out of the mouths of the legitimate firms by promising prospective customers "extended editorial reference"—suggesting, in effect, that advertisers would obtain better value for their money by dealing with an agency which placed news as well as advertisements. It need hardly be said that it is not in the power of any news agency to fulfil promises of this kind so far as British newspapers as a whole are concerned, but the principle involved is destructive to the prestige and impartiality of the Press, and advertisers might be led to expect paragraphs and puffs under the cover of news service, to which they have no right. Legitimate advertising agencies would be placed in a position of unfair competition by this new venture, which, fortunately, has met with such a storm of disapproval that the offensive circular has been withdrawn. Reuters' Agency holds an honourable position with the Press and the public, and it is gratifying to know that it has taken the right course in withdrawing from the situation in which the issue of such a circular placed it.

Printers Facing the Facts.

IN the report of the organising secretary to the Costing Committee, after visiting Manchester, Liverpool, Newcastle-on-Tyne, Darlington, Stoke, and Brighton, during the past month, is the striking statement that 75 per cent. of the principals interviewed assured him that action had either been taken, or was contemplated in the near future to carry out the recommendations of the Committee. Whilst this applies more particularly to the larger offices in these centres, it is encouraging to note that in quite a number of comparatively small plants the model cost system is being worked satisfactorily. Judging from this close survey of the conditions of the costing movement in these districts a large number are now waiting until the end of the year and the closing of their books to make a start with the installation of the system. To such a helpful suggestion may be offered. Though it is, of course, very desirable to work out the schedule of expenses from the latest profit and loss account, in many offices it is the difficulty of knowing the average weekly number of chargeable hours in each department which delays the installation of the system. Many are facing the facts, and are getting shocks when they see how different the hour rates work out to what they had thought they were. The next two months will undoubtedly be an important period in the costing campaign, but by the end of February, when the next big Costs Congress is to be held in London, there will be a host of printers ready to testify to the value of the system they have installed.

* * *

Trouble at a Technical School.

THERE has been trouble at the Bradford School of Arts in connection with the printing classes of that institution. It appears that it was an understood rule that no pupil was to receive instruction unless he were a *bonâ fide* apprentice or worker at the trades represented by the classes, this being defined under the following regulation: "These classes being entirely technical ones, only such students will be admitted as are engaged during the day-time as apprentices or journeymen." A breach of the rule has taken place by the admission of some boys to the classes who are stated to have no real connection with the printing trade. The teachers in the printing section are members respectively of the Amalgamated Society of Lithographic Printers and the Typographical Association, and as the rules of these bodies provide that no member shall instruct in the principles and practice of the trade any youth who is not a *bonâ fide* apprentice or a journeyman, therefore the teachers have been called upon to withdraw if the Education Committee insist upon their teaching pupils who are not really connected with the trade, and the teachers, it is stated, intend to obey the ruling. Writing to the Press in connection with the matter, the President and Secretary of the Society of Lithographic Printers say that the policy of the Technical Education Committee means "that the policy of cultivating the existing craftsmen to the highest pitch of efficiency is disregarded in favour of a policy of flooding the trade with numbers of half-trained improvers, for whom employment cannot be found, thus inevitably leading to the utter degradation of the whole tone of the trade." It is also announced that arrangements are in progress to continue the theory lessons to the legitimate students for the rest of the session at this society's expense, but no resumption of classes at the school can be permitted until the objectionable new regulation has been rescinded. The Bradford bakers' organisation have also made a strong protest against two or three persons who, it is said, are not dependent on the baking trade for a living being introduced into classes which were understood in the beginning to have been arranged for the benefit of those in that trade only. It is generally the rule at most of the technical schools in the country that only those employed in a trade may attend their classes, and the sooner Bradford falls into line the better for its pupils. Technical classes, while doing excellent

Digitized by Google

work, can never supplant workshop experience, and the endeavour to let in lads to trades they have not been legitimately attached to can only lead to the production of workmen that would be neither a credit to themselves or the craft to which they have been admitted by back-door methods.

Factory Notices.

An interesting case recently came under our notice in the Divisional Court of the King's Bench Division, in which legal arguments turned on the point whether or not a notice under the Factory and Workshop Act could be removed from the place where it hangs in a building for the purpose of adducing evidence in a Court of Summary Jurisdiction. In every factory and workshop there is an abstract document specifying the period of employment and other information, and in the case under notice the employers were not requested to produce it in the lower court, but the Inspector of Factories proceeded to give secondary evidence as to the contents of the notice, which he was entitled to give according to law. The lower court held the notice could have been produced, but Mr. Justice Scrutton asked: What position would the employers be in if the notice was produced and an Inspector visited the premises and found no notice affixed? The employers were liable to a penalty if they removed it, and their Counsel replied that a second notice could have been secured to take the place of the one temporarily removed. The Divisional Court of the King's Bench, however, have disagreed with him. To remove the notice is a breach of the statute; but a man can take notes from it and give evidence according to his own knowledge as to what it contains. The point is an important one for printers and others engaged in manufacturing businesses, as it shows how easy it is for any employer to make an error when engaged in defending himself against an allegation under the Factory and Workshop Act of 1901.

At the Guildhall, last week, Mr. Ernest Arthur Mutch, trading as H. G. Rowe and Co., map publishers, of Devonshire-square, E.C., was summoned under the Copyright Act, 1911, for selling infringed copies of the four mile ordnance survey map, the copyright of which was vested in the Comptroller of H.M. Stationery Department. Mr. Giveen, for the defence, submitted that for years the ordnance survey maps had been the substratum of nearly all other maps printed. The Crown copyright has always been a disputed one. Mr. Mutch had acted in a mistaken view of the law. Alderman Moore said that, having regard to the circumstances, he should only impose a fine in respect of one copy—40s.—and costs £15 15s. All the copies and plates to be delivered up to H.M. Comptroller.

THE LINOTYPE FOR BOOK WORK.

Faces of Type, etc.	Linotype Users have the choice of over 400 faces of type; new faces are being added continually. Many of these faces have been specially cut for Book Houses. (Every Linotype User has also the choice of 84 complete borders, 73 varieties of rules, dashes, etc., and over 600 figure faces.)
Alignment.	Face alignment on the Linotype is quite automatic; no adjustment whatever is necessary. Type matter set twenty years ago would align with that set to-day on any Linotype machine.
Justification.	Line justification on the Linotype is perfect; this applies to corrected lines as well as the initial product.
Quality of Product.	The Linotype line is cast in one complete piece. This permits of slow and deliberate movement in alignment and casting, which obviously is the best way of obtaining a perfect printing surface. Incidentally it may be mentioned here that, owing to the comparatively slow movements made by the machine, the cost of upkeep is only a few pence per week.
Ease of Make-up.	The superiority of the Linotype unit of composed matter is apparent immediately the operator empties his machine galley; whether the slugs are put on a random or on a galley there is no danger of pie. Linotype matter is so easily handled that a saving of fifty per cent. is effected in makeup alone.
Electrotypes and Stereotypes.	The Linotype shoulder height and depth of strike are ideal for wax, lead, or flong moulding, with the result that the finest possible plates are made from Linotype-set matter.

A Booklet containing specimens of Linotype Faces specially suitable for Book work will be sent to anybody interested in the production of high-class printing.

Financial.

Offices of the *British and Colonial Printer and Stationer*,
58, SHOE LANE, LONDON, E.C.
WEDNESDAY, Oct. 29th, 1913.

A STRONG demand has arisen in the money market for credit, and supplies this week not having been sufficient to go round borrowers had to go to the Bank of England on Monday and again yesterday for moderate sums for a week at 5½ per cent. This is due to the Treasury Bill payments and the calling in of funds by the India Council. Rates have substantially risen. Discounts are steady, the shorter dated bills having strengthened under the influence of the strong competition for the bullion in the open market. The net influx of gold to the Bank to date amounts to £361,000. Yesterday £950,000 came up for settlement in the open market, a large portion of which was purchased on behalf of New York, a smaller amount going to Paris, and this has brought about the possibility of a rise in the Bank Rate. Stock markets have not made much further progress this week, but an improved tone was noticeable with the commencement of the new account. Consols are stronger, quotations having advanced to 72⅛ to 72⅛ for money, and 72⅛ to 73 for the account.

The miscellaneous industrial market has been quiet and irregular, and there has been no increase in the volume of business with the opening of the new account. In our list of paper and print shares there have been three rises and no falls. Amalgamated Press yesterday rose ¼, making with last Friday's rise a gain of ⅛ for the week; George Newnes Pref. gained ⅜ on Saturday, and Waterlow and Sons Def. rose ¼ yesterday. Business has been done during the past seven days in Amalgamated Press Pref. at 21s. 6d.; in Associated Newspapers Pref. at 20s. 7½d., 20s. 7½d., 20s. 3d., 20s. 9d., 20s. 9d. and 20s. 3d.; in Cassell and Co. at 96s. 3d.; in Sir Joseph Causton and Sons Pref. at 5xd.; in Carl Hentschel Pref. at 5s.; in Ilford Pref. at 19s. 4½d., and in the Ord. at 14s. 6d.; in *Illustrated London News* and *Sketch* Ord. at 3s. 3d., and in the Pref. at 13s. 3d.; in International Linotype at 73½xd., 73, 70⅝ and 70xd.; in Linotype and Machinery A Deb. at 55½ and 53; in Edward Lloyd Pref. at acc. 21s. 9d.; in George Newnes Pref. at 16s. 6d.; in C. Arthur Pearson Pref. at 76s.; in *Standard* Newspapers Deb. at acc. 68½; in Raphael Tuck and Sons Pref. at 98s. 9d.; in Waterlow and Sons Pref. Ord. at 11⅝, and in the Def. Ord. at acc. 28; and in Weldons Ord. at 31s. 3d., 30s. 3d. and acc. 31s. 3d.

DIVIDENDS AND REPORTS.

WALL-PAPER MANUFACTURERS. — The directors announce that the profit for the year ended August 31st last is £189,674. After payment of debenture interest, preference dividend, and an interim dividend of 2 per cent. on the ordinary shares, they recommend a final dividend of 3 per cent. on the ordinary shares (making 5 per cent. for the year), placing £50,000 to reserve fund (increasing it to £500,000), and carrying forward £80,725.

In their forthcoming report the directors of the Amalgamated Press, Ltd., will propose a bonus of three new ordinary shares, free of cost, in respect of every ten shares at present held. The present profits, it is stated, are sufficient to pay the usual 40 per cent. dividend on the whole capital thus augmented.

NEW COMPANIES.

ANGOLD'S, LTD.—Registered on October 17th, with a capital of £500, in £1 shares, to carry on the business of printers, engravers, publishers, book and print-sellers, bookbinders, art journalists, etc. The subscribers are S. R. G. Wood and H. L. Angold. Private company. The number of directors is not to be less than two nor more than five. The first are S. R. G. Wood and H. L. Angold. Registered office, 10, Bolt-court, Fleet-street, E.C.

STELLAR SIGNS, LTD.—Registered on October 21st, with a capital of £1,000, in £1 shares, to carry on the business of advertising contractors, makers of and dealers in signs, facias, name plates and indicators, electricians, metal, glass and wood workers, etc. The subscribers are V. G. Morris and F. W. Bundy. Private company. The number of directors is not to be less than two nor more than five. The first are V. G. Morris (chairman), and F. W. Bundy.

PRISMATIC ART CO., LTD.—Registered on October 21st, with a capital of £2,500, in £1 shares, to carry on the business of manufacturers and sellers of advertising signs and designs, to acquire certain patents and inventions, etc., relating thereto, and to adopt an agreement with A. V. L. Dennys. The subscribers are J. B. Williams and A. V. L. Dennys. Private company. The number of directors is not to be less than two nor more than five. The first are P. F. Chaplin, J. B. Williams, and A. V. L. Dennys. Qualification, £100. Remuneration as fixed by the company.

TINSLEY AND WILLIAMS, LTD.—Registered on October 20th, with a capital of £10,000, in £1 shares, to carry on the business of printers, advertisers, agents, contractors, advertisement novelty designers and manufacturers, etc. The subscribers are S. Tinsley, H. J. Williams, Mrs. M. Tinsley, and Mrs. J. K. Williams. Private company. The number of directors is not to be less than two nor more than five. The first are S. Tinsley and H. J. Williams. Registered office, 29 and 31, Clifton-street, Finsbury.

"WIRRAL REVIEW," LTD.—Registered on October 22nd, with a capital of £1,000, in £1 shares, to print, publish and circulate any newspaper or newspapers, and carry on the business of newspaper proprietors and general publishers, etc., and to adopt an agreement with F. E. Giles and W. Jones. The subscribers are W. Jones, J. McWilliam and S. Pope. Private company. The number of directors is not to be less than two nor more than ten. The first are F. E. Giles, J. McWilliams and J. Lytle. Qualification, £10. Remuneration as fixed by the company.

MARTIN ENGRAVING CO., LTD.—Registered on October 23rd, with a capital of £1,000, in £1 shares, to take over the business of a process engraver and designer, carried on at 1 and 2, Bolt-court, Fleet-street, E.C., by T. Martin. The subscribers are T. Martin and L. Posener. Private company. The number of directors is not to be less than three nor more than five. The first are T. Martin, L. Posener and H. Harris (all permanent). Qualification, 50 ordinary shares.

HEALTH CULTURE CO. (1913), LTD.—Registered on October 22nd, with a capital of £2,500, in £1 shares, to take over a business of promoting health culture by the formation of associations, and by journalism, etc., carried on at 100, Walworth-road, S.E. The subscribers are A. J. Bennett, and C. W. de Vear. Private company. The number of directors is not to be less than two nor more than five; the first are A. J. Bennett, and A. B. Brown. Qualification, £25. Remuneration as fixed by the company. Registered office, 100, Walworth-road, S.E.

PUBLISHING OWNERS, LTD. — Registered on October 23rd, with a capital of £1,000, in £1 shares, to take over the copyright, manuscript, publishing and other rights of, and in a certain publication known as the *Kitchen Magazine*, to carry on the business of journalists, newspaper proprietors, printers, publishers, typefounders, booksellers, etc., and to adopt an agreement with C. Argles. The subscribers are H. E. Vardon and Mrs. M. Davies. Private company. The number of directors is not to be less than three; the first are W. Atkins, J.P., Major P. T. Westmoreland, Miss Margaret M. MacQueen and C. Argles (managing director). Qualification 25 shares. Registered office, 22, Henrietta-street, Covent-garden, W.C.

W. CUTHBERTSON AND CO., LTD. — Registered in Edinburgh on October 18th, with a capital of £5,000, in £1 shares, to acquire and carry on the business of W. Cuthbertson and Co., stationers and printers, Edinburgh. The subscribers are J. M. Leslie, W. Lord, and F. Parkin. Private company. The number of directors is not to be less than two nor more than five; the first are J. M. Leslie, W. Lord, and F. Parkin. Registered office, 17, Union-street, Edinburgh.

PATERSON AND CLUBB, LTD.—Registered in Edinburgh on October 17th, with a capital of £2,500, in £1 shares, to acquire and carry on the business of printers, lithographers, stereotypers, of Paterson, Clubb and Andrew Simpson. The subscribers are W. B. Paterson and A. Clubb. Private company. The number of directors is not to be less than two nor more than four. The first are W. B. Paterson, A. Clubb and A. M. Paterson. Qualification, 100 shares. Registered office, 68, Parnie-street, Glasgow.

RUSSIAN ADVERTISING AGENCY, LTD.—Registered on October 14th, with a capital of £1,000, in £1 shares, to take over the business carried on by Z. N. Preev, as the "Russian British Press Agency," to carry on the business of advertising contractors, commission agents, printers, newspaper proprietors, publishers, etc. The subscribers are Z. N. Preev and A. Longbottom. Private company. Table "A" mainly applies. Registered office, 359, Strand, W.C.

Holder, G. Y. Aylen, 454, Commercial-road, Portsmouth.

Kent and Matthews, Ltd.—A memorandum of satisfaction in full, on September 29th, 1913, of debts dated October 15th, 1903, and January 11th, 1904, securing £1,000, has been filed.

Solicitors' Law Stationery Society, Ltd., —A memorandum of satisfaction in full on July 31st, 1913, of mortgage and charge dated November 9th and 23rd, 1908, securing all moneys owing to or become owing on any account, has been filed.

Macrau, Ltd. — Debenture dated September 24th, 1913, to secure £125, charged on the company's undertaking and property, present and future, including uncalled capital. Holder—T. W. Cole, 15, Matlock-lane, Ealing.

Sears Printing and Publishing Co., Ltd.—A memorandum of satisfaction in full on October 10th, of mortgage dated March 12th, 1913, securing £100 and further advances.

St. Paul's Printing Co., Ltd.—Issue on October 10th, 1913, of £100 debentures, part of a series of which particulars have already been filed.

Multiplex Advertising Machine Co., Ltd. —Issue on October 15th, 1913, of £1,150 debentures, part of a series of which particulars have already been filed.

Kent and Matthews, Ltd.—Particulars of £1,000 debentures, created September 30th, 1913, filed pursuant to Section 93 (3) of the Companies (Consolidation) Act, 1908, the whole amount being now issued. Property charged—the company's undertaking and property, present and future, including uncalled capital. No trustees.

London Waste Paper Co., Ltd.—A memorandum of satisfaction in full on October 9th, 1913, of debentures, dated April 11th, 1911, securing £500, has been filed.

COMMERCIAL INTELLIGENCE.

Re J. COX and CO., Printers.

At the adjourned meeting of the creditors of John Cox, lately trading as above, at 33, Union-street, Borough, S.E., and residing at 29, Dukesthorpe-road, Sydenham, a resolution was passed for Mr. W. A. S. Oxborrow, I.A., 19 and 20, Temple-chambers, E.C., to act as trustee and administer the estate in bankruptcy with the assistance of the following committee of inspection, viz.:—Mr. Burnham, Mr. Harcourt, and Mr. R. E. Loveless, general proxy for Tee and Whiten, and J. Mead, Ltd. Mr. Daniel Williams, official receiver, reported that the debtor was still an absentee under the proceedings, and there was no further information to hand regarding the estate. The bond to be given by the trustee was recommended to be for £100. Further particulars of this case appeared in our issue of October 16th.

Re ROSENE ADAMS, Stationer, etc.

This debtor, a stationer, etc., of 53, Erleigh-road, Reading, was examined at the Reading Bankruptcy Court on Thursday. She began business in April, 1910, with £75 of her own and £125 borrowed from Mr. A. T. Higgs, actuary of the Reading Savings Bank, whom she still owes £75. She bought the business for £200. Her liabilities are £152 18s. and net assets £80 9s. 0½d., leaving a deficiency of £72 8s. 11½d. The examination was adjourned till November 27th.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records. Ed.]

ENGLAND AND WALES.

PARTNERSHIPS DISSOLVED.

LLOYD and TAYLOR, 77a, Market-street, Manchester, general lithographic printers. Debts by J. M. Taylor, who will continue to carry on the business at the same address under the style of J. M. Taylor. R. G. Lloyd will in future carry on business in partnership with A. A. Lloyd at 10, Wyre-street, Fairfield-street, Manchester, under the style of R. G. Lloyd and Son. October 10th.

PITFIELD, T. J., LOVELL, C. F., THOMPSON, J. O., and CREASEY, W. H., trading as Meggy, Thompson and Creasey, at Chelmsford, newspaper proprietors, publishers and general printers. Debts by J. Thompson and W. H. Creasey. June 30th.

MARTIN and CHEW, 1-2, Bolt-court, Fleet-street, London, E.C., process engravers. Debts by T. Martin, October 16th.

DISTRIBUTION OF ASSETS.

COPLEY, C., late of 143, Buckingham-terrace, Whitham-road, Broomhill, Sheffield, formerly letterpress printer. Claims by December 8th to Benson, Burdekin and Co., 41, Norfolk-street, Sheffield, solicitors for the executors.

SCHOFIELD, T., late of 17, Finsbury-pavement London, E.C., lithographers' artist. Claims by December 15th to Ascroft, Maw and Shimeld, 22, Clegg-street, Oldham, solicitors for the executors.

THE BANKRUPTCY ACTS, 1883 and 1890. RECEIVING ORDER.

WALKER, C., 46, Elizabeth-street, Blackpool printer and stationer. Date of order and adjudication order, October 20th, made on the debtor's own petition. First meeting of creditors, November 5th, 3 p.m., at the official receiver's office, 13, Winckley-street, Preston. Public examination of debtor, November 11th, noon, at the Court House, South King-street, Blackpool.

FIRST MEETING AND PUBLIC EXAMINATION.

VICK, H., ASHWORTH, A. and F., PEARCE, W., and INGHAM, L., trading as Vick, Ashworth and Co., Dean-road, Salford and 28, Kennedy-street, Manchester, general printers. First meeting, November 5th, 3 a.m., at the official receiver's office, Byrom-street, Manchester. Examination, November 18th, 10.30 a.m., at the Court House, Encombe-place, Salford.

ADJUDICATION.

COX; J., lately trading as J. Cox and Co., at 33, Union-street, Borough, London, S.E., printer. Date of order, October 20th. Trustee, W. A. S. Oxborrow, 19-20, Temple-chambers, E.C. Appointed October 22nd.

NOTICES OF INTENDED DIVIDENDS.

NELSON, J. H. H., trading as Nelson and Son, 51, Broad-street, lately 4, Brunswick-square, Bristol, bookseller. Claims by November 11th to C. H. King, official receiver, 26, Baldwin-street, Bristol.

AVERY, R. H., Market-place, Fordingbridge, Hants, stationer, etc. Claims by November 11th to T. Barton, official receiver, City Chambers, Catherine-street, Salisbury.

THE COMPANIES ACTS, 1890 and 1908.

NOTICE OF RELEASE OF LIQUIDATOR.

THE LABOUR PIONEER PRINTING and PUBLISHING CO., Ltd., Williams-square, Glebeland-street, Merthyr Tydfil. Liquidator, E. Owen, official receiver and liquidator, St Catherine's Chambers, St, Catherine-street, Pontypridd. Released, October 16th.

Boston and South Lincolnshire PRINTERS Form Master Printers' Association.

Boston is a very interesting place for anyone connected with the printing craft to visit. You find in a prominent position a statue to the memory of Herbert Ingram, the founder of the *Illustrated London News*, and you are also shown the house in which Foxe wrote "The Book of Martyrs," and to come to more modern days, the new municipal buildings and the restored Guild Hall, in which some of the Pilgrim Fathers were for a time imprisoned, bear witness to the civic enthusiasm of the late Mr. J. Cooke, a worthy member of the craft and the journalistic profession.

Here then on historic ground it is good to record the holding of a meeting to consider the recommendations of the Costing Committee of the Federation of Master Printers, and to discuss what practical steps could be taken to improve the conditions of the printing trade in the district.

Fourteen printers assembled, and voted Mr. Robinson, of the *Lincolnshire Standard*, to the chair.

Mr. Robinson, in explaining the object of the meeting, said he believed it was the first occasion on which the printers of that town and district had ever met together in conference, He hoped it was the forerunner of many meetings, and that it would usher in a brighter era for the trade. The costing movement had been organised for the express purpose of impressing on printers not only the fact, which many knew too well, that they were not getting the best results out of their life work, but to show them how they could improve matters. Several present had attended the Peterboro' Cost Conference, but they might not have grasped all that had been set before them, though he thought the fog lifted considerably when they got down to the figures of their own business. Right at the back of it all was the idea that every printer must find out the actual cost of the work he was doing, and then they would soon see an improvement.

Mr. Joseph Cooke (president of the Peterboro' and District Master Printers' Association) spoke as to the practical benefits which Peterboro' printers had experienced since they had formed their organisation. The printers with comparatively small plants had unquestionably reaped most advantages from the movement, and they were rapidly securing greater uniformity in prices. He alluded to the general widespread interest taken in costs, and to the recent formation of numerous Master Printers' Associations. The question they should put to themselves could have but one answer. You cannot *know* your costs until you find these out yourself. He instanced several examples showing how more pleasantly and profitably business was being conducted in their district, whilst at the same time no prices were being charged which could not be fully justified.

Mr. A. E. Goodwin, secretary and organiser of the Federation Costing Committee, before explaining the Cost System in detail, referred to his encouraging experiences in Lancashire, and to the fact that in 75 per cent. of the offices he had called at they were doing something to carry out the recommendations of the Costing Committee. To demonstrate that the System could be worked in a small office, he showed a set of figures taken from an actual business where the sales were under £3,000, and a plant of £1,200 in use. He showed how simply it could be worked, and the little time involved in making out the various statements. How many years ago, he asked, were some of the prices fixed which you are charging to-day? Can you mention any other commodity which is sold to-day as cheaply as it was five years ago? Is it not absurd for printers to go on charging the same price, or a little lower, year after year, without attempting to find out the actual costs? To eliminate ignorance was the main object of the costing campaign, and it was gratifying to find it slowly accomplishing this purpose. He urged them to consider also the advantage of co-operating together, and to profit by the experience of their fellow printers in a neighbouring city.

A number of questions were asked and answered regarding the System.

Mr. J. Wood (secretary of Peterborough Master Printers' Association), said that he valued the title of "The Small Printers' Friend" which had been given him more than a knighthood, and proceeded to give case after case to show how costing and co-operation had materially improved the conditions of the smaller printers in this district. It was subsequently unanimously decided to form a Master Printers' Association for Boston and district, which would include Spalding, Skegness, and other outlying places.

Mr. H. Dodds was elected president, Mr. T. Wing vice-president, Mr. Robinson treasurer, Mr. T. Rogers secretary, and it was resolved to affiliate with the Master Printers' Federation.

Hearty thanks were accorded to Messrs. Cooke, Wood and Goodwin for their addresses, and a similar compliment was paid to Mr. Robinson for presiding.

A paper bearing the title of *New York Topics* is announced in New York. Theodore Lowe is the chief editor and publisher, and the art department is in charge of W. Lawson Guppy, an English artist.

A young lady visitor inquired of a little fellow: "Are you going to be a printer like your papa when you grow up?" "No!" said the little chap in a slow, serious tone, "I'm going to be a man!"

Reuter's Agency and the Press.

A circular issued by Reuter's Agency, seeking advertising business in return for "extended editorial reference" has caused quite a flutter in Press circles. It practically invited City companies and business houses to place their prospectus and general advertising with Reuter's, and in return to reap the advantage of free "puffs" in the Press, through the medium of Reuter's telegraphic news supply, and was strongly resented not only by newspaper proprietors but by the legitimate advertising agents.

A meeting of the Newspaper Proprietors Association was held on Monday to deal with the matter, when practically the whole of the daily and weekly newspapers were represented, and the following resolutions were unanimously carried :—

"That this council records its emphatic protest against the two circulars issued by Reuter's Financial Publicity Department (a branch of Reuter's Telegram Co., Ltd.), and published in the *Times* on the 25th and 27th inst., which imply that Reuter's Financial Publicity Department possesses special facilities for securing the insertion in newspapers of editorial paragraphs concerning companies applying to the public for capital, and resolves that a letter be written to Baron de Reuter, chairman of Reuter's Telegram Co., Ltd., calling for the immediate and unqualified withdrawal of these statements."

"That pending such withdrawal this council recommends its members to refuse to accept any advertisement from Reuter's Publicity Department."

Later in the evening is was announced "that, in view of the misrepresentation placed on the circulars issued by its Publicity Department on September 16th and October 8th, it has decided—in deference to the wishes of its friends in the Press—to withdraw the circulars in question."

A Claim for Photographs.

In the City of London Court, on Thursday, before Mr. Registrar Wild, the case of "Scriven and Co. *v.* Wakefield and Co." was again before the Court. The case came on by way of an adjournment, a report of the previous hearing appeared in the columns of this paper. The plaintiffs of 35-6, Hosier-lane, sued Messrs. J. Wakefield and Co., trading as the Applied Art and Antique Co., 9, Howland-street, Tottenham-court-road, for the sum of 17s. 6d. for photographs supplied to the defendants. The plaintiff said that the case had been adjourned in order that the defendants might give an order for electros and pay £1 10s. and 13s. costs. If no order was given, judgment was to be entered for the amount of the claim and costs. They had heard nothing from the defendants until the day before when they received a letter to the following effect :—"Referring to the adjournment in this matter which took place on October 9th we are quite ready to carry out the contract and take the blocks you agreed to supply us with without prejudice to our right to return them if not satisfactory. We say without prejudice because we have several times informed you that satisfactory blocks could not be made from the photos submitted to us, and we have offered to afford you facilities for taking the photos, and as we did not and could not approve of the photos submitted the making of blocks therefrom must be entirely at your risk."

In answer to the Registrar the plaintiff said the claim was for making photos of objects in the defendant company's premises. They had supplied the photos, and subsequently they had to supply electros, but the defendants would not give them the order for the electros. The defendant, Mr. Wakefield, said he was willing to give the order for the electros, but the photos were so bad that they could not give any order. The plaintiff said that the photos now in Court had been considerably knocked about since they were delivered. The defendant said that the photos were cloudy and the plaintiff's operator had told them he would take the photos on another occasion, but the operator never came. The plaintiffs had not fulfilled their contract, and they thought that the whole matter was done with. Only two photos were supplied, and the plaintiffs were to make three blocks. There was to be a photo taken of the outside of the premises, and that had not been done.

The plaintiff said there were three photos supplied on two cards, one of the cards had two photos pasted together. This was the first he had heard of a photo of the outside of the building to be taken.

The defendant said that the arrangement was for two photos of the inside of the building and one of the outside for the sum of 30s. They had never refused to take the electros which they were waiting to use in a catalogue that was coming out. They could not take electros from the photos submitted because they were not good enough. He (defendant) had not appeared on the last occasion because he thought the case was so simple. They were prepared to go on with the matter if the plaintiffs were prepared to fulfil their contract.

The Registrar said he assumed on the former occasion that the plaintiffs had fulfilled their part of the contract by taking proper photographs. He thought the better way of dealing with the matter was to adjourn the case for the plaintiffs to take proper photographs.

The plaintiff said the photos supplied had had artist's work upon them and had been touched up.

The Registrar did not think much of them as they were.

The defendant said the whole of their place was at the disposal of the plaintiffs in taking the photographs.

The Registrar did not think those supplied were satisfactory. He would adjourn the case to enable the plaintiffs to take better photographs and supply electros. The case would be adjourned for a month for that to be done.

The parties expressed satisfaction at the decision of the Registrar, who in adjourning the case until November 25th said he hoped he would see neither of the parties again.

Printers' Managers and Overseers ASSOCIATION.

NORTH MIDLANDS CENTRE.

At the monthly general meeting of this Centre, held last Saturday, at the Albert Hotel, Nottingham, there was a record attendance, comprising nearly 80 members and friends from Derby, Lincoln, Mansfield, Alfreton and the district. A most instructive lecture was delivered on "The Half-Tone Process," by Mr. P. E. Sutton.

Mr. BUDDEN, President, was in the chair, and in introducing the lecturer said they were fortunate in securing the services of Mr. Sutton for this subject, knowing he was a practical and experienced expert, and having, in conjunction with his brother, the responsibility and working of the plant for producing and making the blocks for illustrating the *Nottingham Guardian* and other publications issued by that office, besides being a frequent contributor to many trade journals. He had also made a special study of every detail connected with the making of process blocks and their particular uses in printing, and was fully conversant with the latest and most up-to-date methods of producing half-tone and other process blocks.

Mr. SUTTON briefly described the camera and its many uses, and proceeding with his subject, the "Half-tone Process," it was dealt with in detail after a short outline of the principle governing the making of a screen block in relief for letterpress printing. Having explained that a relief block required hollow spaces for the lights of the picture, and solid metal for the shadows and between tones, and that dots of varying degrees of fineness would graduate the tones of the picture from the extreme light to the extreme shadow, the lecturer proceeded to carefully explain how this dot structure was formed. The sensitising of the collodion plate in silver nitrate and the subsequent stages of the negative were made quite clear. The sensitising of the metal, the print from the negative, and the hardening of the sensitive enamel until the insoluble dots become an acid resist, were also clearly explained. Finally the etching of the plate, which in every detail was explained, made the representative body of printers present eager for the questions which were to follow.

The questions may be literally described as a bombardment. The smallest detail in half-tone was soon brought to light and the three-colour process was practically pulled to pieces, as far as questions and answers go. Microscopic enlargements of the structure of the half-tone dot, and specimens of almost every conceivable screen made, were shown, the whole of which proved most interesting and instructive. The discussion was productive of numerous and varied enquiries in regard to both half-tone and three-colour process blocks. After various opinions had been expressed, it was agreed that a proper and definite standardisation of colours for the makers both of inks and blocks for three-colour work should be insisted upon by the printer, and that deviations therefrom should not under any circumstances be permitted.

The lecturer was warmly eulogised by the PRESIDENT for his very interesting lecture and answers to the various questions raised, and the vote of thanks moved by him was seconded by the VICE-PRESIDENT (Mr. Moore), and fully endorsed by all present.

Mr. SUTTON suitably responded.

Some splendid specimens of blocks and prints were exhibited during the evening, showing the treatment of the process in the employment of different screens, from 55 to 200 lines per inch, and they were admired by many enthusiastic craftsmen.

"Winter's Pie."

We hear from Mr. Hugh Spottiswoode that the second issue of *Winter's Pie* is to appear on November 3rd. The usual large number of eminent authors and artists have contributed to this popular publication, and the list includes the following :—Stories by G. B. Burgin, Egerton Castle, Lt.-Col. Newnham-Davis, Walter Emanuel, Athol Forbes, H. Hamilton Fyfe, Tom Gallon, Harry Graham, R. S. Hooper, Keble Howard, Arthur Lambton, Sir Henry Lucy, Barry Pain, Mostyn T. Piggott, William Le Queux, W. Pett Ridge, Ethel and Adrian Ross, George R. Sims and J. Ashby-Sterry.

Drawings by Mabel Lucie Attwell, Lewis Baumer, George Belcher, H. M. Brock, Fred Buchanan, Dudley Buxton, Hilda Cowham, Charles Crombie, Hesketh Daubeny, T. C. Dugdale, Harold C. Earnshaw, Charles Folkard, Charles Grave, Dudly Hardy, John Hargrave, Charles Harrison, John Hassall, Chris Heaps, S. Hebblethwaite, L. Raven-Hill, A. E. Horne, E. Huskinson, Charles Ince, Gunning King, Arthur Lee, Harry Low, Savile Lumley, Wilmot Lunt, J. McWilson, Thomas Maybank, A. Wallis Mills, Hawley Morgan, Norman Morrow, Nibs, Will Owen, Charles Pears, Bertram Prance, Frank Reynolds, W. Heath Robinson, Harry Rountree, Tony Sarg, E. H. Shepard, G. L. Stampa, G. E. Studdy, Charles Sykes, Lance Thackeray, J. H. Thorpe, Louis Wain, Godfrey Wilson, Lawson Wood and Starr Wood.

Orders should be placed early by those desirous of securing a copy as there cannot be any reprint. *Winter's Pie* is published by the *Sphere* and *Tatler*, Ltd., Great-new-street, E.C., at 1s. net.

THE commercial value of good taste, to buyers of printing, is marked by the rising demand for advertising managers, keen in their sense of appropriateness and expert in their knowledge of the harmonies of subject-matter with paper, type, form and colour.

¶ Of two catalogues, the same in purpose, but differing in quality, the one built on the laws of good taste will win by a margin big and decisive. Tests have proved this—and the truth of it is spreading.

¶ With this recognition has come an insistent call for men of good taste, and with the vision of its possibilities, who can plan, lay out, and put through the printing campaigns of high-grade houses.

¶ To such houses and to such men *The Graphic Arts* comes as a magazine full of suggestions, and educational features that stimulate good taste in all the factors that make for good printing.

¶ Send 30 cents for a sample copy.

In AMERICA

There is published only one weekly paper representative of the interests of employing printers. It is the most popular Printers' Paper read in that country:—

Because it is the Trade Business Journal.
Because it has a splendid news service, with twenty-two paid correspondents.
Because it deals with the practical always.
It is the only Paper which holds the attention of the man who owns the plant.

The PRINTING TRADE NEWS does not attempt to teach printers to set type, but it is the foremost authority on the latest efficiency methods, the organization activities, progress in cost system work, approved methods of printers' advertising and anything and everything that tends to make the printing business a pleasant and profitable one.

It is pre-eminently the trade journal English machine builders should use to make their product known in America.

We have good mechanics. Let us have good business men. Let the NEWS come to YOU every week. Europe **$5.00** per year; Canada **$3.00**. 64 pages weekly.

Foreign and British Paper.

Our Foreign Trade.

There was a further falling off in the imports and exports of paper last month, although the returns for the nine months still show a substantial increase. The total values for September and also for January-September are as under, with increases or decreases compared with the corresponding periods of last year:—

SEPTEMBER.

Imports...	...	£641,364 —	£15,420
Exports ...	...	295,217 —	45,738
Re-exports	...	38,226 +	20,757

JANUARY-SEPTEMBER.

Imports	... £5,691,607 +	£400,274
Exports	... 2,795,448 +	205,212
Re-exports	... 224,099 +	95,961

Imports.

The feature of last month's imports was the heavy decline in the receipts of reel paper, there being a depreciation in value of £46,453 compared with September of last year. Shipments from Newfoundland show a drop of £44,971, from Norway £1,632, and from Sweden £7,820, whilst increases were registered by Germany and the United States of £879 and £1,715 respectively. In regard to the supply of reel paper to the United Kingdom last month's figures show that Newfoundland holds premier position, followed by Norway and Sweden. Printings and writings not on reels were in better demand to the extent of £6,894, the receipts from Germany and Norway being particularly prominent. Whilst hangings show an increased importation of £402, other printed or coated papers fell off to the extent of £1,026. Foreign packings and wrappings continue to find an expanding market in the United Kingdom, last month's value being higher by £15,628, due to increased imports from Germany, Norway and Russia. Boards mark an increase of £3,501, notwithstanding that strawboards were in less demand. Unenumerated and articles of paper show an improvement of £5,634. For the nine months ended September the only weak spot in the imports is printed paper-hangings showing a drop of £4,998 and other printed or coated papers a reduction of £13,023. Other qualities, compared with January-September of last year, show the following increases:—Printings or writings, on reels £18,733. and not on reels £30,438; packings and wrappings, £198,347; strawboards, £89,360; mill and wood pulp boards, £33,711; and unenumerated, £47,706.

Exports.

A check has been given to the exports of British printings. Last month, compared with September of last year, there was a decrease in value of £42,450. The shipments to British Possessions were of the value of £87,165, and to Foreign Countries £57,096, decreases of £33,206 and £9,244 respectively. Quite a slump was experienced in business with Australia, and Canada, New Zealand, India and South Africa were all weaker markets. The Colonial demand for writings has also fallen away, the supplies during September amounting to £28,643, a comparative decrease of £2,679; exports to Foreign Countries were of the value of £13,288, a decline of £531. The total reduction in the exports of writings, therefore, amounts to £3,210, Australia being responsible for £2,526. The demand for hangings evidences a falling off of £5,570, and envelopes £1,254, but the exports of other goods mostly show increased values. The figures for the nine months ended September, notwithstanding the setback last month, show a very healthy expansion in the exports of printings. British Possessions took £900,528 worth, and Foreign Countries £512,763 worth, increases of £88,805 and £54,196 respectively, a total of £143,001. Writings, however, show a drop of £1,172, due entirely to a lessened demand on the part of British Possessions. The latter's purchases were of the value of £240,965, a decline of £3,879 compared with January-September of last year, whilst exports to Foreign Countries amounted to £106,980, an increase of £2,707. The shipments of packings and wrappings show an increase of £41,219, and paperhangings an advance of £8,272. With the exception of a decline of £16,419 in other printed or coated papers, the exports of all other classes show increases in value.

THE Cheapening of 'Revived" Printing.

In one of his recent announcements, Mr. P. L. Warner, publisher to the Medici Society, says that English printing as an art was, perhaps, dead when in 1891 William Morris founded the famous Kelmscott Press. Many others have, since then, borne their part in what has been termed "The Revival of Printing." All such printers, Morris not excepted, have failed to make excellent printing anything less of a luxury than it had previously been. "Editions limited to 300 copies at £00 each are emphatically not for 'you and me.' Yet you and I are those who, the good Socialist maintains, are the true and only judges, whether of that which is fitting in taxation or true among the arts. The Riccardi Press is told by all the critics that its work may 'worthily stand beside' that which came from the Kelmscott Press. But the Riccardi Press claims that it, alone among all the revivalists of printing, has come down into the market place, where shillings to their holders possess a value as great as, or greater than, that of the sovereign in other hands." This latter remark refers to the "Riccardi Press Booklets," published at 5s. and 6s. net each. At the former price three works have already been issued, viz.: Omar's "Rubaiyat," Boccacio's "Story of Griselda" (the last tale in the Decameron), and "The King who knew not Fear," by an anonymous modern author. The 6s. books include Shakespeare's Sonnets, and the "Cupid and Psyche" of Apulius. Those who are interested in this most recent phase of "Private Press" typography should ask Mr. Warner for a prospectus of the 8vo. series of Riccardi Press books, which includes some specimen pages displaying the Riccardi types and presswork. There is evidently a fair amount of interest manifested in "The Revival of Printing," judged from the fact that Mr. Robert Steele's book with that title (which was really a bibliographical catalogue of the works issued by the chief modern English presses) is now quite out of print so far as the publisher is concerned, all the 350 copies having been disposed of. It will be remembered that we had an article on this subject, embodying references to the Riccardi Press books and type, in our issue of November 2nd, 1911.

"POATES WAX ENGRAVING SUPERIORITY" is the title of a pamphlet to hand from the L.L. Poates Engraving Co., of New York, containing specimen illustrations printed from plates engraved by this wax process. Judging by these specimens the process is capable of the finest and most delicate work and is adapted to many forms of application. It is not only suitable for map work of all varieties, but also for diagrams, forms, tabular work, drawings of machinery, architectural drawings and sketches, medical and chemical charts, stenographic text books, copy books, commercial script work, geometrical diagrams, etc. The process is claimed to be very simple, and the copy required is of the simplest character. Blue-prints, white-prints, or even pencil sketches may be used. Pen and ink drawings are not necessary, as with photo-engraving, nor is it necessary to employ a draughtsman to letter the copy. All reference letters, titles and descriptive matter may be written on copy with pencil, nor is it necessary to have special inks, paper, or presses. The plates made from wax engravings are deep, sharp, clean-cut, hard copper electrotypes, capable of producing thousands of impressions on any standard paper, and, with fair press work, the last impression will be as good as the first. By the wax process, the names, index letters and symbols are stamped into the engraved matrix with clean, new, perfect type, cast for this work in a great variety of styles and sizes, thus securing a uniformity impossible to attain in hand work.

Tariff Changes

AND

CUSTOMS REGULATIONS

(From the "Board of Trade Journal.")

UNION OF SOUTH AFRICA.

The Board of Trade have received a copy of a notice from the office of the High Commissioner for the Union of South Africa regarding the regulations as to the prepayment of duty on catalogues, etc., sent by post from the United Kingdom to the Union of South Africa.

It is stated in the notice that the Government of the Union of South Africa have notified, in connection with the tariff of Customs duty on advertising matter, including catalogues, price lists, almanacks, calendars, labels, posters and show cards, that when any of above-named articles are sent to any person or firm in the Union of South Africa through the medium of the post office, the duty payable thereon may be prepaid by means of stamps affixed to each separate letter, packet or parcel. Stamps of various denominations may be purchased at the office of the High Commissioner for the Union Government of South Africa, 32, Victoria-street, London, S.W.

The duty on the articles enumerated above is 2d. per lb. or 25 per cent. *ad valorem*, whichever shall be the greater. In connection with the above, senders are reminded that a certain differentiation is made between catalogues of South African firms posted to persons or firms in the Union of South Africa and those of non-South African firms.

A South African firm is defined as a firm having a place of business in South Africa at which stocks are held for sale.

The following assessment is now in force for catalogues of non-South African firms:—

Up to 8 ounces ... ... Free
Over 8 ounces and up to 16 ounces ... 2d.
Over 16 ounces and up to 24 ounces... 3d.
Over 24 ounces and up to 32 ounces... 4d.

and, thereafter, at the rate of 1d. for each additional 8 ounces or fraction thereof.

The same scale is to apply to catalogues of South African firms, except that 1d. be charged on any catalogue weighing under 8 ounces.

The minimum duty payable by means of postage stamps is 1d. The stamps must be affixed to the top left-hand corner of the packets.

Under the Imperial Post Office Regulations packages or parcels of over 5 lbs. in weight must be sent by parcel post, in regard to which there are special regulations dealing with the question of Customs Declaration of contents and value. No duty can, therefore, be prepaid by means of stamps on packages of advertising matter over 5 lbs. in weight.

NEW ZEALAND.

It is announced that files or folios of cardboard, unprinted, used in technical schools for holding drawings, etc., are dutiable under No. 148 of the Tariff, at the rate of 30 per cent. *ad val.*, or 20 per cent. if British.

NETHERLANDS.

Carpenters' lead pencils are, in future, to be classed as "small wares," and thus dutiable at 5 per cent. *ad val.*

THE *Theosophical Path* (Point Loma, California, edited by Katherine Tingley) has for the principal features of its October issue:—"The Essential Truth of Christianity," by a Christian and a Theosophist; "The Romance of the Dead," by Henry Ridgely Evans, 33° (Hon.); "Man's Greater Self," by H. T. Edge, M.A., and "The Island Continent," by Rev. S. J. Neill. Shorter articles are: "James Macpherson and the Poems of Ossian," by P. A. M."; "Is there a Hell?" by H. Travers, and a poem by Kenneth Morris, the Welsh poet. For illustrations, which as always form a most attractive feature of this magazine, are a series of magnificent views of Yosemite Valley; Land's End, England; Australian scenery; Würzburg, Germany, and a very interesting series of the International Theosophical Peace Congress recently held at Visingsö, Sweden.

The Condition of the Labour Market

IN THE

PRINTING AND ALLIED TRADES.

HOME.

According to the Labour correspondents of the Board of Trade, whose reports appear in the *Board of Trade Labour Gazette* for the current month, employment with letterpress printers was fair on the whole during September, and better than a month ago and a year ago. (See Table.)

In London, employment with compositors was reported as slack, and worse than a month ago, though better than a year ago. In other branches it was fairly good, and better than a month ago and a year ago.

In other centres, employment was fairly good, and better than a month ago and a year ago. It was slack, however, with letterpress printers at Leeds, Sheffield, Nottingham, Birmingham, Bristol and Dublin.

COLONIAL.

There is said to be no demand for workers in the printing trades of New South Wales. In New Zealand also, although employment has been fair of late, there is no demand for more labour.

FOREIGN.

From France, it was reported that during August there was practically no change in the volume of employment in the printing trades. In Germany there was a slight falling off, the percentage of unemployed trade unionists, out of a total of 66,300, rose from 6·1 to 6·9, as compared with 6·6 in August last year. In the Dutch printing trades, the percentage out of 7,443, was 0·7, against 0·4 in July, and 0·9 in September, 1912. In Norway unemployment increased somewhat, viz.: from 1·9 to 2·7, out of a total of 1,925. In August last year it was only 0·9.

ROLLERS

For every class of printing and every description of machine.

Known throughout the World for the past forty years FOR QUALITY.

Price List free by post. This will give Diameters, Lengths, and other details of over 100 Rollers in running sizes.

Our Rollers should be judged by the quality and quantity of work done in a given time and the saving so effected, as well as by their durability and economy.

All inland carriages paid.

Boxes lent for roller transit.

Contractors to H.M. Printing Offices, India Office, Hon. Board of Inland Revenue, &c., for the past thirty years, and to the Printing Trade generally for forty years.

?

Can I Adopt Machine Composition with Economy?

Oftentimes the Printer purchases a composing machine without being SURE that it will set the many and varied jobs passing through the house—and then when he finds it will *not* set the very work for which he bought it he says machine composition is not economical: because the idle hours have to be charged to the producing hours.

The Cost of Investigation is Nil

The MONOTYPE MACHINE does perform all that we say it will, which includes all the work done by other composing machines plus the work they *cannot* do

THE WORK THEY CANNOT DO is the work you may need to do, therefore

It is Costly for You to Experiment

We have done the experimenting for the Printer, who secures the beneficial results

Demonstrations can always be arranged

American Printers' Engineers.

Their Opinions on the New Tariff.

The reduction of 15 per cent. on printing machinery under the new tariff, although it paves the way for an opening for British firms to exploit their wares in the United States, is not seriously regarded as affecting the home trade by a number of the makers of printing machinery in that country, or at least they prefer to believe that their position will not be attacked by foreign firms in their own line of business. The matter was brought up the other day in the annual report of the Mergenthaler Linotype Co., which states that the "newly enacted tariff law places Linotype machines on the free list, although protection of 20 per cent. is extended to general machinery, and as high as 45 per cent. to special classes of machinery which are largely exported from the United States. What will be the effect of this tariff, bringing an American company, forced to pay high prices for labour and material, into direct competition with Europe and its cheap labour, remains to be seen."

To obtain a definite expression of opinion from a few of the leading American firms our contemporary, the *Editor and Publisher*, of New York, caused a representative to interview them on the matter, and in its current issue publishes the results, from which we extract the following:—At the New York office of Messrs. R. Hoe and Co. the man interviewed said:—"It is altogether too early to say what the effect of the reduction will be. Some time must elapse before appreciable results of the new tariff can be gauged. Generally speaking, the American manufacturer should not have much to fear. With the exception of a few presses for lithographic work little printing machinery is imported at present. The presses shipped from Germany and France go generally to South America. They have found little favour in this country because of light construction. Since the cost of raw material needed in the construction of a press is only about 20 per cent. of the selling price, the advantage gained by the foreign manufacturer by the reduction of 15 per cent. is not great in that direction. However, there is the fact that wages abroad are from 33 to 45 per cent. lower than in the United States. But even with that American manufacturers of presses and printing machinery should be able to cope. There are no basic patents on printing presses in this country, and this factor of protection is, therefore, not in existence. I am sure that with a little adjustment the contingency can be met by the American producer of printing machinery."

Mr. Ralph C. Seymour, of the Goss Printing Press Co., expressed himself similarly. "There is still," he said, "a protective margin of 15 per cent. In addition there is the fact that so far no foreign presses are used by American newspaper publishers. The presses manufactured in Germany, France and England are too light as a rule, while I appreciate the great mechanical skill of the foreign designer and workman, I believe that very little of it has so far been given to the printing press. That the foreign printing machinery producer might have no difficulty in working up to the American standard is possible, but at the best his start would be late, and an invasion very expensive. The reduction made in the tariff on printing machinery is hardly great enough to warrant the effort he would have to make to become a dangerous competitor to the American manufacturer."

Mr. Benjamin Wood, of the Autoplate Co. of America, expressed himself to the effect that his own firm, protected by patents, would not be influenced by the tariff reduction, and that the fifteen per cent. margin of protection still maintained would be sufficient to protect the industry. He was inclined to think that whatever competition should arise between America and foreign manufacturers would have a beneficial effect upon the production of printing machinery in the United States. The new tariff, he said, would result in an increase of ten per cent. on flong, or about one cent per matrix.

From the Duplex Printing Press Co. no statement could be obtained, other than that at this time it would be impossible to speak of the effects of the new tariff with any degree of certainty.

The impression seems to prevail that the position of the American manufacturer is still secure. It is held that the foreign producer would be obliged to maintain in that country a very expensive base, and that the possibility of future revisions of the schedule is too great to permit him to re-standardise his presses and machinery. At present no parts of foreign make can be used in American presses, and *vice versa*, a condition which, it is said, would act as a deterrent to those inclined to save the difference between the foreign and American products.

The Views of the Paper Trade.

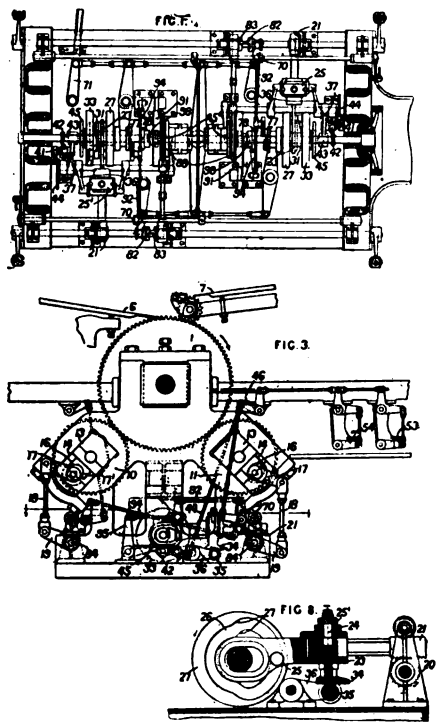
"The paper and pulp interests in the United States have hardly recovered from the shock of the proposed tariff revision, as affecting the paper and pulp industries," said Mr. Arthur C. Hastings, president of the American Paper and Pulp Association, when interviewed the other day. "Briefly, while Congress has left a duty on many of the materials they import, they have taken all the duty off of news-print paper and wood pulps, not for the benefit of the public, but because of the political pressure brought to bear upon them by the Newspaper Publishers of the United States, not all of whom, however, have taken as selfish a view of the matter as most of the metropolitan papers. There has also been pressure through the personal interest of legislators in their home papers, who believe a reduction in the duty would mean a large profit to the publications." He added: "Other than the gross favouritism shown in the present Underwood Bill, I should say as a whole, it is not unreasonable. Time will tell."

The effect of the reduction of the U.S.A. tariff on Canadian paper and pulp companies, according to local opinion, will be less than appears at first sight, owing to the provision already in force under the old tariff that the products of timber cut on patented or freehold lands crossed the U.S. border free. Practically all of the big Canadian companies own outright big tracts of timber lands. The Lake Superior Pulp Co. alone has cutting rights over 1,665,000 acres of the Algoma Central Railway grant, in addition to 3,000,000 acres of Government land. As in the case of the Spanish River and Ontario Pulp and Paper Companies, even the paper made from timber cut on Crown lands goes into the States duty free.

C. S. Hamlin, Assistant Secretary, Treasury Department, Washington, in a communication dated October 10th, says:—"The Tariff Act of October 3rd, 1913, operates to repeal Section 2 of the so-called Canadian Reciprocity Act of July 26th, 1911."

Regulations regarding the application of a countervailing duty on printing paper under the new tariff law have been issued. Collectors are instructed to collect a countervailing duty under paragraph 322 of the Tariff Act on printing paper valued above 2½ cents per pound, when imported from British Columbia, Quebec, Finland or Portugal.

Wood pulp manufactured in Sweden from wood grown in Russia is not entitled to free entry into the United States, according to a decision by Assistant-Secretary of the Treasury. This is in keeping with the States Treasury Department's policy in denying favoured-nation treatment to Russia in connection with wood pulp and paper because of the abrogation of the treaty of commerce between the United States and Russia.



It is reported from Washington that the Treasury Department has refused the application of American manufacturers to prohibit under the new tariff the entry of British cotton bagging, which the manufacturers allege is partly made by convict labour.

Multi-Colour Printing.

Under an invention by Mr. W. S. Warnock, a printing machine is constructed with a number of impression surfaces on one cylinder and with means for feeding sheets separately to each surface, and with a corresponding number of printing cylinders which may each be arranged for printing in conjunction with one impression surface only, or for printing in several colours on each sheet carried by the impression cylinder. In the former arrangement, the printing cylinders may be tripped individually or collectively when required, and in the latter case they may be collectively tripped when desired. As shown, an impression cylinder 1 is fitted with two impression surfaces coacting with printing cylinders 10, 11, and receives sheets from two feed boards 6, 7. The printing cylinders are mounted in journal boxes 13, which can slide in guides 14 radial to the impression cylinder, and the cylinders are maintained in the printing positions by eccentrics 16, which can be rotated by arms 17, rods 18, and arms 19 on shafts 84 when the printing cylinders are to fall by gravity out of printing position. When the cylinders 10, 11 are each to print on one sheet only, they are arranged to be tripped for alternate revolutions, corresponding to semi-revolutions of the cylinder 1, by moving a hand lever 71 to its right-hand position, as shown in Fig. 1, so as to engage a roller 25 on a cam follower 23, Fig. 8, with a groove 26 in a cam 27 integral with a disc 33, cam 45, and clutch member 77 to be described, whereby the follower 23 is reciprocated. The mechanism is duplicated, so that each cylinder is normally tripped for alternate revolutions, by a rack 21 normally connected to the follower 23 by a pin 24 in a spring controlled yoke 25[1]. The rack 21 engages a pinion 20 on the shaft 84. When it is desired to trip the cylinder 10 or 11, an arm 36, Fig. 8, is raised to cause a roller 35 to act on a shoe 34 on the yoke 25[1], and thereby to break connection between the follower 23 and rack 21. The arm 36 is operated by moving a

Digitized by Google

pin 43 on an integral arm 37 laterally into the path of the cam 45. This pin is formed integral with a groove cam 42 operated by a spring controlled helical cam 41 mounted in the arm 37 and connected to an arm 44, which is connected by a bell crank 46 and other bell cranks and rods to a spring controlled treadle 53. Separate treadles 53 permit each cylinder to be tripped individually, but treadles 54 are arranged to trip both cylinders. The treadles 54 are not affected by movements of the treadles 53. When it is desired to print from each cylinder on to all the sheets carried by the impression cylinder 1, the lever 71, Fig. 1, is moved to the left, thereby moving the parts 27, 33, 45, 77 towards the centre of the machine, the cams 27 being disengaged from rolls 25 on the followers 23, and plain

grooves in the discs 33 engaging the rolls 31 on the other sides of the followers to cause the printing cylinders to remain in constant action. The movement of the lever 71 also throws in clutches 82, 83 for permitting the shaft 84 to be operated by racks 88 when it is required to trip the cylinders with this arrangement of printing. To effect this tripping, one of treadles 54 is depressed, and operates through an arm 70, a rod 92, a swinging arm connected with lost motion, a rod 94, and a bell crank 95 to remove a roll from a cam groove 98 in a clutch element 78, which, when the roll is removed, is moved laterally by a spring to cause the clutch elements 77, 78 to engage. The racks 88 are thereby moved by cams 91 to trip the cylinders, and cams 45[1] similar to the cams 45 break connection between the followers 23 and racks 21 to permit the shafts 84 to rotate to effect the tripping. A spring pressed detent is used to prevent the cam 91 from creeping.

The November issue of the *Royal Magazine* has on its cover a characteristic portrait of Harry Lauder, and appropriately its first article is from the pen of that popular Scottish singer. The fiction is as usual good and readable, and the other contents in the form of articles, poems, jokes, and pictures, are up to the usual high standard of this popular monthly.

"Photograms of the Year 1913." London: Hazell, Watson and Viney, Ltd., 52, Long-acre, W.C.

The publication of this pictorial annual for photographers, instituted by the late Mr. H. Snowden Ward, has always been a notable event in the photographic calendar during the past eighteen years. It is essentially a pictorial record of the year's work with the camera, and as such it is eagerly looked for and studied, not only by those who may be regarded as pictorial workers in photography (who represent a very large class indeed), but by all who use a camera and are lovers of pictures in any form. "Photograms of the Year" may be regarded as the only annual giving profusely illustrated reviews of the world's photographic pictorial work, and is now edited by Mr. F. J. Mortimer, F.R.P.S., the editor of the *Amateur Photographer*. This year's annual is an advance in its get up on all previous volumes. It is profusely illustrated and beautifully printed. The fine reproductions are in most cases exact *facsimiles* of the original pictures, and the book forms a volume of large proportions, containing upwards of 140 pages (demy quarto) of literary and pictorial contributions. Work has been contributed from leading workers in the United Kingdom, America, Canada, France, Holland, Germany, South Africa, Australia, Austria-Hungary, Spain, Russia, and many other places where pictorial photography is largely practised. The editorial contribution deals with "The Year's Work—Comments on Photographic Pictorialism and Pictures"; Mr. Anthony Guest, the well-known critic, writes on "The Need of an Artistic Standard"; Mr. F. C. Tilney gives a critical review of the Royal Photographic Society's exhibition and the London Salon of Photography; while other literary contributions include "Pictorial Photography in France," by Robert Demachy, of Paris; "Pictorial Photography in Germany," by F. Matthies Masuren, of Halle (editor of *Photographische Rundschau und Mitteilungen*); "Pictorial Photography in Russia," by N. Petrow (editor of *Photographitchesky Viestrik*); "Pictorial Photography in Austria," by Albin von Palocsay (editor of *Wiener Mitteilungen*); "Pictorial Photography in Hungary," by Victor Hoffmann (editor of *A Feny*); "Pictorial Photography in Canada," by H. Mortimer-Lamb, of Montreal; "The Year in Australia," by Walter Burke, F.R.P.S. (editor of the *Australasian Photo Review*). Undoubtedly "Photograms of the Year" is a book that every photographer who takes an interest in pictorial work should secure, and the hundred pages of illustrations, many of which take the form of specially mounted insets, including a fine three-colour reproduction from a screen-plate picture in natural colours, are all worth the attention of every lover of good pictures. The price of the volume is, paper covers, 2s. 6d. net; cloth boards, 3s. 6d. net.

The Ideal Code Condenser.—The Central Translations Institute, 16, Eastcheap, E.C., issue the "Ideal Code Condenser," of which a second edition has just been published. The object of the "Condenser" is by means of figures to condense two code words taken from a numbered code such as the A.B.C. into one artificial word, thus saving half the cost of transmission. The "Ideal Code Condenser," however, goes further, as it permits of several different numbered codes being employed in the same message at the rate of two phrases to one word, the recipient being at the same time informed from which code to read each part of the message, with a two-figure safety check against mutilations. In other words, thirteen figures are transmitted in one ten-letter word with absolute safety and clearness and with a minimum of trouble. The telegraph administrations of the United Kingdom, France and Germany have, on behalf of the International Telegraph Union, examined the "Ideal Code Condenser" and have issued a certificate in virtue of which the words compiled from same cannot be queried or rejected, which is a most important consideration. This handy and indispensable publication is sold at £1 1s. per copy. The Institute also issues a very useful set of "Standard Metric Equivalent Tables," giving the equivalent of foreign monies, weights, etc., in English; these tables are sent post free for 1s. 2d., and they will be appreciated by all who have to refer to metric weights and measures.

In *Pearson's Magazine* for November, there is a contribution from Mr. Michael West, summing up the peculiar merits and qualities of "Woman's Mind *v.* Man's." Mr. West is well known as an exponent of modern psychology, and his articles on "Measuring the Mind" earlier in the year will doubtless be recalled. In a lighter vein, there is an article on "The Latest in Hats," which is illustrated with special photographs of the newest Parisian millinery. Miss Margaret Morris, the dancer, gives her views on "Dancing for the Million" in lively fashion. The Marchioness Townshend figures as the author of some gracefully phrased verses on the subject of "Autumn." The fiction is bright and varied, and includes a pollyooly story by Edgar Jepson, an adventure story by F. St. Mars, "Prattle about Parties"—another instalment of the witty "Notions of a Nut" series, illustrated by Lewis Baumer — and contributions by Jessie Pope, O. Henry, and L. J. Beeston.

British Trade with Canada.

The importations of Canadian paper into the United Kingdom during 1912 and the four preceding years were as under:—

	Total Imports.	Retained in U.K.
1912	£137,584	£137,584
1911	141,137	141,086
1910	182,739	182,699
1909	221,226	221,084
1908	229,932	229,932

Canadian paper retained in the United Kingdom comprised the following:—

Paper for Printing or Writing.

1912	77,015 cwts.	£41,594
1911	99,545 ,,	55,811
1910	186,881 ,,	92,691
1909	326,141 ,,	161,790
1908	343,434 ,,	179,934

Straw, Mill and Wood Pulp Boards.

1912	217,771 cwts.	£95,990
1911	193,862 ,,	85,275
1910	199,276 ,,	90,008
1909	132,387 ,,	59,294
1908	122,667 ,,	52,998

The following figures show the exports of British paper to Canada during 1912 and four preceding years:—

1912	178,067 cwts.	£266,763
1911	152,854 ,,	233,063
1910	147,565 ,,	218,738
1909	105,337 ,,	169,164
1908	84,935 ,,	130,265

Printing (typographic and lithographic) works increased in St. Petersburg in 1912 from 156 to 167, and the workmen from 10,313 to 11,433.

Safety Bronzing Cabinet

Patent No. 11291/10.

Cabinet Open, and showing Detachable Tray.

BEST QUALITY WORK
NO DANGER TO OPERATOR
NO WASTE OF BRONZE
INCREASED OUTPUT

THIS Bronzing Apparatus has been introduced to enable Bronze Powders, etc., to be applied by hand without any particles of powder floating about the room, or being inhaled by the operator.

It consists, as shown in the illustration, of a box fitted with hinged transparent top and transparent ends. The side nearest the operator has apertures fitted with flexible sleeves with springs to close round the wrists of the operator, so that, although his hands and arms are free to move inside the box, no powder can escape.

The bottom of box is perforated and allows the surplus powder to fall into a detachable tray underneath. The sheets or cards to be bronzed are fed direct from the platen into a narrow horizontal slit fitted with sloping feed board.

This apparatus is made throughout in our own Works, and the edges of the lid and detachable parts are made dustproof. There is no waste of bronze and no injury to the health of the operator, and nothing to wear out. The bronzing is executed immediately under the eyes of the operator, ensuring finest quality work.

JOHN HADDON & CO.
SALISBURY SQ.
FLEET STREET.

Overtime Charges.

An Interesting Decision.

In the City of London Court, last week, before Judge Lumley Smith, K.C., Messrs. A. H. Stanley and Co., printers, 17, Bouverie-street, sued Messrs. John H. Rudin and Co, 199, Strand, for £3 14s. expedition charges in connection with printing a pamphlet called "May Meeting Guide." Mr. Harry Strouts, plaintiffs' solicitor, said they charged £17 17s. 6d. for printing the book and that had been paid, but the sum now claimed was for extras. The proofs were not submitted in time and the last proof was not submitted to the plaintiffs until some time in April. On April 24th defendants' manager said they must have the job completed by the next morning. Plaintiffs said if that was to be done defendants would have to pay extra charges for expedition fees as the men would have to work overtime. Defendants now thought the extra work should have been done for nothing. Plaintiffs' traveller, named Humpage, said that the defendants told him they were getting into trouble with the Sunday School Union because the pamphlet was not out. It was not the plaintiffs fault, because the defendants had had trouble in getting advertisements and dates of meetings from some of the societies. That upset defendants' calculations and he told the defendants distinctly that they must pay for overtime if the job had to be turned out by the morning. The reason for defendants' hurry was because S. W. Partridge and Co. were also publishing a May meeting guide and defendants wanted to be out first. They had to put other work aside although the defendants had agreed that they should have a fortnight's time for delivery from the time the proofs were passed. Mr. W. H. Smith, plaintiffs' manager, said they had to pay one and a-half to twice as much for overtime. Mr. W. B. Smith, manager of the City Printing and Publishing Co., Farncombe-street, Bermondsey, said that where overtime was ordered although a definite contract had been made the customer had to pay for it. Hall, defendants' manager, said he never agreed to pay for any overtime. When he called on the plaintiffs he simply said he must have 100 copies by the next morning as the work was wanted. He had no power to contract to pay for overtime. It would have been in writing if he had done so. Judge Lumley Smith, K.C., said he believed Hall. The bargain was for an inclusive price which had been paid. Everybody was getting put out about the delay and he did not believe Hall agreed to pay for overtime. He thought, however, it would have been reasonable to pay something because plaintiffs had been put to further expense. He thought the plaintiffs did the extra work with the reasonable belief that the defendants would pay, but there was no contract to pay and the defendants would not pay. They ought to pay something, but a legal claim was not made out. Judgment for the defendants with legal costs.

FIRE.—Fire broke out one day last week in the basement of the Sunday School Union's magnificent block of buildings, five storeys high, in Old Bailey, London, E.C., and when the alarm was given, the private escape of Messrs. John Dickinson and Co., paper-makers, whose City premises are close by, was brought into use, and the lives of four persons were saved by it. So dense was the smoke that the firemen found it impossible to locate the fire until smoke helmets were brought into use. While the brigade were at work a gas meter exploded, and several men were hurled backward, but fortunately they escaped injury. The valuable library in the building containing 10,000 volumes also escaped damage.

AT the Worksop Urban Council meeting, last week, a lively discussion took place as to whether tenders for the Council's printing should be confined to printers in the town or given to outsiders. It was finally resolved to ask for a tender from an outside source to see how it compared with those of the Worksop printers.

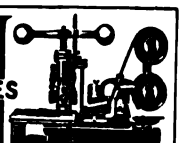
How Money is Lost.

Everyone who has sold printing knows that a job can be sold at a profit under ordinary everyday conditions of manufacture and delivery; but while a profit exists under these conditions, it would entirely disappear if the work was executed under other conditions. There are many times when profit disappears after the order has been sold at a price that carries with it, under normal conditions, a fair margin above cost of production.

I have in mind a shoe catalogue that was entered on the books of a large eastern printing concern, in which all ordinary precautions had been taken in securing the order, even to the extent of submitting a sample page of composition for style; the price was agreed on and the order went through; but when the customer received his page proofs of this job he insisted on having mitered rule borders around each page and changing the type from ten to eight point, which practically more than doubled the composition on the job. The result was a loss when completed, instead of a profit. The fault was, in selling the order the salesman did not state to the customer clearly that his catalogue was to be ten-point, and the price quoted did not include border around pages, although the sample page submitted for style which the customer O.K.'d was exactly according to these specifications. You may say that the customer was unreasonable and that the changes should have been charged as extra. I grant this is true; but where all details are not covered specifically in closing the order, it leaves an opening whereby either the profit in the job may disappear or the customer will disappear.



Another job, for a large refrigerator manufacturer: The price was agreed upon and acceptable to both buyer and seller; but when it came to the question of delivery, the customer was so exacting in his conditions that if the order had been entered it would have required overtime and the risk of spoiling the job, for it was run in four colours on coated paper. The house turned the order down after the salesman had accepted it.

Here is another illustration where the profit may disapper: A salesman took an order for a large catalogue from a shoe manufacturer. The price was fair, the account a new one and desirable; but after the order had been received and entered the customer insisted that a special face of type be used for this work; type, too, that was out of the ordinary run of type faces that are used in catalogue work. To accept this order at the price already quoted meant loss. To buy the new material necessary for this one job alone required an expenditure of a great deal more money than the profit which would accrue if the order was carried out. The sales manager turned the order down after failing to get assurance from the customer that if the printer bought the new material the customer would guarantee other catalogue work sufficient to justify this extra expense. These are some of the ways the profit disappears before the order gets through the house, often before it is even started.

No matter how efficient a plant may be, no matter how low the hour costs, unless the job is sold at a profit and under conditions that will enable that profit to be realised, these other things are of no avail.

One trouble heretofore has been that we have given too much information about our business to our customers. We have not treated our business as a business seriously; we have become absorbed in production and have lost sight of profit.—*American Printer.*

THE index and title-page to Volume seventy-two of the *British and Colonial Printer and Stationer* is now ready, and it being contrary to postal regulations to enclose it as a supplement to our usual weekly issue, a copy will be sent to any reader desiring it on receipt of a penny stamp.

In AMERICA
There is published only one weekly paper representative of the interests of employing printers. It is the most popular Printers' Paper read in that country:—
Because it is the Trade Business Journal.
Because it has a splendid news service, with twenty-two paid correspondents.
Because it deals with the practical always.
It is the only Paper which holds the attention of the man who owns the plant.
The PRINTING TRADE NEWS does not attempt to teach printers to set type, but it is the foremost authority on the latest efficiency methods, the organization activities, progress in cost system work, approved methods of printers' advertising and anything and everything that tends to make the printing business a pleasant and profitable one.
It is pre-eminently the trade journal English machine builders should use to make their product known in America.
We have good mechanics. Let us have good business men. Let the NEWS come to YOU every week. Europe $5.00 per year; Canada $3.00. 64 pages weekly.

Necrology

Death of Mr. W. W. Fox.

With deep regret we record the death of Mr. William Waring Fox, of Lynmouth-road, Stamford-hill, for 33 years overseer of Messrs. Waterlow and Sons' letterpress department, which took place last week. Deceased had a nervous breakdown about three years ago, and last June he met with a fall whilst out walking, which confined him to bed for several weeks. The shock resulting from this and a chill he subsequently caught terminated fatally on the 27th ult. Mr. Fox combined a sound practical experience in his craft with a gift of picturesque and forceful expression that won for him many admirers, and his numerous lectures on trade topics always attracted a large audience. He was the originator of a "new lay" of the case, and it was due to his pioneer work that the "point system" was established in this country. He lectured on printers' costs and charges long before the present cost movement in this country was thought of. He read a paper on this subject, in 1893, to the members of the Printers' Managers and Overseers Association, of which body he was a much respected member, and it evoked so much interest that a deputation from that Association met the master printers by invitation at a conference at Stationers' Hall, and it aroused a great deal of interest in the trade at the time. Many other papers were read before this Association and other institutions, by deceased at various times, his life's aim being, as he once said, to improve the working conditions of both employer and employee, knowing that in studying the men by getting good material he was producing good work, increasing its production, saving time and the waste of material and leakage of labour. Mr. Fox edited *Caslon's Circular* for a number of years, and many instructive articles appeared in its columns from his pen. Two years ago he retired from the position he had held so long with Messrs. Waterlow and Sons, and was made the recipient of a 3-piece silver-plated and cut-glass epergne to mark the respect and affection in which he was held by the members of his department, and his apprentices at the same time presented him with a cut-glass silver-plated flower epergne to match the former. Testimony was given, by some of his colleagues, to his remarkable organising abilities and the amicable relations that had always existed under his jurisdiction. Mr. Fox was in his 66th year. The funeral took place on Saturday at Abney Park Cemetery.

The Late Mr. William W. Fox.

The death is announced of Mr. H. E. Fenn, for over 30 years a reporter in the Divorce Court. "Uncle," as he was affectionately known among journalists, was 63 years of age, and was the oldest member of the Council of the Newspaper Press Fund, and one of the original members of the Press Club.

Mr. James Thompson, for 35 years manager of the *Leicester Post*, died on Sunday at Leicester. Mr. Thompson was a native of Edinburgh, and was at one time on the staff of the *Scotsman*. He was a man of large journalistic experience.

The death has occurred at Cairo of Sheikh Aly Yousseff, founder of the leading Cairo Moslem paper *Al Moayad*, and until last year its editor.

The death is announced of Mr. Robert Redpath, for many years manager and afterwards a proprietor of the *Newcastle Daily Journal*.

What is a "Fair Price?"

In the City of London Court, on Monday, before Judge Lumley Smith, K.C., Mr. Henry F. Adlard, printer, trading as Henry Adlard and Co., 21, Nichol-square, claimed £25 7s. 10d. against Mr. John J. B. Cross, company promoter, Broad-street House, and the British Orto Tyres, Ltd., for printing supplied. The proceedings against the company had been discontinued after payment of £4 12s. 6d. Mr. Bray appeared for the plaintiff and Mr. Edgar Dale for the defendant. Mr. Bray said that on October 26th, in consideration of the plaintiff taking up 400 5s. shares in the British Orto Tyre, Ltd., Cross guaranteed to give the plaintiff the printing order for the prospectuses, etc., and the work was done.

Mr. Dale said that the defendant did not know what fair prices meant in the printing trade in reference to company prospectuses. Plaintiff had estimated to supply circulars for the British Orto Tyres Co., Ltd., at £2 18s. per 1,000, and now that the work had been done defendant found that he could get the work done at Waterlow's or any other first-class printers for 16s. 10d. per 1,000. The quotation was in breach of the contract to charge fair prices. The work that the plaintiff was charging £65 for could be obtained elsewhere for £18 6s. 8d., which was such a difference that the defendant said the prices charged ought not to be allowed. Defendant had always been willing to pay the fair charges, and he had paid 16 guineas into Court.

Defendant, who said he was not a company promoter and never would have given the plaintiff the order if he had not accepted his assurance that the prices were fair. In cross-examination he said he was apprenticed to F. W. Potter and Co., Ltd., Queen Victoria-street, printers, on the stationery side of their business, but he knew nothing of printing matters. It took seven years to learn the printing trade. The work in dispute was not wanted in a hurry.

Mr. W. H. Rowsell, of Waterlow and Sons, Ltd., London-wall, and Mr. Reginald Potter, of F. W. Potter and Co., Ltd., gave evidence for the defendant's case. Mr. A. G. White, Whitehall Publishing Co., Ltd., said he would have done the work in dispute for 11 guineas. If the work had had to be done by the next day one third more would have been charged. Judge Lumley Smith said that people must take care of themselves nowadays. If plaintiff's charges were unreasonable defendant need not have given him the order. Defendant could not reduce plaintiff's charges unless he established fraud. Judgment for the plaintiff for the amount claimed with costs.

Tariff Changes AND CUSTOMS REGULATIONS.

(From the "Board of Trade Journal.")

Commonwealth of Australia.

The Board of Trade have received information from the Office of the High Commissioner of Australia in London with regard to the classification of various kinds of pictures for customs duty purposes on importation into the Commonwealth of Australia.

It is stated that the Commonwealth Comptroller of customs has given the following customs decisions, with effect from January 1st, 1914:—

Articles.	Rate of Import Duty.
Pictures.	
Engravings, prints, photogravures, and the like, also photographs—if coloured by hand in oil or water colour ...	£1 each or 25% ad. val. whichever rate returns the higher duty.
Machine printed pictures — if printed or mounted on canvas, and also stretched on a frame ..	" "
Otherwise, unless dutiable under No. 420, or some other heading of the Tariff (e.g., 356 (A) as advertising matter)*	Free.

* The rates of import duty leviable under Nos. 420 and 356 (A) of the Tariff are as follows:—

420. Pictures, being coloured supplements for newspapers, provided the Collector is satisfied that they are for use as supplements for newspapers	3d. per lb.
356 (A). Manufactures of paper, framed (including the weight of the frame) or unframed, having advertisements thereon, including price lists, n.e.i., trade catalogues, n.e.i., show cards, n.e.i., and all printed or lithographed matter, pictures, n.e.i., and posters of all kinds, used or intended to be used for advertising purposes; also all printed or embossed bags and cartons; calendars and almanacs n.e.i.	6d. per lb., or 35% ad val. whichever rate returns the higher duty.

Sierra Leone.

It is prohibited to send stationery to this colony by letter post.

Union of S. Africa.

According to a recent decision, stamp albums are admitted duty free.

At a meeting of the Council of the Society of Weekly Newspaper and Periodical Proprietors held on Monday, it was resolved:—"That this Council desires to place on record its strong condemnation of the recent circulars issued by Reuter's Financial Publicity Department, in which it was indicated that the company possesses special facilities for influencing the editorial columns of the newspaper Press."

Trade Notes.

THE late Mr. John Turnbull Ross, of 10, The Grove, Gosforth, newsagent, has left estate valued at £15,124 7s. 4d. net personalty.

A DINNER is to be given shortly to Mr. Harold Hodge, the late editor of the *Saturday Review*, by his old colleagues on the staff and contributors to the paper.

THE apprentice compositors in the employment of Messrs. Ballantyne, Hanson and Co., Causewayside, Edinburgh, who, as we reported last week, had been on strike, have resumed work, the working conditions having now been satisfactorily adjusted.

THE dispute at the Bradford School of art continues. Three classes — the printing, lithographic, and bookbinding — are affected, and the trade unions who brought about the stoppage refuse to accept the invitation of the Technical Education Committee to allow the classes to resume pending negotiations.

MR. SAMUEL TINSLEY, the second son of the late Mr. Samuel Tinsley, and a nephew of the late Mr. Wm. Tinsley, two well-known publishers of the Victorian era, and who has been for many years general manager of Messrs. Roberts and Leete, Ltd., has started a printing and stationery business in partnership with Mr. Harold Justus Williams, formerly outdoor representative and West-end manager of Messrs. Truscott and Son, Ltd. The title of the new firm is Tinsley and Williams, Ltd., and the address, 29 and 31, Clifton-street, E.C.

AN exhibition of Japanese colour-prints, lent by Mr. R. Leicester Harmsworth, M.P., will be on view in rooms 71–73 of the Department of Engraving, Illustration and Design, at the Victoria and Albert Museum, from today until March 21st next. The collection contains a considerable number of examples of the earlier artists, and is particularly rich in the work of Harunobu Shunsho and other eighteenth century masters, the selection having been made specially to demonstrate the rise, development and possibilities of the Japanese method of colour printing from wood blocks. An illustrated guide to the exhibition has been prepared.

THE Russian Government having decided to participate officially at the International Exhibition for the Book Industry and the Graphic Arts at Leipzig, 1914, and granted 260,000 marks for a national pavilion, Mr. Bellegarde, ex-director of the superior censorship, has been charged with the direction of the Russian section. An organisation committee has been formed in order to take charge of the whole arrangement of the Russian department. The Russian Imperial Academy of Sciences has also decided to make a special display. It is intended to arrange a special section devoted to Tolstoi.

A FIRE broke out last week in a four-storey building at Oswaldtwistle. On the second floor were the Christmas card works of the Alliance Art Co., and on the third Messrs. Arnold and Co. carried on the manufacture of Christmas cards. Before the fire brigades could reach the scene the whole of the four storeys were involved in flames, which were fed in part by the celluloid and other inflammable material used in the manufacture of the Christmas cards, and in less than an hour that section of the mill was entirely gutted. The damage is roughly estimated at over £10,000. The Christmas card firms had on hand large stocks in preparation for the busy season. Happily the outbreak occurred before the employees were in the building.

THE DANGER OF CELLULOID.—It is recommended by the Public Control Committee of the London County Council that Parliamentary powers should be sought to register and subject to regulations all premises (other than those actually licensed under the Cinematograph Act) in which more than 10 reels of cinematograph films are kept or stored, as well as all premises where raw celluloid in quantities of more than 112-lb. or celluloid goods in quantities of more than 560-lb., are kept. The committee also propose that the Council should obtain power to issue special notices to shopkeepers indicating necessary precautions in stocking celluloid, pointing out that the dangers inherent in the storage of cinematograph films have again been evidenced by a serious fire. They also hold that light celluloid articles worn on the person and toys made of celluloid should not be sold without some indication of their inflammable nature.

TENDERS ACCEPTED.—For printing and supplying the Rotherham Corporation year books; H. Garnett and Co. For printing copies of the abstract of accounts for the Bridlington Corporation; F. L. Lee. For the printing of minutes for 1913–14 for the Rochdale Corporation; Wrigley and Sons, Ltd., Acker-street, Rochdale. For the supply of 50,000 borrowers' cards for the Belfast Library Committee; W. Strain and Sons, Ltd.

ACCORDING to *Kemp's Mercantile Gazette* there was only one failure in the printing and stationery trades of England and Wales for the week ending Friday, October 31st, the corresponding week in 1912 showed three.

IT has been decided to form a special Costing Committee for London, to follow up the campaign, and secure the more general adoption of the system. A public meeting at which the system will be fully explained and discussed is to be held on Wednesday next, at the L.C.C. School of Arts and Crafts, Camberwell, at 7.30, when Mr. W. A. Waterlow and Mr. A. E. Goodwin will speak, and Mr. J. T. Jacobi takes the chair. This will be an excellent opportunity for printers in the district to gain further knowledge on this all-important topic.

TENDERS WANTED.—For supply of books, apparatus, stationery, sewing materials, printing, etc., for 12 months, for the Whitehaven Education Committee; forms of tender from the Secretary, Town Hall, Whitehaven. For the supply of books, stationery, apparatus, kindergarten materials, etc., for the Middlesborough Education Committee; particulars from the Education Offices, Municipal buildings, Middlesborough. For the printing and stationery required during year ending December 31st, 1914, for the Chatham Town Council; specifications may be obtained from Mr. J. W. Halloran, town clerk, Chatham.

NEW POST CARDS.—A very attractive selection of picture post cards has just been completed by Messrs. C. W. Faulkner and Co., Ltd., 79, Golden-lane, E.C., embracing subjects that will appeal with particular appropriateness at this season of the year. They are in 6d. packets of six cards, all with the exception of one entitled "Love in Many Moods," which is a beautiful series of coloured figure studies published at 1s. per packet. This, along with the packets, "Lantern Light," "Dancing Tubbies," "Fifi," "The Trossachs," and "Corot," stand out for their originality, humour, and execution, although the other series—"Fairy Tales," "Playful Pets' Jolly Times," "Children of Another Land," "Sweet Songs of Schumann," "Mike," "Moonlight in Mid-Ocean," and "Merry England in the Good Old Days"—are very meritorious in point of execution and design. They are all in keeping with the fine artistic printing, whether in colour or monochrome, that this firm are celebrated for, and the variety of taste and sentiment that they appeal to should win for them wide popularity.

HUSBANDS AND WIVES IN BUSINESS.—In the City of London Court, on Friday, a claim was made by Joseph Asher and Co., pictorial post card publishers, 3 and 4, Ivy-lane, E.C., against G. Pitcher, stationer, Old-road, Great Clacton, for £11 2s. 6d. picture post cards supplied. The proceedings at a former sitting of the Court were reported in our issue of October 9th last. Plaintiffs' traveller now said that he took the order from the defendant's wife, defendant having told him that the business was his, being run in his wife's name. Mrs. Pitcher said she signed the order; but she did not know what the traveller wrote on it before she signed. Judge Rentoul observed that business could not go on if that sort of thing were encouraged. Mrs. Pitcher said she had only been in business for a very short time. Judge Rentoul advised Mrs. Pitcher never to sign anything else, and when she wanted goods to come to town for them. He did not doubt that Mrs. Pitcher did not know what she had done; but the traveller had treated her very fairly. He must give judgment for the plaintiffs for £3 and costs, goods to the amount of £10 being returned, the judgment being against both husband and wife.

FOR some time past there has been trouble in the offices of the *York Herald* on account of the alleged bad working conditions of the reportorial staff, and on Tuesday night a demonstration took place at York. It was held under the auspices of the York Trades Council, and the principal speakers were Mr. J. H. Harley, of London, ex-president of the National Union of Journalists, and Mr. W. N. Watts, of Manchester, secretary of that organisation. There were about 2,000 people present. Mr. Harley said that in no other city in the country had journalists been compelled to produce any stoppage of employment to obtain better conditions in a newspaper office. He spoke of the failure of interviews and representations to obtain better conditions, and said it was time the directors realised that people were not going to stand any longer York being held up to the scorn of journalists of the United Kingdom. A resolution was adopted pledging the meeting to do all it could to support the National Union of Journalists in their endeavour to obtain better working conditions.

MESSRS. RAPHAEL TUCK AND SONS have issued their retail catalogue for the use of the public, an innovation we intimated in our Christmas card review last May, and we learn they are despatching a quarter of a million copies by post to a quarter of a million homes throughout the United Kingdom. While produced in a necessarily condensed form, it gives an excellent indication of the immense volume of the firm's complete line of cards, calendars, gift books, painting and toy books, post cards, pictures, etc., and the practical arrangement of illustrating cards at one price on each page separately will no doubt be appreciated by the public. A novel little mascot is attached to each catalogue, a suggestion of one of the directors, Sir Arthur Conan Doyle. It bears the motto, "I'm a Mascot, Keep me!" its object, of course, being to induce the recipient of the catalogue to keep it and study its pages, which is all in the direction of benefiting the trade.

A COLOUR PRINTING DISPUTE.—An action was heard, in the Derby County Court last week, in which Mr. Wm. S. Hepworth, trading as Messrs. Wills and Hepworth, artistic printers, of Loughborough, sued Messrs. Mansfield Brothers, Gresley Tile Works, for £96 damages for refusal to accept certain printing work for which a contract had been entered into. Plaintiff's counsel explained that the defendants had desired to have some coloured catalogues of their tiles, and had ordered certain work to be done by the plaintiffs. When the proofs were submitted they refused to accept them, and cancelled the order. When negotiations were in process the defendants submitted to the plaintiffs certain water-colour drawings of their tiles which were to be reproduced. They now complained that the reproductions were not in the same colours as the tiles themselves. They had, in the letter on which plaintiffs relied, mainly accepted their offer for tri-chromatic printing in accordance with the samples that had been submitted. For the defence it was contended that the contract was never really entered upon seriously, that although the work was to be finished in two months the contract was not cancelled until after five months, and that as a matter of fact the only sample of tile printing which was supplied to them as a sample of the plaintiffs' work, and upon which they gave the order, was not a sample of their work at all. It was a sample of the printing of another firm. When they accepted the contract and gave the order in accordance with that specimen sheet they cut the sheet in half, keeping one themselves and sending the other back. None of the proofs came up to the specimen sheet retained. Plaintiffs' counsel said it was quite true that the specimen of tile printing was not their own work, but the reason they sent it was that they had no specimens of such work, and thought the defendants would like to see what it was like. The principal complaint against them was not that the reproductions were not facsimiles of the water-colour drawings, but were not like the actual tiles. Witnesses having been called on either side, the expert for the plaintiffs being Mr. W. H. Burchell, his Honour, Judge Alan MacPherson, in giving judgment, said to his mind Messrs. Mansfield were quite unreasonable in their demands, and from a legal point of view he held that they had no right to reject the contract, because the only reason the catalogues were not delivered in bulk was that the defendants themselves cancelled the order before it was fulfilled. He thought the plaintiffs were entitled to recover, and he gave judgment for the amount claimed with costs.

The Bookbinders' Strike.

This unfortunate dispute still continues, no concession to the demands of the men being yet made by Messrs. Burn and Co., and the workers on strike still remaining firm and determined in the position they have taken up. The most important development in connection with the strike at Messrs. Burn's has been the sending of a deputation by the Printing and Kindred Trades' Federation to Edinburgh for the purpose of endeavouring to induce the printing houses in that city to refuse any work from publishers who are sending their binding to Messrs. Burn and Co. It is hoped by the men, says the *Daily Citizen*, that if this move is successful it may lead to a speedy termination of the strike as the volume of trade emanating from the Edinburgh publishers and dealt with by Messrs. Burn is very large.

The Scottish Dispute.

Last week-end the notices of the men employed in the bookbinding shops of Glasgow and Edinburgh tendered their notices, some of which will expire this week, while those of

Digitized by Google

men requiring to give a fortnight will run on a week longer. There are about 400 men affected in Glasgow, and 300 in Edinburgh, while the numbers in other Scottish towns will bring the total to about 850. The dispute centres round the employment of women and non-apprenticed male workers, and Edinburgh has fallen into line with Glasgow. There is no question of the victimisation of the women at present employed, as the men's memorial states that the proposals "shall not affect any worker, male or female, employed previous to November 1st, 1913."

The dispute since our last issue has made no progress towards a settlement. A meeting of the Glasgow masters has been held, at which it was reported that the demands of the men had not been conceded by any large employer.

Mr. Alexander Dempster, secretary of the Glasgow Branch of the Union, states that the practices which it is sought to discourage are by no means general, but are confined to a few firms. The Union, he states, are anxious to frustrate the exploitation of female labour, and contend that in cases in which female workers do the same work as males they should be paid the same wage, and not, as at present, one-third of the wage paid to males. They are merely seeking to get uniformity of custom, which, generally speaking, exists to a greater extent in England and Ireland than in Scotland.

According to the latest issue of the *Trade Circular* of the National Union of Bookbinders and Machine Rulers, the consolidated balance of the union is £7,897 4s. 9d., and the superannuation balance £3,351 2s. 10d.—a total of £11,248 7s. 7d., which works out at the average of £1 11s. 6d. per "clear" member.

An Edinburgh firm which is not affected is that of Messrs. Nelson and Son, who are not in the Alliance of Masters. The employees of Messrs. W. and A. K. Johnston and one or two other firms, numbering with those of Messrs. Nelson about 100, are not involved in the dispute. It is stated that in the event of the employers engaging non-union labour when the men are all out the federated trades—the typographical, lithographic, stereotyping, and cutting—may throw in their lot with the bookbinders.

The employees of Messrs. Blackie and Son, Ltd., Glasgow, will be the first to cease work, the number being about 70. The other members of the men's organisation will stop at the end of this week, with the exception of the men employed by Messrs. M'Corquodale and Co., Glasgow, whose notices do not expire until Thursday of next week. There are about 75 men in Glasgow who will not be affected by the strike, as their employers have granted the terms demanded. Of this number 22 are in the employment of the Scottish Co-operative Wholesale Society.

Machine Rulers, Bookbinders, Printers, and Kindred Trades Overseers' Association.

(Special to the *British and Colonial Printer and Stationer.*)

The monthly general meeting of the members of the Machine Rulers, Bookbinders, Printers and Kindred Trades Overseers' Association was held on Tuesday evening, at the headquarters, "The Ship," Newgate-street, E.C. There was a good attendance, and the chair was occupied by Mr. J. Dixon (president), supported by Mr. J. Walker (vice-president) and Mr. Geo. A. Eden (secretary).

The minutes of the last general meeting were read, after which the correspondence bearing on Association matters was submitted.

New Members.

The Association considered applications from persons eligible for membership. These were fully gone into and the following elections were announced:—Honorary members: Mr. S. G. Hobbs (manager, publishing department, Messrs. W. H. Smith, 186, Strand, W.C.), and Mr. T. Turner (Messrs. Turner and Co., Commercial-street, E.C.). Members: Mr. W. C. Laurence (of Messrs. Wilkinson Bros., Green-lane, N.); Mr. R. Gardner (of Messrs. Poulter and Sons, Rupert-street, E.C.); Mr. Cleasby (of Messrs. J. M. Dent's, Letchworth); Mr. F. Jordan (of Messrs. Bemrose and Sons, Derby); Mr. W. V. Francis (of publishing department, Messrs. Bemrose and Sons, Derby).

The President said he could assure the newly-elected members that they would find in the Association some very good friends. It was very nice—at least he found it out, and he was sure other members had the same experience—to be in touch with the various classes of members they had in the Association, not only for business reasons, but for social and other objects. Outside the "shop" the new members would find that the Association extended to them the hand of friendship, and members were expected to do their level best to help one another in time of trouble and distress. He hoped the new members would never regret the day they joined the Association, and in coming amongst them they were given a very hearty welcome. (Applause.)

When other business had been transacted, Mr. J. Walker read a short paper on.

Robert Burns, the Poet.

Needless to say, a more genial personage could not be seclected to expound the qualities of "Rabby" than Mr. Walker, who hails from north of the Tweed. He said he thought it highly expedient that he should preface his paper with a few remarks concerning the subject under consideration. Firstly, the effort was an education to those who had only heard the name of Robert Burns; secondly, while not pretending to extol Burns' virtues—because, he believed, he had many—nor yet seeking to minimise his failings—because no man was perfect—he wished to put before the Association, as well as it was possible, his character as a man. There were many conflicting opinions relating to Burns' life, and if he (Mr. Walker) could only make the members of the Association think that Scotsmen did not over-estimate what Burns had done for mankind in general—and Scotland in particular—he would be happy in his efforts to entertain the Association that evening. He reminded them that there were two nights in the year very dear to Scotsmen in whatever part of the world they might chance to be, viz., St. Andrew's night in November, and the poet's birthday on January 25th. He thought he was right in saying that January 25th was the most popular of the two. That was the night when Scotsmen the world over remembered the grand idea propounded by the National Bard, "That man to man the world o'er, should brithers be for a' that." That was the night when revelry was heard, and when mirth and merriment were carried into the sma' hours. Mr. Walker followed on with an historical sketch of "Rabby," and interspersed his instructive paper by quotations from some of the bard's best poems, which were given in the true Scotch dialect. At the conclusion of the paper,

Mr. A. W. Hunt expressed the appreciation of the members to their worthy friend Mr. Walker for his paper, and referred to the spirit of brotherhood that had always existed all the world over among Scotsmen. If Englishmen expressed it a little more than they did, he thought it would make them as well beloved as the Scotsmen. He was only sorry that the paper was not longer. (Applause.)

Mr. G. Logan said he enjoyed the paper thoroughly.

Mr. Ibbot also expressed his appreciation.

Mr. J. Lee said he thought Burns' was a politician throughout—in fact he could not see how Burns' could be separated from the political element.

Mr. Geo. Pavier said he could speak from experience and bear out what Mr. Walker had written, that the spirit of brotherliness so prominent in Scotsmen was conspicuous by its absence—particularly in London—amongst Englishmen.

Mr. Peacock promised that when he was perfect in the Scotch dialect he would give a paper on Bobby Burns—and not on Johnny Burns. (Laughter.) He congratulated Mr. Walker.

Mr. Walker having replied, the meeting ended.

A System Explanation.—"Don't tell me you can't remember things!" murmured Jobbs to Dobbs. "Memory is all a matter of system. Now, in what year was the battle of Agincourt fought?" Dobbs pleaded that his memory failed him on that interesting historical feat. "Exactly!" replied Jobbs. "Now, how many days are there in a week?" "Seven," came the answer. "Very well. Twice seven are fourteen. Multiply by a hundred—fourteen hundred. Number of days in June, thirty. Half of thirty, fifteen. Fifteen and fourteen hundred?" "Fourteen hundred and fifteen," hazarded Dobbs. "Right! That's the year of the battle. System, my boy. That's what does it—system!"—*Exchange.*

The Scottish Bookbinders.

IT, unfortunately, seems inevitable that the Scottish bookbinders, not having their demands complied with by the employers, will carry the dispute to the arbitrament of a strike. The question of female labour is the cause of the disagreement between masters and men, the men claiming the exclusion of female and of non-apprenticed male labour from the bookbinding and paper-ruling trade, except as to one or two auxiliary processes. The employers are not prepared to submit to these restrictions, which, they maintain, would have the twofold effect of hampering the development of the trade, and excluding women from many branches of it which they have hitherto worked at successfully. In Edinburgh and Glasgow there are nearly 800 men employed in bookbinding, and in some of the smaller towns where binding is carried on nearly a hundred more will be affected. Strike notices have already been handed in, and the majority of these expire next week, when there will be close on one thousand men idle. So far there is no indication of the employers conceding the demands of the men; they point out that if the demands are granted, over 800 female workers would be displaced, and the trade hampered for labour, and while willing to redress any genuine grievances, they are not yet prepared to exclude female workers from their binding shops, where they have for so long worked successfully. The men's Union leaders say that there is no question as to the victimisation of any female workers at present employed, as their demand expressly states that the proposals "shall not affect any worker, male or female, employed previously to November 1st, 1913," but only provides that no new women workers shall be employed unless paid at the same rate as the men working at similar work. That such a dispute should have arisen in a section of the trade that has been comparatively free from labour disturbances is to be regretted, and we trust that a satisfactory settlement will be arrived at, even if it causes a sacrifice on both sides. Strikes are disastrous alike to masters and men, and every effort should be made to avoid such a final arbitrament.

* * *

Demoralising Literature.

WE have heard a good deal lately about demoralising literature in the form of books, magazine articles and too full newspaper reports of unsavoury cases. In the matter of books the principal libraries have taken action to prevent their circulation, with the effect of increasing their sale to private individuals, for as soon as a book is censored as unfit for general reading there is a rush on the part of a very large section of the public to purchase it. Magazines and newspapers are more difficult to deal with, their contents are varied, and amid much that is good it is but seldom that their contents include matter that can be called demoralising, although there is an extreme section of the public that would attempt to censor even the mildest reports of divorce and kindred proceedings, and any article or sketches that in any way alluded to the sex question. With a view to discussing the control of reports and literature of a demoralising tendency a conference of publishers, editors, newsagents, librarians, etc., met in the Guildhall, London, on Monday afternoon, and listened to the speeches by bishops and others on the subject. It was stated that the Government had received favourably suggestions for legislation on the matter, and a Government measure was now in preparation which would have the effect of producing greater stringency regarding publications which might be looked upon as objectionable. There was, said one speaker, a good deal of literature circulating in the world, and also a great many public posters that offended against good taste, and it was the duty of those who had public interests at heart to try to minimise conditions which they thought evil. Another speaker said the books which did most harm were the books which suggested and not the books which dealt directly with difficult problems of morals. He held that State control should be used only when everything else had failed. Considerable discussion took place at the meeting, but no formal resolutions were passed. There is a considerable element of danger in such endeavours at suppression, and if legislation takes place a very great deal will depend on those who are appointed as censors. Some minds can detect evil where none exists, and it will be a bad day for the printer, newspaper proprietor, and artist when their work has to be submitted to men whose puritanical proclivities may unfit them to be fair judges.

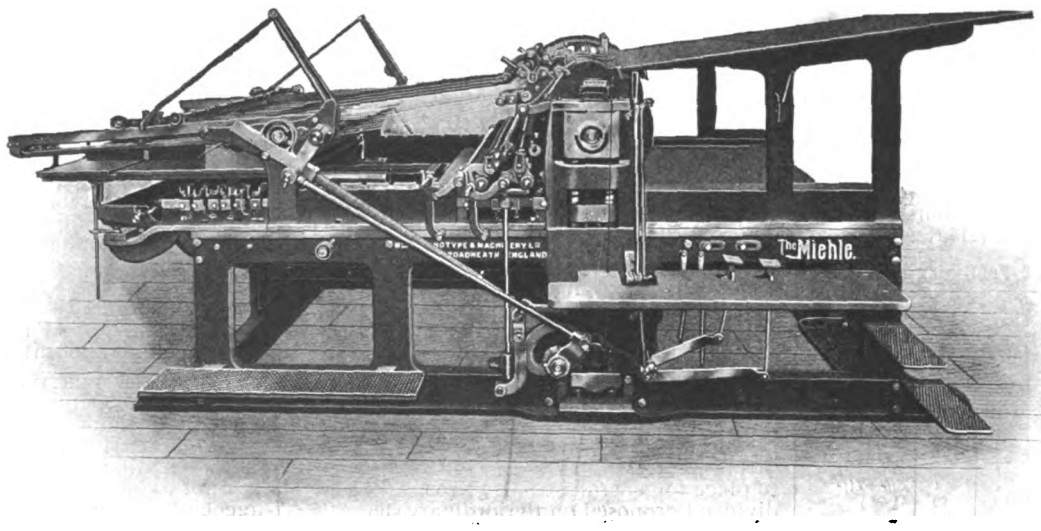
* * *

The Australian Customs Tariff.

THE Board of Trade have issued a communication stating they are informed by His Majesty's Trade Commissioner in Australia that a Commission has now been appointed with wide powers to investigate, amongst other matters, "the effect and operation of any Tariff Act or other legislation of the Commonwealth in regard to revenue, Australian manufactures, and industry, and trade generally." The Commission will be prepared to consider evidence at an early date with regard to the operation of the tariff and the

Digitized by Google

preference accorded to British manufactures. It is accordingly recommended that British firms having representatives in Australia should at once communicate with these representatives if there are any matters that they may wish to submit for the consideration of the Commission. His Majesty's Trade Commissioner will be ready to render whatever assistance he properly can in connection with the matter. It has been ascertained that the Commission will be prepared also to consider the sworn affidavits of British firms who are not represented locally. Any such affidavits should be forwarded to H.M. Trade Commissioner, Melbourne, either directly or through the Board of Trade. It is understood that the Commission are likely to attach more importance to representations from individual firms affecting their particular business than to general representations from trade associations or Chambers of Commerce.



The Newsvendors' Dinner.

Sir George Riddell presided at the annual dinner of the Newsvendors' Institution, held on Monday night at De Keyser's Hotel, and in proposing the toast of the evening said that the shade of the great novelist could look down upon a gathering composed of newspaper proprietors, editors, and managers, wholesale agents, publishers, novelists, and poets. Amongst the company at the high table were the Hon. Harry Lawson, M.P., and Mrs. Lawson, Sir Horace and Lady Marshall, Mrs. Marie Belloc Lowndes, Sir W. Robertson Nicoll, "Annie Swan," Sir Frank Newnes, Mr. T. Marlowe, Mr. Arthur Spurgeon, Mr. Robert Donald, Mr. Ernest Parke and Mr. Charles Garvice. The newsagent of to-day, Sir George added, was no ordinary tradesman. His shop was the district terminal of a thousand wires that brought news from all over the world. He circulated daily, in the shape of leading articles, more wisdom than Solomon ever wrote. Every month the newsagents distributed over 300 million periodicals, magazines, and newspapers, contributing largely to the happiness of the community. Their Institution investigated every case of distress that came to its notice, and, whether the applicant was a member or not, granted relief as far as their funds would permit.

The Organising Secretary of the Costing Committee is having a busy time this week in Staffordshire. On Monday last he attended a meeting at Leek, when, after a discussion as to how conditions in the printing trade in that district might be improved, it was decided to form a branch of the North Staffordshire Master Printers' Association, and Mr. Hindley was appointed secretary. The majority of printers in the district were present and agreed to join, and several present stated they had introduced the Federation Cost System and found it a great help to them.

The Miehle
TRADE MARK

IS PRODUCING THE FINEST COLOUR, BOOK, AND JOBBING PRINTING THROUGHOUT THE UNITED KINGDOM AND COLONIES.

In half-tone work, the Miehle reproduces every gradation of tone contained in the blocks—from soft high-lights to heavy solids.

Its reputation for perfect colour printing (which includes efficient rolling power and the features which make for dead register) is embraced by the standard phrase "Miehle Quality," which means essentially Miehle printing.

The Miehle is fitted with two deliveries, which at will deliver the product printed side up or printed side down.

The inking equipment provided on this press consists of sixteen rollers and a large ink table; of these, four are forme rollers with reciprocating riders and rollers over them (nine in all, arranged in pyramid form). The other seven rollers distribute the ink on the table before it reaches the forme rollers.

This press is built in six sizes; the smallest size takes a sheet up to 26-in. by 39½-in. and the largest size 46-in. by 66-in.

Miehle presses are also supplied in tandem, so arranged that the units may be disconnected and used as single machines.

The Miehle is Manufactured and Sold by

LINOTYPE AND MACHINERY LIMITED

who have the sole and exclusive right to manufacture and sell The Miehle in the United Kingdom and Colonies (except Canada).

Offices of the *British and Colonial Printer and Stationer*,
58, SHOE LANE, LONDON, E.C.
WEDNESDAY, Nov. 5th, 1913.

CREDIT was in insufficient supply to meet the demands down to the end of last week, and considerable business was done at the Bank of England in loans and discounts, but a marked falling off in the demand showed itself on Saturday, and on Monday loanable funds were considerably augmented. Loan rates have been easier, while discount rates are firm. Bullion movements this week have resulted in a net influx to date of £241,000. About £800,000 was available in the open market on Tuesday, of which trade requirements will absorb £150,000, and the Bank will probably secure the balance. The Mexican outlook continues to depress stock markets, and the general tone is very uncertain. Business continues dull, and prices are weak. Consols are lower, the quotations being 72 1/8 to 72 1/16 for money, and 72 3/16 to 72 1/8 for the account.

The general tendency in the miscellaneous industrial market has been adversely affected by the depressed conditions in other departments, and business is on a very restricted scale. There have only been two movements in our list of shares this week, Ilford Pref. falling 1/32 to 1/8—1 xd., and Waterlow Bros. and Layton rising 1/4 to 6—7. Business has been done during the past seven days in Amalgamated Press Pref. at acc. 21s., 20s. 6d., 20s. 9d., and 20s. 3d. xd.; in Associated Newspapers Pref. at acc. 20s. 9d. and 20s. 3d; in Cassell and Co. at acc. 97s. 6d.; in Ilford Ord. at 13s. 9d., and in the Pref. at acc. 18s. 3d. and 18s. xd.; in *Illustrated London News* and *Sketch* Pref. at 13s. 9d., and in the Ord. at 3s. 3d.; in International Linotype at 70 1/4 and 70 5/8; in Kelly's Directories Pref. at 9 3/4; in *Lady's Pictorial* and *Sporting and Dramatic* Publishing Pref. at 51s. 3d. xd.; in Linotype and Machinery A Deb. at acc. 55, 53, and 52; in Edward Lloyd Pref. at 21s. 3d.; in George Newnes Pref. at acc. 16s. 9d., 16s. 6d., 17s., 16s. 6d. and 16s. 3d.; in Raphael Tuck and Sons Ord. at 18s.; in Waterlow Bros. and Layton Ord. at 6 3/4; in Waterlow and Sons Def. Ord. at acc. 28; in Weldons Ord. at 31s. 3d. and 30s., and in the Pref. at 20s.

DIVIDENDS AND REPORTS.

"LADY'S PICTORIAL" AND "SPORTING AND DRAMATIC" PUBLISHING CO.—Profit £16,300. Dividend at the rate of 2 1/2 per cent. per annum on the ordinary shares, making a total dividend for the year of 3 per cent., and to carry forward £2,374.

CO-OPERATIVE PRINTING SOCIETY.—The half-yearly meetings of the Co-operative Printing Society, Ltd., of Manchester, Newcastle-on-Tyne and London, were held at the two latter places on Saturday and will be concluded at Manchester on the 8th inst. The work done at the three branches for the past half-year was reported as follows:—Manchester, sales £21,213, stock-in-trade £3,014, and work in progress £1,203, a total of £25,431; Newcastle-on-Tyne, sales £9,746, stock-in-trade £2,045, work in progress £1,200, a total of £12,992; London, sales £27,362, stock-in-trade £1,430, work in progress £2,060, a total of £30,853. The total profit was £6,653, for which share capital had a dividend of 5 per cent. and a bonus of 2 1/2 per cent., £776 was given as dividend on trade and £456 as bonus on wages, benevolent funds, and special depreciation being credited with the remainder. At the annual dinner of the employees at the London branch at the Holborn Restaurant on Saturday night, Mr. A. W. Tyler, the manager, presided, and was supported by Mr. C. W. Bowerman, M.P., who, in the course of a speech of congratulation, declared that the conditions of employment at the Society's three establishments were among the best in the printing trade.

MERGENTHALER LINOTYPE.—The report of Mergenthaler Linotype Co. for the year ended September 30th last states that the net gain for the year is $2,767,936, the amount being somewhat larger than that of the preceding year and the largest in the past five years. The number of machines built during the year was the largest in any one year of the company's life. There are now in existence in various parts of the world approximately 30,000 Linotype machines. The Brooklyn works have been extended and improved, and now contain 343,000 square feet of floor space, almost entirely of the latest fire-proof construction; the tool equipment has been enlarged and modernised and many new tools produced, all with a view to securing economy in production, excellence in workmanship, and healthful conditions for the workmen. During the year an insurance system was established under which all the factory employees have their lives insured for the benefit of their families for an amount equal to one year's pay, not exceeding $1,500, wholly at the expense of the company. The operations of the German company for the year have been very satisfactory, and those of the English company somewhat better than in the previous year. The value of the Canadian business has increased during the year, largely because of the removal of the Canadian duty.

"IRISH TIMES."—The report for the year ended September states that the profit was £32,921, plus £5,774 brought forward. The directors have written off as depreciation on premises, plant, machinery, furniture and fittings, horses and vans, £2,018, and propose to place to general reserve £1,000. The final dividend proposed on the ordinary shares is 5 per cent., making 10 per cent. for the year, and £6,582 is carried forward.

"LONDON OPINION."—An interim dividend of 200 per cent. has been declared for the half-year ended September, being the same as for the corresponding period of last year.

NEW COMPANIES.

J. T. BOOTH, LTD.—Registered on October 24th, with a capital of £2,000, in 1,000 ordinary shares of £1 each and 500 cumulative preference shares of £2 each, to take over the business of J. T. M. Booth carried on by him at Electric Printing Works, High-street, Heckmondwike, as "J. T. Booth," as a printer, publisher, bookbinder, engraver, lithographer and manufacturing stationer. The subscribers are J. T. M. Booth, Mrs. E. A. Jubb and C. Blackburn. Private company. The number of directors is not to be less than two nor more than five; the first are J. T. M. Booth (permanent managing director), Mrs. E. A. Jubb and C. Blackburn. Qualification, 25 preference or ordinary shares. Registered office, Electric Printing Works, High-street, Heckmondwike.

JAMES WATSON AND SONS (PRINTERS), LTD.—Registered on October 24th, with a capital of £4,000, in £1 shares (3,850 preference), to take over the business carried on in Manchester, as "James Watson and Sons," to carry on the business of printers, stationers, lithographers, typefounders, stereotypers, photographic printers, engravers, etc., and to adopt an agreement with J. Watson and J. H. Watson. The subscribers are R. F. Harker, J. Watson, J. H. Watson and E. W. Davis. Private company. The number of directors is not to be less than two nor more than five; the first are R. F. Harker (chairman), J. Watson, J. H. Watson and E. W. Davis.

Intaglio Patents, Ltd.—Particulars of £8,000 debentures, with bonus of 10 per cent., created April 23rd, 1913, filed pursuant to Section 93 (3) of the Companies (Consolidation) Act, 1908; the amount of the present issue being £4,765. Property charged—the company's undertaking and property, present and future, including uncalled capital. No trustees.

COMPANY NOTICES.

MARRIOTT and STEWART, Ltd.

Notice is given, that a meeting of the company will be held at 6, Holborn-viaduct, E.C., on December 5th, for the purpose of having the liquidator's accounts, showing the manner in which the winding-up has been conducted and the property of the company disposed of, laid before the meeting, and of hearing any explanation that may be given by the liquidator.

"BEDFORDSHIRE STANDARD" NEWSPAPER CO., Limited.

At a meeting of the company, held at Bedford, on October 10th, the following resolutions were passed; and at a subsequent meeting, on October 28th, were duly confirmed: —"That the company be wound up voluntarily under the provisions of the Companies (Consolidation) Act, 1908." "That Mr. G. C. Walker be appointed liquidator for the purpose of the winding-up at a remuneration to be hereafter fixed by the directors of the new company."

COMMERCIAL INTELLIGENCE.

Re CHARLES J. FORWARD and SON, Ltd. Wholesale Bookbinders, etc.

The creditors and shareholders of this company (in liquidation) met last week at the Board of Trade Offices, Carey-street, W.C., to elect a liquidator and committee of inspection under the compulsory winding-up order recently made against the company, which carried on business at 27, Sayer-street, New Kent-road, and 6, Blackfriars-road, S.E., also at Hatfield-street, E.C. Mr. W. J. Warley, official receiver, presided. The company was formed in May, 1898, to acquire and carry on the wholesale bookbinders' and fancy leather case makers' business established by Mr. J. Forward in 1852, and then being carried on at 6, Blackfriars-road, S.E. Debentures were issued in part payment of the purchase-money, and as security for loans obtained for Mr. C. W. Forward, the vendor and managing director. At the date of the winding-up order, £3,375 was due in respect of the debenture bonds and interest, and Mr. C. H. Dommes, I.A., was in possession of the business on behalf of the bondholder. The failure of the company is attributed to loss in trading, heavy establishment expenses, increased cost of labour and materials, and to the reduced prices charged by the company through competition. Mr. Naylor, on behalf of the trade creditor, moved that Mr. Harry Wingfield (Fairbourn, Wingfield and Co.), C.A., 67, Watling-street, E.C., should act as liquidator. The motion was opposed by Mr. Forward, but on a vote being taken the chairman declared it to be carried by a large majority both in number and value. A committee of inspection was next chosen, and Mr. Forward was nominated as a member thereof. Mr. Naylor objected to the nomination on the ground that Mr. Wingfield would have to determine upon the respective right to Mr. Forward as the debenture holder, and upon those of the creditors. The official receiver observed that as the matter now stood, and assuming that the debentures were in order, they would absorb all the assets, and there would be no margin for the unsecured creditors. A discussion ensued, but eventually Mr. Naylor withdrew his objection and the following committee were elected, viz.:—Mr. T. O. Hart, Mr. S. T. Gardner, Mr. John Bowstead and Mr. Chas. Walter Forward.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

DISTRIBUTION OF ASSETS.

RATTENBURY, W. S., late of 18, Morice-square, Devonport, retired printer. Claims by December 13th, to Goldsmith and Peck, 26, Ker-street, Devonport, solicitors for the executors.

THE BANKRUPTCY ACTS, 1883 AND 1890. RECEIVING ORDER.

SMITH, F. G., High-street, Broadstairs, Kent, stationer, etc. Date of order and of adjudication order, October 25th, made on the debtor's own petition.

NOTICE OF INTENDED DIVIDEND.

TATCHELL, C. J., 171-172, Snargate-street, Dover, stationer, etc. Claims by November 19th, to J. O. Morris, official receiver, 68a, Castle-street, Canterbury. Date of order of discharge, October 7th, subject to the following condition to be fulfilled before his discharge takes effect, viz.:—He shall, before the signing of this order, consent to judgment being entered against him in the County Court of Kent holden at Canterbury, by the official receiver, for the sum of £50, being part of the balance of the debts provable in the bankruptcy which is not satisfied at the date of the order. The grounds named in the order for refusing an absolute order of discharge were proofs of facts (A.) and (B) under sub-sec. 3 of sec. 8 of the Bankruptcy Act, 1890.

NOTICES OF RELEASE OF TRUSTEES.

CHARLEY, F. H., lately of 31, Hilldrop-crescent, Holloway, London, N., journalist. Trustee, E. L. Hough, official receiver, Bankruptcy-buildings, Carey-street, W.C. Released September 25th.

BLIGH, W. H., Caxton Home Works, Broad-street, Ramsgate, printer. Trustee, J. O. Morris, official receiver, 68a, Castle-street, Canterbury. Released September 29th.

THE COMPANIES ACTS, 1890 AND 1908. NOTICE OF APPOINTMENT OF LIQUIDATOR.

THE "DAILY HERALD" PRINTING AND PUBLISHING SOCIETY, Ltd., Victoria House, Tudor-street, London, E.C. Liquidator, H. W. Head (with a committee of inspection), Queen Anne's-chambers, 41, Tothill-street, S.W. Appointed October 20th.

NOTICE OF RELEASE OF LIQUIDATOR.

THE TWENTIETH CENTURY PRESS, Ltd, 37A, Clerkenwell-green, London, E.C. Liquidator, H. V. Brougham, senior official receiver and liquidator, 33, Carey-street, Lincoln's-inn, W.C. Released October 24th.

O.B. Dramatic & Musical Society.

An enjoyable two hours' entertainment was provided at the Cripplegate Theatre, Golden-lane, E.C., on Monday evening, by the O.B. Dramatic and Musical Society, which is entirely composed of members of the two London houses of the firm of John Dickinson and Co., Ltd., Old Bailey, and Upper Thames-street. The piece chosen for dramatic representation this time was a more modern one than hitherto—James H. Darnley's farcical comedy, "Facing the Music," which was most creditably presented by a caste of nine characters, notwithstanding some re-arrangement of the characters caused by an important absentee. The plot of the piece turns on the humorous and most awkward situations caused by two families, both John Smith by name, occupying neighbouring flats, and the young wife of one, returning from a journey during the absence of the other lady, mistaking her neighbour's for her own new flat, and causing extraordinary confusion all round, in which a fussy duffer of a detective, Sergeant Duffell, makes confusion worse confounded. All the characters were so well sustained that it would be invidious to single out any for special mention. The cordial reception the piece gained from a crowded audience was well merited, and adds a further triumph to a growing list of successful performances.

The following was the caste:—

Rev. John Smith (The Curate of St. Andrew's)	Mr. Albert A. Peart
John Smith (The other Mr. Smith)	Mr. V. Hornby Merry
Dick Desmond (The other Mr. Smith's Guest)	Mr. Charles R. Gill
Colonel Duncan Smith (The other Mr. Smith's Uncle)	Mr. E. Hawtrey Plested
Sergeant Duffell (Attached to Vine-street Police Station)	Mr. Reginald E. T. Bell
Mabel (The Curate's Wife)	Miss Dorothy Flanders
Nora (The other Mr. Smith's Wife)	Miss Mabel Wagstaff
Miss Fotheringay (Of the Bijou Theatre)	Miss Edith Craik
Mrs. Ponting (The other Mr. Smith's Housekeeper)	Miss Hilda M. West

Scene:

The Other Mr. Smith's Flat, No. 19, Mona Mansions Kensington.

Act I.	Before breakfast	10 o'clock.
Act II.	After breakfast (same morning)	10.40 o'clock.
Act III.	Before lunch (same morning)	11.30 o'clock.

The efforts of the dramatic performers were ably supported by an excellent orchestra, under the direction of Mr. Ernest A. Dupé, which rendered the accompanying selections:—

March, "The Uhlan's Call"	K. Eilenberg
Overture, "Esmeralda"	H. Hermann
Entr'acte, "Das Herz"	W. Vanderwell
Intermezzo, "Secrets"	C. Ancliffe
Idylle, "Salut d'Amour"	E. Elgar
Waltz, "Les Sourires"	E. Waldteufel

Is it Natural for Printers.

To say the "other fellow" cut the price when you lose the job.

To blame the ink man when the job doesn't look right.

To have something else very important "on the string" when you should attend the Typothetæ meeting.

To tell the customer "the proof is on the way."

To hear the paper house tell you, "It's on the waggon—left here two hours ago.

To see the bindery girls doing the "powder act" by the mirror and charging it as Productive Bindery "C."

To always think you are right, and feel sorry for the ignorance of the other printer.

For the collector to return with all bills marked "Out, call again."

To let the printing buyer set the price for his printing, by "shopping," and playing you against your competitors.

To believe all the bad things you hear about the other men in the business, instead of putting it up to them frankly.—*Typothetæ Bulletin.*

U.K. Imports of Japanese Paper.

Imports of paper from Japan into this country were as under during the periods mentioned:—

	Total Imports.	Retained in U.K.
1912	£31,532	£25,746
1911	38,429	32,980
1910	33,825	28,796
1909	25,229	19,088
1908	37,315	32,975

Of the goods retained in the United Kingdom the following are classified:—

Printings and Writings.

1912	3,331 cwts.	£20,182
1911	3,571 ,,	23,985
1910	2,771 ,,	19,698
1909	2,288 ,,	16,054
1908	3,925 ,,	24,175

Printed Paper.

1912	574 cwts.	£1,769
1911	754 ,,	3,620
1910	819 ,,	3,135

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help a-d an ornament thereunto."
FRANCIS BACON, Baron Verulam.

I have had several instances brought to me lately of the long time during which some employees may work on happily in the printing world. One of the most interesting is the case of Mr. William Bull, who has put in sixty years' service with the firm of J M. Kronheim and Co., colour printers, now of Tottenham Hale, London; but who were first established in 1846 at Paternoster-row, E.C.

o o o

There have been some congratulations and confabulations at Tottenham Hale of late, for the firm is naturally not a little proud of its own long record, and of the fact that it has been able to retain the hearty services of one and another through the decades.

o o o

I do not want to detract anything from the possibly unique character of Mr. Bull's record, in that connection, but I have a recollection that when once visiting Kronheim's, another old friend was pointed out to me whose coming to the firm was an event of a misty past, as to which all that could be said was that it was anywhere you liked from fifty to sixty years ago. It is some time since I heard this story. I don't know if that worthy old servant is still alive and still in harness. I do know that he was very considerately treated during his working hours.

o o o

There is nothing misty in Mr. Bull's case. It is definite that he joined the firm in November, 1853. At that time Kronheim's removed to their large works in Shoe-lane. They were then, as they have remained, a very notable house in the printing world. They were perhaps the best known, I certainly believe they were by far the most prolific and successful, of the licensees of George Baxter's beautiful colour printing.

o o o

Mr. Bull had extensive experience in the handling of Baxter colour prints, and well remembers the period when machine lithography was introduced, involving the gradual decline of Baxter work.

o o o

Mr. Bull made good headway at Kronheim's. For many years he has had control of the cutting, finishing and forwarding departments. He has been blessed with a fine memory. The way he can give the smallest details regarding jobs which were first done many years ago is little short of marvellous.

o o o

Mr. F. W. Seeley, the manager of Kronheim's, declares that a chat with Mr. Bull is a liberal education to anyone interested in printing; and for Mr. Seeley to say that, is in itself remarkable. Not to be sure that he grudges recognition, for I know his magnanimity, at all times. But the fact is, he is himself so widely informed in the technique of the craft and its general affairs, that if Mr. Bull has been able to give points to Mr. Seeley, he has most certainly every right to plume himself upon his knowledge of the craft.

o o o

But there has been more in Mr. Bull than mere craft and specialist knowledge, valuable and essential as of course that is.

o o o

Mr. Bull is a man who, for all the intentness of his work in Kronheim's business, has yet managed to keep well abreast of the general literature of his time.

o o o

He is so well read a man that there is a charm in discussing with him almost any subject that may arise.

o o o

His sixtieth anniversary was very pleasantly marked by a friendly gathering at the works and a present was made to him. I believe it took the form of a purse, whose contents it was thought he would best know how to apply so as to embody in a tangible form a memento and assurance of the general good will, while at the same time gratifying some strong desire, or even, if he liked to call it so, some weak desire of his own.

o o o

We have all our little weaknesses or penchants which ordinarily we hardly feel justified in gratifying; but occasions of this sort come along when a little out-of-the-way expenditure becomes more than legitimate. I hope and I don't doubt that Mr. Bull will exercise that happy freedom in the use he makes of the gift.

o o o

Here's to him; honour for his long service and honour for the good name he has so obviously won. May he find that the best is yet to be.

o o o

I think too much is said and written and too little is thought regarding the beautiful, the mutually solicitous regard, of the old-time individual employer and his faithful servant. I can't see that it existed to any great extent.

o o o

To be sure, Dickens did meet up Manchester way two men whom he afterwards perpetuated for us as the brothers Cheeryble.

o o o

But take note first that such fatherly or brotherly interest as they seemed to have in their employees quite startled Dickens.

It was something worth noting; worth giving forth to the world in a book as an example. It was not an every-day spectacle but a phenomenon.

o o o

Dickens worked in the thirties for a manufacturer of blacking by Hungerford Stairs, on the Thames-side; and a very little more wretchedness than he then experienced would have made the child throw himself into that river.

o o o

He never could bear to speak or think of that time even when he became a prosperous and famous man. His intimates, too, never dared to speak of it to him.

o o o

There is no hint of any kind word to the child by that employer.

o o o

What a golden chance he missed!

o o o

Take note, too, that the Cheerybles were depicted by an artist in words, and a licensed and legitimate exaggerator.

o o o

There is no reason too in the mere form of things why we should not encounter Cheeryble, Ltd.—even in these days when we have limited companies everywhere. The Cheerybles of to-day, or the men who might be Cheerybles, know more and think more, and are possibly more human than the employers of fifty to a hundred-and-fifty years ago, who, it seems to me, were upon the whole, at any rate the larger employers among them, among the lowest types this country has ever produced, in any grade of life.

o o o

It's true directors don't meet their staffs enough or know them intimately enough. When they meet man to man the great truth becomes clear which Sam Slick expressed in his philosophy that "there's a wonderful lot of human natur in mankind." Human nature hasn't changed greatly.

o o o

Years ago I was on the staff of a London electrotyping house, and now speaking from a distance of many years and from "greater freedom and less responsibility," I will simply say that the "impersonal" board of directors in my house dealt with an old servant, and one who had been well paid too, with a largeness of heart and mind which quite paralleled anything attributed in fiction to the Cheerybles. And no Dickens came along to note the incident. Nor was it a good time in electrotyping just then; very far from it indeed.

FRANK COLEBROOK.

We understand that the master printers of the Hartlepools have conceded an increase of 2s. per week on the minimum wage paid to jobbing compositors, machine-minders, bookbinders, machine rulers, etc. This settlement, it is stated, accords generally with those made in a number of northern towns.

The Trade Journal.

Elbert Hubbard, the American printer, sometimes called the East Aurora philosopher, who turns out beautiful and original work from his Roycroft Press, has been letting himself go on the subject of the trade paper in an article in the *Inland Stationer*, from which we extract the following:—

"If the latest isn't out yet—keep a weather eye peeled on yer trade journal, my hearty!

"The man who knows is the man who goes—up in the world of dollars and sense—in the estimation of others and in his own. He reads his specialised journal.

"Trade journals are the heralds of industry and prosperity. They are the radicals in the convention of progress. They are experimenters, builders, systematisers, organisers, pioneers, in their own particular fields—

"They are the consecrators and conservators. They are the cats that pull the chestnuts out of the fire—for our delectation. So there!

"They are the Courts of Last Conjecture. They know! It is their business to know—that is why they exist. And we learn all we know from them. For journals are nothing but crystallised fact—predigested food of Experience. You may apply the sauce of disbelief *ad liberatum*. I always take mine dry. Waiter, a White Rock, if you please. And Experience is the Universal Educator.

"Trade, Class and Technical Journals make it a business to tell the Truth. They do not deal in hearsay, rumour, misinformation or hypocrisy. Life is too short, and they know it. They taboo the nebulous. They omit the intangible. They venture to verify and verily—they do.

"They give a man courage, animation, ambition. They are not published for mummies.

"If you would savvy of the new wrinkles in your business or profession; if you would know how other folks are progressing, thinking, what methods they employ to achieve their ends—and how to improve your condition and position—if you would converse with the men who are headliners in your field, who have already made good, but who are still discontented, still striving, hoping, aspiring to greater things, and who have worked out their own salvation—if you would continue to be such a man yourself—read your Specialised Journal!

"The man who refuses to get out of his shell is a Lobster—And who wants to be a Lobster?—Nix on the Miserere Lobscouse. I hear you almost saying to the man behind the procession: 'Quit hibernating! That recluse stuff don't go.'

"Get out and meet the world. Absorb animation, amity, animal-heat, love of work, charitableness, vim, vigour, and vitality. Resolve to do, or die doing. Absorb, like a lusty bull calf, from that big, blessed, beneficent enterprise—The Trade Journal."

CANADA'S
Imports and Exports of Paper.

Statistics issued by the Department of Trade and Commerce show Canada's exports and imports during the twelve months ending June last.

The imports were: Paper and manufactures of paper, total in 1913, $8,671,686, as compared with 1912 total of $6,806,707. Of this $5,919,353 came from the United States, and $1,904,137 from the United Kingdom.

The exports were as follows: Paper, total in 1913, $7,902,433, as compared with 1912 total of $4,080,362; wood blocks for pulp, total in 1913, $7,161,220, as compared with total in 1912 of $5,848,298. Of the exports of paper $5,814,273 was sent to the United States and $521,118 to the United Kingdom.

We are informed that the *Oxford Fortnightly* is henceforth to be published monthly at the Athenæum Press.

The late Mr. Simeon Leadbeater, of Blackpool, newspaper proprietor, for several years associated with the *Dewsbury District News*, has left estate of the value of £1,097.

Stationers' Social Society.

Successful Autumn Dinner.

The seventh annual autumnal dinner of the Stationers' Social Society was held the other evening, in the Throne Room, at the Holborn Restaurant, when the chair was occupied by Mr. W. Börnecke (president). There was a very large attendance, and amongst those present were Mr. John A. Kidd (vice-president), Major Craster, V.D., and Mr. C. D'Oyley Mears (trustees), Mr. J. Atkins (auditor), Mr. E. Bradshaw, A. E. Brown, F. L. Cayzer, W. E. Green, Matthew Henry, P. S. Porteous, Chas. Newell, G. S. Weeks, W. W. Bruce (New Zealand), D. Vale, A. F. Kidd, E. M. Fells, R. V. Bowater, N. V. Bowater, J. H. Henry, Henry Burgess, Fred. Wrigley, G. Kirshaw, J. C. Lake, J. C. Lake, jun., T. Olsen, Henry Ling, E. H. Raynham, Robert K. McKenzie (hon. secretary), and A. E. Mist (hon. assistant-secretary), etc.

A more sociable function in the yearly programme of the Society than the autumn dinner could not be conceived. It is purely an informal affair, and is specially arranged that all men in the paper and stationery trades may have a few hours in each other's company in a convivial way. That object is fully achieved, and to add to its pleasure a nice menu is provided, the following being last Friday's:—

Croute au Pot.
Cream of Hare.

Filleted Turbot Duglere.
Whitebait.

Sweetbreads. Villeroy.

Saddle of Mutton.
Rissolees Potatoes.
Cauliflower au Gratin.

Roast Pheasant with Watercress Salade.

Saxon Pudding.

Strawberry and Vanilla Ice Wafers.

Dessert.

The Throne Room is an ideal meeting place for the Society's dinner, and on Friday night it looked its best with the neatly decorated tables, dressed with chrysanthemums, fruit and garlands of small leafed evergreens.

The Blessing was asked by the president, and after full justice had been done to the menu, Grace was sung by a specially engaged quartette party. When the tables were cleared there was the usual

Toast List.

The President, in submitting the toast of "The King," referred to the hospitality members of foreign nations enjoyed in Great Britain and Ireland, and to the loyalty to His Majesty. "Long live the King for the good of his subjects; long live his Majesty," concluded the President, in asking the company to be upstanding and drink the health of King George V.

The toast was received with musical honours, Mr. Vincent O'Reilly being the soloist.

The health of "The Queen, Queen Alexandra, the Prince of Wales, and other members of the Royal Family," was next proposed by the president, who made a happy allusion to the marriage of Prince Arthur of Connaught and the Duchess of Fife, and said he was sure every member of the Society wished them happiness in their married life.

Musical honours were accorded the toast, amidst much enthusiasm.

In submitting the toast of the evening, "The Stationers' Social Society," the President said he had to bid a hearty welcome to all members and their guests. They had amongst them that night some old members of the paper trade, and he was very glad to see them there and hoped they would have a good time and become strong supporters of the Society. It was a source of great satisfaction to all of them to know that the society continued to grow. They were there that night in record numbers. Seventeen new members had joined the Society, and he felt that as the Society grew older numerically it would become larger and enhance its importance in the trade. The aims of the Society were only social, but he was sure they would all agree in the view that the Society had done a wonderful amount of good in the trade and had assisted in creating good fellowship amongst all its members. (Hear, hear.) He would take that opportunity of referring to the great honour that had been bestowed on one of their vice-presidents, Sir Thomas Vansittart Bowater, the Lord Mayor-elect of the city of London. (Applause.) Sir Vansittart had written expressing his regret at being unable to be present that night. Before sitting down, he thought he should make a passing reference to the conditions of trade. Trade was not as good as it might be, but he did not think it was bad, and as far as he could see, they were likely to see better times in front of them again. "You know," added the president, "we live in such a fast living age that the slow, long swing of the pendulum will not do to-day, the same as it did in the past. In any case, let us hope we will see a revival." He hoped the Society would go on progressing, as it was a Society that everyone connected with the paper trade should belong to. (Applause.)

Mr. Matthew Henry (Messrs. John Henry and Sons) proposed the health of "The Visitors." He said that he was sure they were all pleased to see so many guests that night, and they were greatly indebted to the members who invited the visitors. Now, he was a great believer in advertising, and the members of the Society should always show what a fine body of men they were. He hoped that those visitors who were eligible would next year become members of the Society. (Hear, hear.) There was one other little toast he would like to couple with that of "The Visitors," and that was "The Press." They were very much indebted to their trade papers

Photo, Arthur Watson, London, E.C.

MR. W. BÖRNECKE
(*President*).

for the little notices given to the meetings of the Society and the social gatherings, as they went a long way toward helping the Society in the way of membership. They had members, as the worthy president had said, from the Lord Mayor-elect down to the ordinary footpath traveller, like himself. (Laughter.) They had men who were making paper from 1d. to 2s. 2d. in the pound—("Oh!" and laughter)—and also men who were making wrappers for papers. He hoped the visitors would come and see them again. They had some distinguished ones there that night. One gentleman came all the way from New Zealand—Mr. Bruce, who represents Messrs. Spicer and Sons—and there were other representatives to whom a great many of the poor papermakers like himself—(laughter)—were indebted. He had pleasure in proposing the health of "The Visitors," coupled with the names of Mr. Bruce and Mr. Greaves.

The toast was received with the familiar "They're jolly good fellows."

Mr. Bruce, in reply, said as a visitor from the farthest part of this great Empire, it was very pleasing to him to meet the trade in London, and to see the social side of the stationery trade. He was afraid that out in New Zealand they could not rise to a gathering such as he saw before him that night, but he could assure them that if they could they would gladly do so. If that was the way the Stationers' Social Society greeted visitors, as was his experience that night, he could only say that they must come more often. On behalf of the visitors, he was quite sure he was expressing their sentiments when he said that it was a pleasure to be there that night.

Mr. J. L. Greaves (*Papermaker*) returned thanks on behalf of the "Press."

Mr. F. L. Cayzer proposed the health of "The President." He said that was the last official function of the Society at which their president would take the chair; but he would remind those present of a somewhat non-official function which would take place next month, and that was a Bohemian concert, and as they had well supported the president on this occasion he hoped they would well support him on the next occasion, and also bring their ladies to support Mrs. Börnecke. The Stationers' Social Society, he was glad to say, did not make any distinction in regard to any nation. They were all a great cosmopolitan trade in the great City of London, and they had done honour to others, as well as to Mr. Börnecke,—(applause)—in asking them to be presidents of the Society. They must acknowledge the tact and dignity with which Mr. Börnecke fulfilled the office of president, and they all thanked him for the good that he had done the Society, and they ventured to wish him in the future every happiness and prosperity. He had heard it said that at the end of the president's year of office, when he was admitted to the great position of past-president, that he looked like a curio placed upon the shelf of a museum. Well, the Stationers' Social Society had a good many curios—(laughter)—on the shelf of their museum, and no doubt Mr. Börnecke would add a great deal to that collection. (Laughter.) He would ask them to stand and drink to the health of the President with musical honours.

The toast was most cordially received.

The President, in reply, said he was very thankful to Mr. Cayzer for his kind words, and to those present for the reception accorded the toast. It was, indeed, a great honour to him to preside over the Society, but he did not think he deserved all that Mr. Cayzer had said of him. But they could rely upon it that whatever he did, no matter how little it might have been, he tried to do his best. (Applause.) The president of the Society could do little, because they had a committee of old and trusted members who did the bulk of the work. He must also refer particularly to the services of Mr. McKenzie and the splendid work done by him. If it had not been for the secretary those splendid functions would not pass off so successfully, and in such splendid style. Finally, he would like to thank Mr. Bradshaw for the excellent entertainment he provided. The Society was growing and he hoped the support would grow also. The committee was doing its best and relied upon the general body of members to do their best to raise the membership of the Society and raise its importance. It was an important society already and in future years it would be of greater power in the paper trade. (Applause.)

The Musical Entertainment.

A feature of the dinner—indeed, of all the dinners of the Society—is the musical entertainment. Mr. E. Bradshaw was responsible for this section of the programme and he left nothing undone. Mr. Vincent O'Reilly, an Irish baritone, sang several favourite songs, as also did Mr. Charles Morton. The humorous element was sustained by Miss Roda Loader and Miss Winnie Harbor and Mr. Wilson Martell. Miss Elsie Birkinshaw was a pleasing contralto and her contributions were greatly enjoyed. Miss Lily Gover was also a great success in all her songs. Mr. William E. Manton made an ideal pianist. From start to finish the musical arrangements were extremely popular, and afforded excellent enjoyment.

At a late hour the company separated after singing "Auld Lang Syne."

EMBOSSING.—Mr. G. Moncany has patented a method whereby ornaments and other objects in imitation of engraved or chased metal plates are obtained by embossing a material obtained by glueing together layers of metal foil and paper or paper pulp and then coating the paper side of this with a layer of gold, silver, or copper powder. The material is embossed between a negative metal die obtained by moulding or electrolysis from an original engraved, etc., copper or steel plate, and a positive die obtained from the negative one by pressing against it a layer of cardboard, leather, or preferably a plastic layer composed of sealing-wax, gutta-percha, or the like, spread over a sheet of leather, cardboard, etc. This positive die is preferably coated with a layer of gutta-percha and again pressed against the negative side. The embossed product may be printed in the hollow parts, and may be coated with a transparent material such as collodion, acetate of cellulose, etc.

THE Board of Education announce that the Victoria and Albert Museum will, in future, be open on Sunday afternoons from 2 till 6 p.m. throughout the year, instead of from 2 till 4, 5, 6 or 7, according to season, as hitherto. This arrangement began on Sunday last.

SOME CONTRIBUTIONS TO

Scottish Paper Trade History.

XII.

The last mill we shall notice in connection with the eighteenth century is Dalsholm (No. 37) at Maryhill, a suburb of Glasgow. Exactly when it was founded we are unable to say, but that its beginnings date back at least to the close of the century in question is proved by the fact that it is mentioned in the Glasgow Directory for 1801, when its proprietors had a warehouse in Bell-street in that city, where also Mr. Collins, of Dalmuir, had one. In 1825 Messrs. Russell and McArthur were in occupation of this "Upper Dalsholm" mill, which must have been of fairly large dimensions even then, as it contained three vats. Before 1832, the partnership was dissolved, Mr. James McArthur continuing the business on his own account, manufacturing browns, etc, the Glasgow warehouse (the firm were also wholesale stationers) being then in Glassford-street, where Mr. McArthur —whose residence, as usual, was beside his mill—attended on Tuesday and Friday. By 1845, blottings had been added to the previous makes and the firm name was James McArthur and Co.

In 1857, Mr. Alex. McArthur, of this mill, patented a special form of rotary boiler or bleacher for fibrous materials, having several chambers, into each of which in succession the water or bleaching liquour was admitted as the boiler revolved in it. In the case of gas, such as chlorine, being employed, it was of course admitted to a closed vessel, in which the receptacle containing the fibrous material revolved. In 1875, Mr. William Cleland, one of the partners in the firm, retired, and three years later Messrs. McArthur and Co. gave up the mill altogether, retaining their wholesale stationery business, which is still carried on at the old address in Glassford-street, Glasgow. Mr. John Craig then took a lease of the mill, and proceeded to make extensive alterations and additions with the view of adapting it to the production of coloured cartridge and blotting papers, casings, etc. Later on, he took his son into partnership with him, so that the firm name has since been John Craig and Son. In 1901 the business was converted into a company, with a capital of £15,000. The mill was then turning out 30 tons of paper a week from its 60-inch machine. The present makes are white and coloured blottings, biscuit caps, M.G. manilla envelope papers, glazed casings, manillas, hoisery, cartridge, pressing and stereo papers; small hands, brown and coloured parcellings; friction and other glazed and unglazed sorts. A second machine (76-inch), for the manufacture of M.G. papers, has lately been put in, and electricity has also been installed in the mill, improvements which will no doubt give a considerable impetus to the business in the near future. There is a siding into the mill from the North British Railway, the station at Maryhill being within a few minutes' walk The firm's London agents have been successively G. and J. Prince, Upper Thames-street (in Messrs. McArthur's days), and R. Drennan, in King-street, and are now Messrs. Bruce and Co., 145, Queen Victoria-street, E.C.

Having regard to the fact that the "Encyclopædia Britannica" was essentially a Scottish enterprise, one would have expected that the detailed article on "Paper" appearing in that publication would throw some light on Scotch practice in the manufacture of that commodity. But neither in the first (1771) or second (1784) edition is there any mention of it. In the third edition (1797) one might almost say that the same is the case, although the article in question is very much longer than before, the only reference to Scotland in it is to the fact that Scotch-made pressing paper and boards were then so much appreciated that large quantities were exported to England.

Whilst the obnoxious and long abolished newspaper tax was in force, Scottish journals had of course to be printed—at any rate in part—on stamped paper. There being no stamping office in Scotland, this paper was imported from London by the revenue authorities (as mentioned in a previous article) who paid £400 a year for its carriage. Should the stock at Edinburgh run short at any time, then the local newspaper proprietors would have to curtail their issue accordingly, and it was equally unsafe to plan a change of size without first making sure that the Stamp Office could supply paper of the desired dimensions. In No. 4 of the *Reveur*, an Edinburgh periodical issued at the end of 1737, it is stated that "As the Stamp Office here was not furnished with better paper for our *Reveur*, we are obliged to put up with the present, but have commissioned from London a large fine paper . . . which we may expect very soon." Judging, however, from the quality of the material used for succeeding numbers, the new supply apparently promised by the Stamp Office never arrived. The increase of the Paper Duty from time to time of course led to a rise in the price of paper, and a corresponding increase in the price of newspapers. That of the *Scots Magazine*, for example, was raised from 6d. to 9d. in May, 1794, owing to the heavier duty then imposed, whilst in 1799, when the prospectus of the Edinburgh *Farmer's Magazine* was issued, it was mentioned that the price would be 1s. 6d. The first number (January, 1800) was so priced, but it was then stated that the "great advance upon paper" would necessitate the price being raised to 2s. in future.

Towards the close of the eighteenth century there were several prosecutions of Edinburgh newspaper proprietors for printing their journals on unstamped paper for one reason or another. There was an idea current amongst these gentry that the Stamp Act only applied to newspapers published at intervals of seven days or under, and that those issued less frequently were not required to be printed on stamped paper. Therefore the *Edinburgh Eighth Day Magazine* was started in September, 1779, and issued only every *eight* days in order to get round the Act. But the revenue authorities soon threatened a prosecution, and from May, 1780, the paper only appeared fortnightly. In 1785 a meeting of newspaper men and others was held at Edinburgh, when a petition to the Treasury was prepared, asking for the establishment of a Stamp Office at Edinburgh. The application was refused, the Commissioners of Stamps stating, among other objections, that the paper supplied from London was as good and as reasonable in price as could be supplied anywhere, although they agreed to lower the price and improve the quality in future. In view of this unsatisfactory reply, the Edinburgh Chamber of Commerce appointed a committee to enquire into the whole subject, and its report was presented in the autumn of 1789. The committee considered, *inter alia*, that so far from the paper sent from London being reasonable in price it was much dearer than an article of similar quality could be purchased for in Scotland, was indeed often such poor stuff as to be totally unfit for use. One reason for its dearness was the fact that it was brought by land at far greater expense than it could be shipped from England by sea. The Chamber therefore framed the following, among other resolutions:—"That by the present mode of stamping paper at London only the inhabitants of Scotland are deprived of the advantages that would arise from using paper of their own manufacture, and are compelled to accept of what is sent from London, which is generally bad, and much over-charged." The renewed agitation had no effect, and it was not until 1828 that the paper for Scotch newspapers was allowed to be stamped in Edinburgh.

Prior to the passing of the Patent Law Amendment Act in 1852, inventors who desired to protect their inventions in Scotland or Ireland, as well as in England, had to take out separate Patents for those countries, the ordinary English Patent only conferring protection in England, Wales, and Berwick-on-Tweed. It would have been manifestly absurd to patent in Scotland only an invention of any importance, and as a matter of fact hardly any case of the kind appears to be recorded in the Patent office annals, so far as papermaking is concerned. All the more important English inventions relating to that branch of industry, such as those of Fourdrinier, Dickinson, etc., were also patented in Scotland. Down to the end of the eighteenth century about twenty-five inventions in this line are recorded, but only two of them seem to have been of Scottish origin. The first of these was a "a method of heating the water and stuff in vats for making paper by steam," patented in Scotland and England in 1793, by Wm. Scott, a plumber, and Geo. Gregory, a tin-plate worker, both of Edinburgh. In the ordinary way, at that period, the stuff was heated by introducing a pan of fuel into the vat, and the patentees' idea was to pass steam from a boiler into the vat by means of pipes, which was considered to be a great advantage in every way. The second invention, a new process of bleaching, was due to Wm. Cuningham, an Edinburgh chemist, who patented it in both countries, in 1794. It was "A method by which, in the manuture of paper, rags known by the name of grays and ropes can be made into tea crown paper, and rags known by the names of tea crown and Bible crown rags and thirds can be made into paper called pot, small post, demy, royal inferior, or papers of similar qualities, and rags denominated seconds into paper called fine imperial, royal, super-royal, writing-royal and medium, writing demy, thick post, thin post, fine foolscap, and all other papers which have been hitherto reckoned of the finest qualities, and by which paper can be made from fine rags of a finer and more beautiful quality and colour than was ever before manufactured." According to the specification, the pulp or rag was boiled for a certain time in a potash ley, the making of which is described. This was performed in a copper having "a false bottom made of wood bored full of small holes." The water was allowed to drain out of the pulp or rags placed upon a drainer, when it was put upon "wooden moveable grates" "into a steam chest, or any vessel that will contain gas"; to this box was fixed a retort, in which gas was evolved from a mixture of manganese, sea salt, and oil of vitrol, and passed through the pulp or rags. When the gas was all "brought off" from the materials in the retort the goods were washed, again boiled in the potash ley, washed and submitted to gas as before, only the materials for obtaining the gas differed in strength, and muriate of lime was substituted for sea salt. It might be necessary to repeat the operation upon some goods a third time, and much in the same way. Coloured goods were to be "soured" before boiling with the ley. "This sour destroys the particles of iron contained in printed cloths, which, if allowed to remain, render the bleaching process imperfect." Owing to the then great expense of patenting an invention, some may not have been protected in this way. This was perhaps the case with one that we only know of through the medium of the *Annual Register* for 1770, where it is stated that "Charles Saing

(? Laing), a papermaker of Galston, in Scotland, has invented an engine for cutting rags, which will cut more in one day than eight men can do in the same time."

The introduction of new fibrous materials for papermaking, in place of rags, was still in the womb of the future. A few experiments of this kind were made on the continent in the latter part of the eighteenth century, but the idea seems not to have been taken up in Scotland. Not that encouragement was wanting, for about 1790 the (London) Society of Arts extended the scope of their offer of a substantial money prize for paper made "from raw vegetable substances,"—which for some years previously had been confined to England and Wales—so as to include Scotland, but without result so far as that country was concerned, down to the close of the century.

There were not, it is true, many Scottish paper mills then, probably not more than thirty or so, and even the majority of these seem to have made little else than wrapping or other coarse sorts. Only in a few instances were writings and printings turned out, and most of the output in this line was probably consumed locally. There was a fair amount of paper exported from the Scottish mills in the Lowlands to England then, particularly of certain special sorts, but the bulk of what found its way over the border was probably dispatched in the form of books printed by such firms as Jas. Ballantyne and Co., of Edinburgh, as the Scottish capital had for many years prior to the end of the eighteenth century assumed an important place in the ranks of great British printing trade centres. Occasionally one finds definite evidence of the use of Scottish paper in books printed there about this period. For example, the second edition of Bland's "Edwy and Elgiva," 1809, was printed by Ballantynes on a rather poor variety of toned wove paper, watermarked "D. and A. C., 1808," evidently manufactured by D. and A. Campbell, who occupied the Millholm Mill, at Cathcart, before it was taken over by the John Webster mentioned in our second article, who put in an extra vat there. He had a Glasgow warehouse in Wilsons-court, Argyle-street, whilst Mr. Weir, proprietor of the older Cathcart Mill (No. 19), had his residence and warehouse together in Miller-street. Weir likewise put down an extra vat on taking his mill over, about 1830, from the previous owners, Archibald Muir and Co. The next occupant was David Wilson, and then came Lindsay, referred to in our former article. In 1870 Millholm Mill employed 162 hands, and used 360 tons of rags and 650 tons of esparto annually, the output being 750 tons of writings. The Cathcart Mill was on a much smaller scale, employing only 13 hands. It used 300 tons of rags per annum, and produced 200 tons of millboards.

These last few notes rather anticipate future events, but they are included here as comprising such additional particulars as we have been able to glean concerning the two Cathcart mills, one of which certainly, and the other most probably, was at work in the 18th century.

The end of that century found the operation of making paper conducted on practically the same lines as it had been at the beginning of it, or, for the matter of that, at the commencement of the fifteenth century, or it may be centuries earlier still, the only improvement of any importance being the introduction of the "Hollander" beater in place of the old "pestle and mortar" type of apparatus illustrated in our second article. The papermaker's engineer was practically non-existent in the eighteenth century, as most of the plant and fittings—often, indeed, the mill itself—were of wood, so that the furnishing of a paper factory was a job that came within the powers of an ordinary carpenter, assisted by a millwright and a labourer or two. The papermaking machine, though actually invented a year or so before the close of the century, was still in its experimental stage in the country of its creation (France), and it was not till 1807—see third article—that the proprietor of the Culter mill, by putting down one of the new-fangled machines there, laid the foundation of that revolution in Scottish papermaking methods which ultimately led to the entire extinction in that country of the old process of papermaking by hand.

The stationer was of course in evidence, but he was generally a bookseller as well, and often dealt in writing materials, etc., the "wholesale stationer," as distinct from the town depôt of a paper maker, being a product of the future, at any rate so far as Scotland was concerned. The rag and paper stock merchant, too, was likewise to come into being in the next century, as most of the materials of this sort collected for paper mills were gathered by humble rag pickers, mostly of the female sex, as the result of house to house visitations. Such public institutions as existed, and even large private families, then sent their rags to the mills, whose proprietors were always anxious to enlist the services and sympathies of the public at large in their efforts to establish the papermaking industry on a sound basis, and thus give local employment to those who stood in need of it, by putting them on to the collection of the necessary raw materials.

In default of railways, the manufactured paper had of course to be despatched from the mills to customers by waggon, often only at intervals of a week or two, or in the case of export to England, by small coasting vessels. The motive power then used in the mills was probably always a water wheel, the few steam engines set up in the country being chiefly used for pumping purposes. And over and above all the other disabilities which the Scotch papermaker of the eighteenth century laboured under, there was the exciseman, spinning his web of red tape round nearly every operation that entered into the manufacture of paper. However urgent an order might be, the paper could not be sent out of the mill until he had seen, weighed and labelled it, and made multifarious entries of the parcel in the books kept for the purpose by himself and the mill owner. Although it appears tolerably certain that the pair of them were on pretty good terms with each other in Scotland, this was mainly due to the upright and careful methods followed by the Scottish papermakers. Not having anything to conceal, they had nothing to fear from the periodical visits of the representatives of His Majesty's Excise, but nevertheless there can be but little doubt that upon the whole, and in his official capacity, the exciseman was regarded by paper manufacturers as an unspeakable nuisance.

It is questionable, however, whether, had he been banished from the mills a century earlier than he actually was, the paper trade would have made very much greater progress, as several factors militated against such a possibility. For one thing, the demand for paper, in the latter part of the eighteenth century, was a mere fraction of what it is now, as a large proportion of the population was more or less illiterate, often unable to either read or write. Even had they been possessed of those accomplishments, or either of them, the paper trade would have been probably but little the better for it. As regards writing, the postage on letters was so heavy, except for local circulation, as to be almost prohibitive to the humbler classes, with their low wages and scanty means. This difficulty was experienced until a much later period. Not long before the adoption of penny postage in 1840 1s. 1½d. was charged between London and Edinburgh for a letter under an ounce in weight, containing no enclosure. To cope with the consequent demand for a thin letter paper, Messrs. Cowan and Sons introduced, soon after 1835, a make in sheets 4 by 3½ feet in superficies, but still less than an ounce in weight, so that upon a table 4 feet square several persons could write upon the sheet at the same time. The bulkiness of the packets formed by folding up such a letter often deceived the postal officers into charging excess postage in error. Indulgence in reading was also very circumscribed, for a variety of reasons. In the first place, books were few, apart from those of a professional character, treating of the law, medicine or theology—dear, and dull to the last degree, judged by a twentieth century standard. Of general popular literature there was but little, and of fiction even less. Fielding, Smollett and Richardson already belonged, at the end of the eighteenth century, to a past generation, and writers like Scott were yet to make their appeal to a future one, whilst the appreciation of authors such as Burns was still little more than local. Newspapers, which we in our day sometimes dub the "poor man's Bible," were then nearly as much out of his reach as books, owing to the high price at which they were issued, due chiefly to the three-fold tax, on the paper, the advertisements, and the journals themselves. When all these points are taken into account, it can hardly be wondered at that the majority of Scots papermakers, a hundred and twenty years or more ago, found their profit to lie chiefly in the production of wrappings or the like.

A PERNICIOUS PRACTICE.—The executive committee of the New York Master Printers' Association, has received complaints concerning the practice of buyers of printing of submitting to a second printer for estimate proofs which have already been submitted for correction and approval. This is a pernicious habit, and more widespread than would commonly be supposed. The committee recommends that the members decline to consider work coming in this way, and wherever possible secure the name of the first printer and advise him of what is being done. It is also recommended that occurrences of this nature be reported to the business manager.

Dutch Strawboards.

An Increasing British Demand.

The following figures show the British imports of paper, etc., from the Netherlands during the last five years:—

	Total Imports.	Retained in the U.K.
1912	£1,119,942	£1,084,237
1911	1,084,040	1,070,561
1910	1,018,651	998,356
1909	907,339	892,408
1908	859,927	840,590

Large quantities of strawboards find a market in the United Kingdom. The following classification relates to goods retained in this country:—

1912	48,735 cwts.	£66,698
1911	43,318 ,,	56,536
1910	42,385 ,,	51,449
1909	37,344 ,,	46,537
1908	40,395 ,,	47,156

English as She is Spoke.

Here's one about an American printer whose vicissitudes took him across the ocean last year and landed him in the town of London. The printer is back in Cleveland now, and tells the story himself.

This printer bethought him of starting a little paper in the heart of England. So he rented a little building and then went to purchase his type and presses. For the type he stopped at a typefounder's place and explained his needs.

"I want some type," he said.

"We don't sell type here," answered the clerk, blankly. "You might get it at the draper's shop over the wye."

"How should I get type at a draper's shop?"

"How should you get it anywhere else, may I awsk, think you, sir?"

"Well, in my country type is sold at a typefounders, not at a dry-goods store."

"Aow? Did y' wish toype, sir? I thought you wisht type, such as they have in type measures and type worms. You didn't wish type to bind on the edges of frocks, then, but toype to print a paper with? Step this wye, thenk you, sir."—*Cleveland Plain Dealer.*

THE late Mr. Wm. Frederick Paxton, music publisher, of Macfarlane-road, Hammersmith, W., has left estate of the value of £56,743

THE late Mr. Charles Thomas Weatherby, of Messrs. Weatherby and Co, publishers of the *Racing Calendar*, has left estate of the value of £49,062.

A FEW Reflections on Offset Machinery.

By Mr. Frank Heywood.

A Lecture and Discussion Before Members of the Printers' Managers and Overseers Association.

Another technical lecture, on a topic that is engaging the serious attention of every modern printer — offset machinery — again attracted a large attendance of members at the monthly general meeting of the Parent Body, P. M. and O. A., at headquarters, the Old Bell, Holborn, E.C., on Tuesday evening, 4th inst. The walls of the room were covered with a large and instructive collection of offset printing, showing the wide range of its applications, and the lecture was further illustrated by lantern views of diagrams and offset machines.

The President, Mr. C. J. Gray, was in the chair, and in opening the meeting briefly referred to the death of one of their oldest members in the person of the late Mr. W. W. Fox. They all knew, he said, what a hard worker he had been in the past. It was his (the President's) lot to preside at a costing meeting at the Salisbury Hotel recently, when he mentioned that Mr. Fox was the pioneer of the Costing Campaign which the employers had been conducting with such avidity. He was sure this meeting would pass a vote of condolence with the widow and family in the loss they had sustained in common with them.

On the motion of Mr. W. H. Burchell, the following new members were elected, viz.:—Mr. A. Morrison (Messrs. Grant and Co., Ltd., litho), and Mr. H. H. Saltinstall (Messrs. Seargeant Bros., Ltd., Abergavenny, letterpress overseer.)

The following candidates were nominated, according to rule, for the various offices stated:—President, Mr. C. J. Gray; vice-president, Mr. J. C. Pugh (Mr. T. A. Catling retiring from that office); trustees, Messrs. W. H. De Wilde, and F. W. Seeley; treasurer, Mr. C. Durston; secretary, Mr. E. C. Moyce; assistant secretary, Mr. G. Phillips and Mr. W. Hermon Gill; council, Messrs. T. A. Catling, A. J. Rowley, T. B. Lapworth, B. C. Albert, A. W. Hart, H. J. Forder, and A. H. Wilson.

Mr. C. Morley, in tendering his resignation of the assistant-secretaryship, said he wished to retire from official life in the Association, his health and years being against him giving it the attention that would bring satisfaction to the Association and credit to himself. He took the opportunity of thanking the members very sincerely for the confidence they had placed in him in the past, and for the favours they had granted him during his assistant-secretaryship. It had been a wish of his that he might put in 21 consecutive years of official membership, but he found he would have to go down at 20. (Applause.)

Mr. E. H. Berryman said he joined in the general regret they all felt that Mr. Morley had found it necessary to retire. Mr. W. H. Burchell also expressed his regret at Mr. Morley's retirement.

Mr. Berryman, as Chairman of the Committee for Revision of Rules, announced with regret that Mr. V. Ives had retired from the Committee owing to an entirely private matter, which prevented him giving up the necessary time to the Committee. He asked the meeting to appoint a member who had had some experience in committee work to take his place.

Messrs. Phillips and Hardy were proposed, and on a vote being taken Mr. Phillips was elected.

The Chairman then called upon Mr. Heywood to read his paper, which in the main was as follows:—

The Lecture.

Mr. Chairman and Gentlemen,—My first word to you this evening must be one of appreciation of the honour you have done me, not only in asking me to address you, but to do so on such a subject as

Mr. Frank Heywood.

(Junior Director, Messrs. Geo. Mann & Co., Ltd.).

offset machinery, and I trust that I may deal worthily with a subject of such importance. My chief difficulty is not what to say, but what to leave out. I also appreciate and rejoice in the fact that I am talking to practical men, who in their daily vocation are responsible for, and have the oversight of, the printing which is turned out day by day in London.

If I understand matters correctly, the functions of your Association are not only of tremendous value in the labour world, as being the means of holding the balance evenly between the employer and the manual labourer or journeyman, but also of great assistance because of the opportunity the Association gives of meeting together and talking over matters which vitally concern your daily work. And the fact that you from time to time arrange lectures on all the different aspects of the printing trade, shows that you are men who are keenly interested in your craft.

As you are no doubt aware, I am a member of the firm of George Mann and Co., Ltd., and I wish to make it perfectly clear at the outset that I have come here to talk to you of their machines and theirs only. I am honestly of the opinion that the worst salesman is the one that runs down his competitors' machines, and I can assure you that I have not come here to do that. In talking of the merits of Mann's machines I am fully conscious of the good points of others, because whether you are building an aeroplane, Dreadnought, or a printing machine, it is impossible to eliminate the element of compromise. Everything in this world has its limitations; nothing is perfect. I am no believer in that axiom of the legal profession, "If you have no case, abuse the opposing counsel."

In the March issue of the *Imprint*, Mr. Daniel Powell, writing an article on Offset Machinery, said (I quote his exact words): "Next in alphabetical rotation, though in importance it might reasonably have claimed first place, is George Mann and Co., Ltd., for there are more machines of this firm's construction at work in this country than any other, and they are even well received after paying import duties in Canada, America and Germany. They construct a greater variety of offset machines than any other firm of engineers that we know of, both as regards size and work, and it is largely due to the persistent energies of this firm that the offset process is where it is."

You will believe me when I tell you that this was not inspired by us, but, whilst confessing to its truth, I wish to emphatically add that the result, of which Mr. Powell speaks in that article, could not possibly have been obtained unless we had received the loyal and enthusiastic support of men such as yourselves, who not only do their share in bringing offset machines into successful operation in printing establishments, but also in their spare time devote their brains and energies to perfecting those processes, by means of which the peculiar merits of the offset machine and process can be still further taken advantage of, and I take this opportunity of publicly expressing the thanks and appreciation of my firm to those enthusiasts—many of whom are to be found here to-night. An engineer may make the most perfect machine in the world, its mechanism may work in perfect unison, but unless that machine receives the intelligent support of the printer into whose hands it is placed, the chances are it will be a failure.

Having thus introduced myself, and as it were both of us knowing where we are, I will now proceed with my lecture proper, and I shall divide it into

Three Main Sections.

1st.—A Brief Outline of the Origin of Offset Printing;

2nd.—Offset Machines as such;

3rd.—A discussion of what the Offset Process can and will do, or in other words, its value to the printer;

and I trust I shall not elaborate too much nor fail to make my meaning perfectly clear.

My first point, as I said, will be dealt with very briefly, but as there are, I take it, a large number of you who are interested purely in letterpress matters and have not that keen interest in lithography which has enabled you to know exactly what offset printing is, I am taking the liberty of explaining first of all that offset printing is the art of printing from rubber upon paper or tin.

Digitized by Google

That last word may perhaps surprise you, but I use it because I do not agree that offset printing was discovered upon a paper printing machine.

As the old saying goes, "There is nothing new under the sun," and offset printing is simply a new method of applying a very old process, and I am convinced that the lithographic art, as applied to paper in offset printing, owes much to its older sister, the tin plate decorating trade, in fact its origin can be traced directly to it.

It is obviously impossible to print from one very hard surface like a lithographic stone or metal plate direct upon a tin plate (except under abnormal conditions), so a suitable medium—in the shape of a rubber blanket—was devised to do the printing, and although this has been in use for over thirty years,

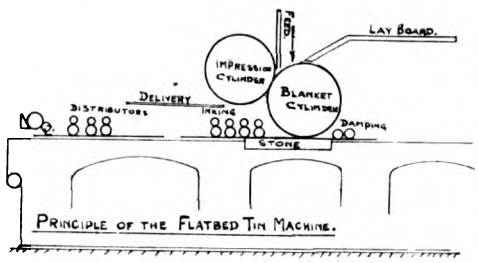

Fig. 1.

strange to relate it was never applied to paper printing, commercially, until about six or seven years ago.

Tin plate printing, or decorating as it is more technically termed, dates back some forty years, and the romance of this process lies just here, that the tin printers had the offset process in their hands for practically all these years and never realised its enormous value and the possibilities attached to it when applied to paper.

A member of your Association whom I have heard lecture here, namely, Mr. A. J. Rowley, twenty years ago produced delightful chromo printing upon paper, cardboard, silk and satin from a tin printing machine using this rubber blanket as a medium, and as a Britisher I deny the claim of our American cousins that offset printing was invented in that land, where they believe all the genius of the universe springs from. To be quite fair, however, one must recognise that Rubel, in America, was the first to realise the real merits of offset printing, and to endeavour to put them into practical operation.

I take it, of course, that everyone in this room is acquainted with the elementary principles of lithography, namely, the antipathy of water and grease, and although the offset process is in this way a very great achievement, yet its success has very largely grown out of the fact that it adapts the same old principle, only under slightly different conditions and in an extended manner.

I believe it is recorded somewhere, what Senefelder once wrote, that one of the main difficulties of his discovery was that the design had to be written or drawn upon the

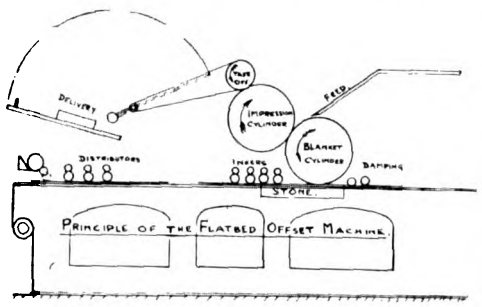

Fig. 2.

litho stone backwards, or negative. The Chinese or Japanese artist may think that this is quite in the true order of things, but to their Western brethren it certainly came as a drawback, although it is one which is overcome by practice. Had the offset process been in use in Senefelder's time no one would have rejoiced more than he.

For offset printing the design has of course to be laid down on the litho stone or zinc or aluminium plate, the right way round, reading what is termed positive. The design is then transferred to the rubber blanket, which will read negative, and this, printing upon paper will produce a result in the correct position for reading.

To trace the origin of the word itself is simple. The merest novice in the printing trade knows what the word "set-off" is, and it is an open secret that this abomination to all overseers has done more to spoil their chances of reaching Paradise than anything else that happens in a printing office. All of you, I know, love set-off like the devil loves holy water, and therefore you will have no difficulty in recognising how the word "offset" has been universally adopted to describe the method of an ink design being set-off

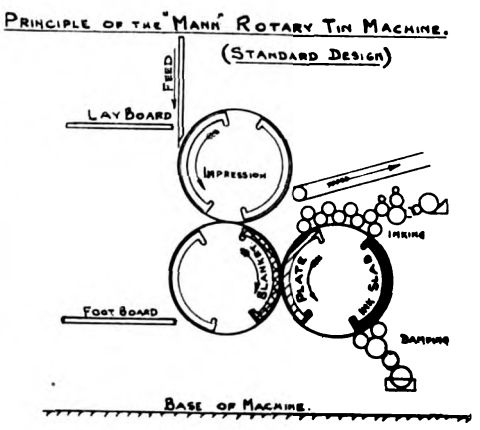

Fig. 3.

upon the rubber blanket, and the rubber blanket in its turn setting it off upon paper.

I leave this section of my lecture at that because I shall elaborate in the third section as to what remarkable results may be obtained, but I thought it necessary to make the process, in itself as a process, quite clear before coming to my second section, namely,

Offset Machines as Such.

Contrary to the usual practice, and I trust you will not blame me for this, and also recognising that I am not addressing the Ancient Order of Old Fogies, nor an Antiquarian Society, but the parent body of the P.M. and O.A. which, it has been most emphatically impressed upon me, is a very live and up-to-date collection of those interested in what is happening in 1913, I propose sparing you the painful process of going through the wearisome details of what has happened—say, during the last fifty years—in the way of machine construction, in order to arrive at litho printing machines as they are to-day.

I do not believe for one moment that you are a bit interested in hearing that Mr. So and

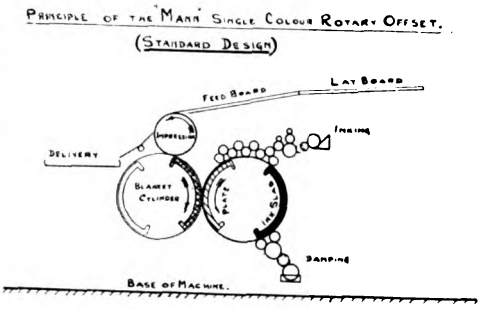

Fig. 4.

So, in the year 1800 and something or other, inflicted upon your long suffering ancestors an old mangle of a machine which, after much coaxing and a great expenditure of manual labour, produced what they termed a "Lithograph."

The only bit of ancient history which I will refer to is an incident which occurred about eighteen months ago. My firm had sold to a Reading client a new tin printing machine, taking an old one in part payment. This ancient piece of mechanism was being broken up by our engineer, when the senior partner of the firm—a true printer, a man who evidently has a warm corner in his heart for his machines—said he could scarcely bear to see the old machine broken up because it was the first tin printing machine that they had installed in 1879, and he believed that it was the first one of that type ever manufactured and run by power.

This I claim was

The First Real Offset Machine.

In order to enable you to better comprehend what I am saying I have arranged—I trust with your approval—to throw some diagrams upon the screen, for they will show in concise form what I wish to emphasise.

Offset machines can be divided into two main sections, flat-bed and rotary, and I take the flat-bed machine first, for it naturally came to be used first, seeing that it is simply an adaptation of an ordinary litho machine by the addition of another cylinder to the existing one.

The illustration (Fig. 1) shows the type of tin printing machine which has been in almost universal use since twenty-five years ago. The sheet of tin is fed in a vertical manner its own weight bringing it up to the front lays automatically, ensuring dead register along the gripper edge. The sidelay register, of course, depends upon the accuracy of the feeder.

When I explain that the bottom cylinder has stretched round it a rubber blanket, it is perfectly easy to follow the process, by means of which the design is "setoff" or offset from the stone or the metal plate to the blanket, which in its turn prints upon the tin when it is taken round by the top or impression cylinder. The ability in the tin to spring itself straight effects the necessary delivery action.

In order to make my technical terms quite clear to you, I must explain that when I use the word direct, I mean printing from the litho stone or metal plate direct or straight upon paper. I should explain here that the word direct as applied to litho printing is used in this way in this country. In America the custom is to call them straight presses when they wish to distinguish the flat-bed or the rotary machine printing in this manner, from the offset machine.

You will at once recognise the similarity of principle of this flat-bed offset machine (Fig. 2) to the one previously shown, viz., the tin printing

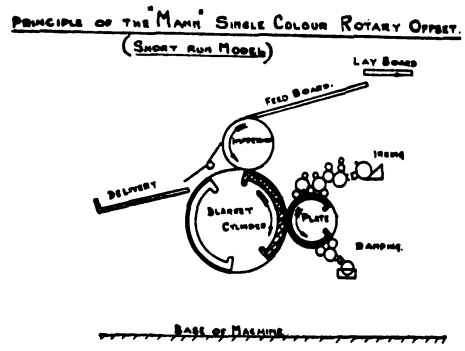

Fig. 5.

machine. The method of printing is at once obvious after the explanation given previously of the tin printing machine. The sheet is carried round by the gripper on the top main cylinder, the impression being received from the rubber covered cylinder immediately beneath it, and it is taken off by the flyer drum in the usual Wharfedale manner.

As a matter of fact, it is a very simple matter indeed to convert a flat-bed tin printing machine into a flat-bed offset machine. The only difference being that you make the feeding mechanism and delivery apparatus for paper instead of for tin.

Comparing it with a rotary offset machine, one advantage of this type of machine is that it can be used for printing either from litho stones or plates as desired. It also has the additional advantage in that you can print by the direct or straight method on to the paper, or by the offset method, as desired. Beyond these advantages, in the competitive commercial world to-day it stands no chances whatever with the high speed rotary machine, although, strange to relate, the flat-bed offset machine did not come into general use for a year or so after the rotary machine had to a large extent proved the value of the process.

The Rotary Tin Printing Machine.

The first design of this machine (Fig. 3) was conceived by Mann and Co. in 1903, and was

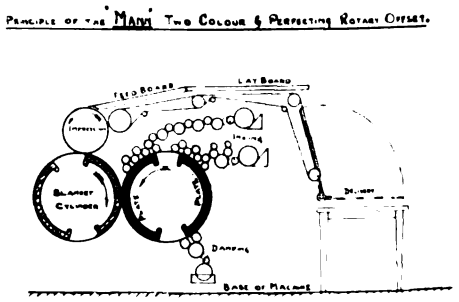

Fig. 6.

shown at the 1904 Printing Exhibition in London, when they received a medal for its great novelty, and as many of you know, this rotary tin machine is now universally adopted by the great majority of tin printers in this country, and a large number in all other parts of the world, including the U.S.A. You will notice it is similar to the flat-bed, but that instead of the flat reciprocating bed carrying a stone, a third cylinder of equal diameter to the other two, takes its place, round one half of which is an ink slab, the other half carrying a plate which is inked and damped in the usual manner, the design then being trans-

Digitized by Google

ferred to the rubber blanket and from thence on the tin in exactly the same manner as on the flat-bed machine previously described.

The top cylinder round which the tin is taken is what I particularly wish you to look at and bear in mind, for out of a modification of its proportionate size was evolved the Rotary Offset machine.

The Rotary Offset Machine.

To illustrate the principle of the machine I now throw upon the screen a simple outline of the main principles (Fig. 4), from which you will be able to gather the ease with which one can be converted to the other, viz., rotary tin to rotary offset. All that has been done is to reduce the diameter of the top or impression cylinder to one half,

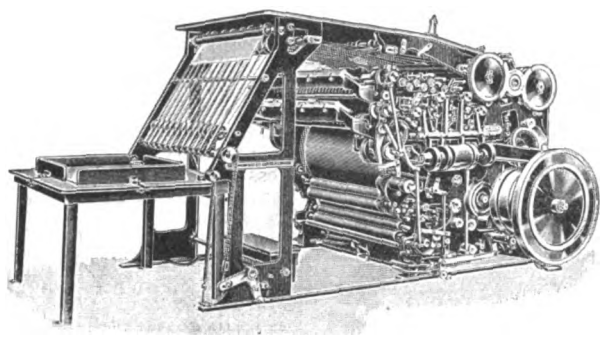

Fig. 7.

and arrange the feeding mechanism and delivery apparatus for paper instead of tin.

Now I desire to call your special attention to this combination of cylinders, which I might say in passing is a master patent and fully protected throughout the world. As you will see the general arranagement of things is very practical, and the advantages of this special combination (of two full sized and one half size cylinders) may be summed up as follows:—

1. The zinc or aluminium plate upon which the design has been transferred is accessible between the damping and the inking. To the practical lithographer this will appeal very strongly indeed. Should the work thicken at all, and on the best of plates it will do so at times, the operator can by simply using his water sponge pass it over the defaulting section as the plate comes round, clean away the surplus ink, and the plate travelling on its course goes immediately under the inking rollers to receive its supply of ink before it passes again on its course on to the rubber blanket.

2. The delivery of the sheet is at a most convenient height, immediately under the eye of the operator.

3. The inking rollers are also at a most convenient height, the ink duct being just above breast high, and the damping rollers below, near the ground with the printing plate immediately between.

The operator sitting on a stool at the back has therefore everything he desires under his control. He sees his plate in front of him with all the adjustments for ink and water necessary to his hand.

4. The damping is right away from and not immediately above the feed board, and particular attention has been paid to this damping motion, for it is a well-known fact that brilliant results in lithography, whether printing direct or by the offset method, depend upon keeping the amount of water down to the very minimum so that it does not overcome or destroy the brilliancy in the ink.

5. Large plate cylinder, enabling one section of it to be used for the printing plate, and the other for an ink slab for giving depth of colour and solidity of impression. This ink slab is a great boon.

6. The impression cylinder being half size makes two revolutions, which gives a longer period for feeding than on the single revolution machines which take a sheet every impression. The first takes the sheet round to get the impression from the rubber blanket, and the second is occupied in delivering the sheet. This is identical, of course, with a two-revolution letterpress machine.

Rotary Machine for Short Runs.

I might mention just here that a slight variation of this combination of cylinders (Fig. 5) is utilised for building the smaller sizes of rotary offset machines, the principle being that the plate cylinder is reduced to the same size as the top or impression cylinder. The rotary machine is often accused of taking too long for changing over when printing short runs, and in this little machine you see a method adopted whereby the inking rollers are reduced by about 33 per cent., thus saving a great deal of time in "wash up," yet the printing qualities are not impaired because the plate cylinder makes two revolutions, or in more well-known language, gives double rolling for every sheet printed. With the machine running at high speed it is claimed that this is a very profitable one for short runs.

For Colour Work.

I have mentioned previously how the rotary offset machine has been obtained from the rotary tin printing machine, and you may have thought I laboured the tin printing side of it rather much, but the tin printers had first of all to solve the difficulty of getting good colour printing from a very unfavourable surface. The hard non-absorbent surface which the paper printer finds so hard to deal with is ever present with the tin printer, and in order to obtain any satisfactory results he has to overcome the highly polished surface of the tin by printing first of all as the base a good white printing, whilst for the best effect sometimes two, and even three, are printed.

On this foundation the printer builds up his subsequent colours, and in nearly all decorated tin work you will find the very densest of solid colours being required. In fact, tin printers pride themselves on being good colour printers, and as their machines have, of course, to give them what they want, particular attention was paid to the rolling power of them.

Owing to its evolution from the rotary tin printing machine, Mann's Offset Machine was thus equipped with the necessary for producing good colour printing from a rubber blanket, and it is in this sphere of the printing art that these offset machines are used so extensively. The samples of heavy solid colour around the room bear me out in this.

You may perhaps wonder why we term these Single Colour Rotary Offset Machines. We do so because this same combination of cylinders has enabled us to build what we claim without boasting to be not only a remarkable machine, but the only one of its kind in the world, viz., our

Patent Two-Colour and Perfecting Rotary Offset Machine.

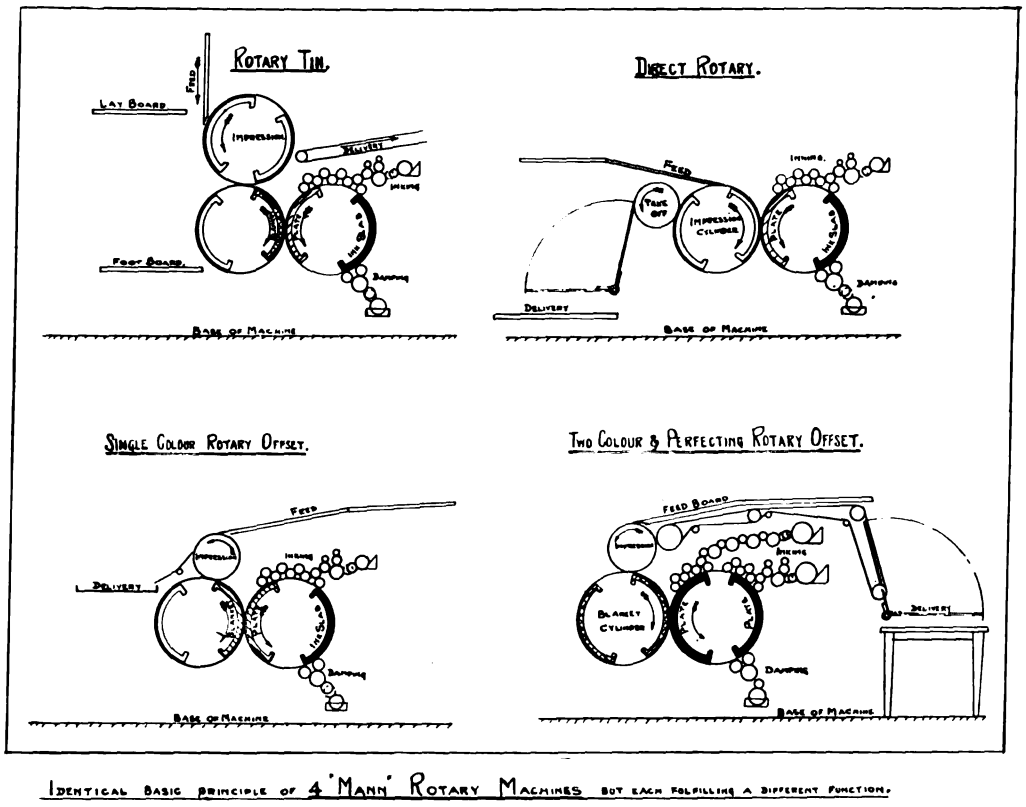
I said the machine (Fig. 6) was a remarkable one, and when I describe the three specific functions that it will perform I think you will agree with me. It is able to print at one operation in any of the following ways:—

Two colours on the front of the sheet.
The same colour front and back.
A different colour front and back.

With reference to the first the procedure adopted is this: the plate cylinder carries instead of an ink slab as on the single-colour machine, another printing plate making two, one on each sectlon of the cylinder; the middle cylinder has two blankets on it in corresponding positions, and the top or impression cylinder being two-revolution, all it has to do to print two colours at once is for the gripper to hold it for these two revolutions just as in an ordinary Wharfedale two-colour machine. Two distinct inking arrangements are provided, but curious as it may appear one set of dampers has been found quite sufficient. The first machine of this kind which was built had two sets of damping rollers, but we always found that the operator worked with one set quite satisfactorily.

Strange as it may seem no disturbance or tinting of colour takes place through the super-imposing of one colour upon another. Then, as I said, the same machine can be used for perfecting, and the time taken to change over from one to another is only a matter of a few minutes, the alteration required being that the impression cylinder makes its first revolution empty, thus getting the impression from the rubber blanket upon itself, and taking the sheet of paper upon its second revolution, both back and front are printed simultaneously.

I trust I have made this quite clear, although I have often found this ingenious though simple device for perfecting is not always understood. The top or impression cylinder is, of course, always fitted with a rubber blanket.



The value of this machine (Fig. 7) to those who have work, say, in an odd number of colours on the front and type matter on the back, such as post cards, cigarette stiffeners, or jobs of that character, is tremendous, owing to this unique combination of either printing two colours or perfecting as required.

The sizes in which this machine is built range from quad crown to eight crown, with a printing surface of 64-in. by 48-in., and in spite of its size and what it performs one operator and one feeder are all the staff necessary for its working.

It is not a machine to be recommended for short runs, but, of course, for long runs its output is simply enormous.

I will complete the machinery section by briefly referring to that useful little adjunct to offset printers, viz., the Offset Proving and Reversing Press. With the work on the litho stone or plate having to be positive, a proof pulled in the ordinary litho transfer press of course is not altogether practical, and looking at the reflection of it in the mirror is not, of course, so good as seeing the actual proof itself the right way round which this little press effects in quite a simple manner. The cylinder is covered with a rubber blanket and is rolled first over the stone or plate and then a sheet fed into the grippers of the cylinder which travels on to the other end of the press, using the flat table it passes on its journey thereto for giving the necessary impression to the paper. It is also extremely handy for reversing transfers from negative originals.

The next diagram (Fig. 8) is self explanatory and its practical value is obvious—if an operator has been used to either a Rotary Tin or Direct Rotary machine he has practically nothing to learn when coming to an offset machine, for their main principles are identical. With that I now complete in as brief a manner as is possible the main manufactures in offset machinery. Needless to say I could tell you a great deal more about them if time permitted.

Identical Basic principle of 4 'Mann' Rotary Machines but each fulfilling a different function.

Fig. 8.

Digitized by Google

They are, of course, fitted with all the latest and most up-to-date appliances for efficiently and economically enabling the operator to turn out work rapidly and of a uniform quality.

Its Practical Value to Printers.

I pass to my third and last section, and I venture to prophesy that this will prove the most interesting to you gentlemen to-night.

It is all very fine for engineers to talk in their technical way of this combination of cylinders or that mechanism or inking arrangement, but after all what you really want to know is what the offset process is doing and what it can do, or in other words it practical value to you as printers.

There are printers who say—I won't say they believe, but they say the value of offset printing is practically "nil," but I feel convinced that their number is, in the language of the poet, growing "small by degrees and beautifully less."

There are others who say it is only a passing fancy and will die a natural death like "ping-pong" or futurist drawings, but, gentlemen, is it possible, I ask you, to believe anything but that offset printing has come to stay, and has to be seriously reckoned with when one firm alone is sending practically one machine every working day to some part of the globe, when we know that many of the largest firms in this country have adopted it, when we know that in that English speaking and hustling land of America every lithographer and many typographers have offset machines as an integral part of their plant?

If necessary I can produce documentary evidence from lithographic firms of repute who intend as opportunity offers to gradually replace every printing machine they have, even including direct or straight rotary litho machines, laid down only two or three years ago. This may seem a startling fact, but we live in an age of rapid evolution and the printing craft is bound to get its share of the shocks and uprootings which are being handed round.

On analysis, however, the value and the advantages of offset printing can be better realised and understood. Let us analyse them and see then what these merits are.

First and foremost is the remarkable quality of printing that can be obtained, combined with the fact that the surface to be printed upon is perfectly immaterial.

The extraordinary beauty of line work, the wonderfully artistic softness of screen, chalk or chromo work produced by the offset method is getting to be more generally recognised, and its commercial value realised as it becomes better known.

For instance, paper which has hitherto had to be damped before printing can now be printed upon with perfect ease even when quite dry. This in itself effects an enormous economy in production. Extremely hard or bond papers offer no difficulty at all to the perfect resiliency in the rubber itself. Work of a very fine line or screen character can be printed with perfect ease without smashing or breaking up at all, giving perfect results.

I do not mean to say for one moment that you should print on *any* sort of paper that may be handy, for *every* job upon the offset machine. An offset job has to be studied as to which paper will produce the best results.

You know even better than I do the difference in effect you get on different paper, even when every other condition is exactly the same, but very often a great saving in the cost of paper can be effected by the offset because of its adaptability in printing upon practically any surface from coarse canvas to fine art paper.

The Second Valuable Asset

in the offset process for printers is the remarkably small quantity of ink required. Compared with the straight or direct method, a saving of anything up to seven-tenths, or even more, can usually be effected, although naturally the saving varies with different jobs, but in any case those who have taken the trouble to get actual figures are often more than surprised at the results.

This saving is again explained by the resilient properties in the rubber, which enables every pore and crevice of the paper to be thoroughly searched, and where necessary a film of ink to be deposited, thus giving depth and density to the work.

This is of course in direct contradiction to the method adopted in direct printing where the ink is deposited on to the paper., and squeezed in under heavy pressure, and carries an additional advantage in the fact that so little ink being used the danger of "set off" is reduced to almost vanishing point, and also, requiring very little time for drying, subsequent printings can be proceeded with in astonishingly quick time.

The next point of value to the printer is that by using a rubber as a printing medium there is no necessity at all for the heavy pressures which are well known to be required in the direct or straight method of flat-bed or direct rotary machines. In fact to be correct, just one-third of the pressure is necessary so that the saving in wear and tear is considerable. You will notice that I said that this point (*i.e.*, saving in wear and tear), will be of value to the printer.

But whatever the poor printers' engineer thinks, his client rejoices in this light pressure, because it helps him tremendously in obviating that great bugbear of the printers, *stretching of paper*.

Furthermore, the fact that the paper does not come into direct contact with the wet stone or plate prevents a lot of moisture getting into the paper, and thus increasing a tendency to stretch.

Therefore in two ways, light pressure and the paper getting only in contact with the dry blanket, shows that the offset process can do a great deal to alleviate the trouble of printers, especially for tight register work and colour printing.

It can also accomplish something which I fancy all letterpress printers would consider a long way towards reaching the millenium, and that is, the longer you print, under proper conditions, of course, by offset, the sharper and clearer your work. No type to wear out—and again, no rules to cut through your paper, no spaces or quads to rise up and spoil your work, and incidentally your temper also.

Within limits, the longer you print by offset the better your work.

In order, however, to show you that I am trying to be impartial, one of the disadvantages of offset printing is that where gold or bronze printing has to be done, this invariably has to be done last, on account of the tacky nature of the surface of the rubber blanket. This blanket tends to pull the bronze in subsequent printings if it is printed first, although before long I have no doubt that this difficulty will be overcome.

For Litho Work.

In conclusion, and speaking generally and taking a broad view of the offset process since its introduction some six or seven years ago, and what it has accomplished up to date, I make a bold statement, but I venture to make it because I speak of that which I know is happening, when I say that the offset process is an ideal one for lithographic work.

I believe everyone is now practically agreed that it is quite the right thing for every kind of commercial work, such as letter headings, bonds, cheques, etc. Even the most convinced opponent of offset printing when it was first introduced will now admit this, and the prejudice which existed to begin with against reversing so as to get the design on the printing plate positive, is now fast disappearing, and it is looked upon as a very ordinary thing indeed.

I invite your critical inspection of the samples around the room to verify this, and also to prove my claim that there is no difficulty in getting good solid depth of colour printing from our offset machine, and I might mention that all the colour samples which you see have been produced by means of single, not double, rolling. Many people are still unconvinced that offset will print solid colours. Well, here is proof positive that it will.

In London, in the provinces, and in that country which has sometimes been called the home of lithography (Germany) you will find the Mann machines dotted everywhere, producing colour work. When I say colour work, of course I include everything under that heading, whether it be beer labels, cigarette stiffeners, show cards or the highest class of chromo work.

If I may give you British printers a friendly hint, it will be that you must look to your laurels very keenly indeed, otherwise your Continental brethren will, on account of their readily adopting the offset machine for every class of colour work, beat you in the commercial race.

I am speaking, of course, to those of you who are lithographers pure and simple. I am glad, however, to realise that those of the more up-to-date and progressive spirits in our own land are gradually assimilating the many processes which have been, and still are being, perfected for putting work on zinc or aluminium plates, and are doing much to hold their own.

With reference to processes, as the old saying goes, "of the making of books there is no end," so one might say with perfect truth to-day, "of the introduction of new processes there is no lack," and although they are obviously not within my lecture to-night, yet as offset machine makers we welcome them all.

The inspiration for the zeal in this direction has been largely brought about, in my opinion, by the superior printing qualities of the offset process.

I have it on the best authority, from experts in lithographic and offset printing, that whatever you can put upon zinc plates the offset machine will print perfectly, and they see

A Tremendous Future For It.

For the faithful reproduction of old masters, for instance, in my opinion the offset process has no equal. Given the same length of time, experience and ability, which has been applied to the tri-colour process, in my opinion the offset process will prove superior.

For the reproduction of water colour drawings, so as to almost deceive the experts, the offset process is doing wonderful things, one of the main advantages being of course that the rubber will print on exactly the same paper as used by the artist himself.

There is no question at all that the tri-colour process has for a great many years robbed the lithographer of a large amount of work which originally belonged to him, and the offset process has come to his rescue, I believe, to enable him to at least hold his own again. But I am not here to-night setting class against class, but in an impartial spirit to point out to the letterpress printers that in offset machines they have a very valuable adjunct to their letterpress plant.

I can tell you of many houses who to-day are doing economically and with profit to themselves, every-day "bread and butter" jobs—as one might term them—(work which has hitherto been done on their letterpress machines) on their rotary offset machines.

The work I refer to, of course, is of the jobbing duplicate character, such as circulars, headings, order forms, and advertising matter of all kinds, where the subject matter can be set up and then transfers pulled from this and laid upon the plate for the offset machine up to any required number.

You then bring your plate to the offset machine, and beyond setting your ink and water, and getting your lay, there is nothing else to be done before commencing printing.

Make ready, as understood by the letterpress printer, is done away with entirely. You can easily see where the economy comes in, not only in this way, but also where you have half-tone work to be done. No electros or stereos are required, the transfer being simply taken from the original block or photographed on the plate itself, and the stock of type you need carry can be very substantially reduced.

Of course the argument may be brought forward that instead of making ready you have the cost of transferring, etc., but I would point out that the plate can be prepared away from the machine itself so that an expensive machine is not kept standing idle whilst the transferring is being done, this giving you so many more working hours per week for the running of your machine, and of course, gentlemen, profit is being made whilst the machine is actually printing, because you are then actually producing the commodity for which your customer pays.

To those of you who are lithographers, despite the detractions which you hear concerning the offset process, believe me it is

Your Best Friend.

To those of you who are letterpress men—look into the merits of the offset process with an open mind.

I speak sincerely when I say you will find very much that you can use with advantage in your business, and as one who has at heart the true welfare of the reproductive arts just as much as you printers have, although my energies find a different expression to yours—I venture the humble opinion that real progress is only made and the utmost benefits derived from what is undoubtedly a remarkable process, when the energies, the abilities, and the inventive qualities of the lithographer and typographer, and also including the process worker, are applied collectively and in combination, for therein is strength. I want to give you ample opportunity for asking questions if you desire so to do, and I therefore leave it at that.

I have omitted to touch on many things I would like to have mentioned, and the subject is such a vast and fascinating one that I could talk shop with you all night, but, if what I have said has helped you to understand this subject better, then I am satisfied.

One last word, with reference to the samples shown around. I don't want you to think that they represent the last word in—what shall I call it—I am tired of saying offset printing or offset process. I will coin a word, *i.e.*, "Offsetography."

I have picked out of our huge collection of samples what I thought would be of the greatest interest to show you that offset machinery is tackling successfully to-day not only the highest class of commercial and colour work, but the commonest as well.

And the great majority of them are not what I would call manufactured samples, but work turned out in an every-day competitive manner. What I want to bring home to the members is that Offsetography is

Digitized by Google

just as successful in dealing with every-day common or garden work as in printing the 14-colour chromo job from Milan or this rainbow-tinted Austrian Bank Note.

Offsetography, or the art of printing from rubber, although it has accomplished many remarkable things, is only in its infancy, and I commend it to you, gentlemen, as worthy of your earnest consideration.

Particularly with regard to half-tone work, only a commencement has been made, but to a certain extent the engineer has now to await the next step, for his machine is as near perfect as it can be made, and he looks with confidence to you and others I have mentioned for that move.

DISCUSSION.

The CHAIRMAN, in opening a discussion, said that those of them who knew a little about offset printing knew a little more now, and those of them who flattered themselves that they knew a lot probably had learned something also. His impression of the offset process was that it was very limited—speaking as a practical letterpress printer—in so far as its application to letterpress was concerned. He had never yet seen anything produced on an offset machine which had not had a somewhat flat appearance, and when type was introduced, it had been flatter still. He did not think it compared with letterpress process work, but he did marvel sometimes at what had been possible by the offset method with the paper on which some of the half-tone work had been printed. The detail was more brought out, but still there was that flatness present. To the lithographer it had no doubt been a great boon. It had helped him commercially, and he was able to do more now than he could on the old flat-bed presses. He invited the members to put any questions they wished to Mr. Heywood.

Mr. KEATS asked, in the case of the two-colour or perfecting rotary, when they were printing red and black, how they prevented the red being deposited on the black plate, or the black on the red plate.

Mr. GYNGELL, referring to the lecturer's statement about the saving in ink by the offset process, said that while he was prepared to say they saved about 10 or 15 per cent. in the quantity used, at the same time they had to pay a little more for the ink to get the required density for working on the rubber in order to obtain a good result.

Mr. AMER asked how Mr. Heywood proposed to overcome the offset in perfecting.

Mr. MAISEY said they had heard the lecturer speak in glowing terms of what it was possible to do with the offset printing machine, but was there any evidence to show how they could print, by an offset machine, blocks equally as well as were printed in such papers as *Country Life* or the *Engineer*.

The LECTURER, in reply, said, with reference to the chairman's remarks, he admitted that the offset process was limited as regarded letterpress printing. He never for a moment claimed that it was going to entirely supersede letterpress machines. Some enthusiasts said letterpress was dead; he did not say that for a moment. What he said was that the offset process was a very valuable adjunct to the letterpress printer. With regard to the flat appearance complained of, he admitted the chairman's criticisms somewhat, but he also said in his lecture that, given the same amount of experience, ability and time that half-tone or tri-colour work had had, then his point was that offset would approach very nearly to what letterpress would do in that line. He did not say it would, but very possibly it would. As regarded the flatness, his artistic friends called it artistic and soft, and naturally he would prefer that interpretation. (Laughter.) But of course letterpress printing depended entirely on its handling.

Having pointed to a specimen of an offset catalogue produced three or four years ago by one of the members of the Association, which, he said, would compare with any other matter, the lecturer remarked that offset printing was of course limited, but a tremendous lot depended on "the man behind the gun" every time. If they examined the specimens before them critically, especially some of the half-tone ones, the appearance of flatness would disappear, and they would admire their appearance.

With reference to Mr. Keats' question as to whether the red rollers, in the two-colour and perfecting machines, get on to the black plate and *vice versa*, he apologised for having omitted to mention that the red rollers lift when the black plate comes round, and *vice versa*.

He admitted what Mr. Gyngell had said about the saving in ink and paying more for it to get the required density, but when they used, say, only half or a quarter the quantity, or only one-tenth, they had got something up their sleeve to play with as regarded the price. There was a tremendous difference. As an illustration, a printer who had always used 10 lbs. of red for a twenty-ream run, put down a quad demy offset machine, and the minder worked the same with only 1½ lbs. of ink. The overseer thought the minder had made a mistake, but on checking it he found it was quite correct. With experience—and the practical lithographer would bear him out—the ordinary everyday ink which they used could be used for the offset machine, and give them the desired result, the only difference being that they manipulated it in a different manner.

Mr. Amer had spoken of the offset difficulty in perfecting. He presumed he meant the set-off difficulty. He (the lecturer) had said that the front and the back sheet were printed simultaneously. The top side cylinder printed one and the bottom printed the other, and so they were printed at the same moment. It was not like the letterpress printing machine, which just prints one side and then turns the paper over and prints the other side. There was no question of set-off at all in the offset machine because it did not arise.

In answer to Mr. Maisey, he said straight away that the offset process would not print like the illustrations he referred to. Again, he fell back upon what he had said, that the offset process was an adjunct to the letterpress printer. There was a desire unquestionably on the part of the general public to get away from art paper on account of its glaze and the tendency of the leaves to stick together. He thought the offset process came in here. As it was perfected—and every day people were applying their brains to that end—so illustrations would be printed on paper which had not that glazed surface which was so objectionable. Again, they got lighter paper. While not intended to print in the manner of the illustrations in *Country Life*, the offset process performed valuable functions in a different direction.

The CHAIRMAN said they were much indebted to Mr. Heywood for the lucid manner in which he had described the offset process and replied to questions, and he asked Mr. Seeley to propose and the Secretary to second a vote of thanks to him.

Mr. F. W. SEELEY said it gave him great pleasure to propose a vote of thanks to Mr. Heywood for the very lucid lecture he had given to them. As one who was closely connected with lithography, he felt a great amount of pleasure that the litho section had come forward and given the Association two such interesting lectures as they had had at the last meeting and that night. It was now up to the letterpress side to follow up and see if they could not go one better. A good deal had been said of the limitations of offset printing, and it had been thrown up against it that half-tone work by the offset process did not equal the letterpress half-tone. Naturally it did not. He thought the specimens of half-tone printing exhibited round the walls showed the litho and the letterpress printers what was really capable of being done by offset printing, and that nothing like it had been attempted in the past, or could be attempted, on the ordinary flat-bed machine, either by plate or stone. Looking round the walls at the various classes of specimens shown, he said that rubber offset printing had come to stay and had a great future in front of it. (Applause.)

Mr. E. C. MOYCE heartily seconded the vote of thanks to the lecturer. As a mere letterpress man he could not touch on the technical side of the subject; all in the machine department knew that the commercial overseer must not know anything about that. (Laughter.) He had listened to many lectures in that room, but he had never heard a lecturer place his views before his audience more lucidly than Mr. Heywood had done. They were much indebted to him, therefore, for coming there and giving them the benefit of his knowledge and experience, and also for his kindness in undertaking to give the lecture at such short notice. (Applause.)

Mr. BLENKINS, as a letterpress man, also spoke in support of the vote of thanks, which was cordially carried.

Mr. HEYWOOD, in replying, thanked the Secretary for the able way in which he had arranged for the lantern, and the meeting ended, many members prolonging their stay in order to examine the specimens and discuss the subject with the lecturer.

Books Exported from United KINGDOM.

The following figures give an idea of the trade in printed books:—

	October		Jan.-Oct.	
	cwts.	£	cwts.	£
1913	46,121	280,139	385,908	2,278,193
1912	50,105	303,646	389,539	2,303,369
1911	47,002	302,428	357,788	2,252,065

Stationery Exports.

The following are the exports of stationery, other than paper, from the United Kingdom for the month of October, compared with the corresponding month of the two previous years:—

	1911.	1912.	1913.
To Germany ...	£9,705	£12,978	£12,462
„ France... ...	4,469	4,159	4,387
„ United States of America...	9,445	11,749	11,792
„ British India...	25,461	28,242	24,836
„ Straits Settlements ...	2,849	3,785	5,426
„ Ceylon ...	2,778	3,525	2,829
„ Australia ...	25,833	27,578	27,022
„ New Zealand	9,453	9,467	6,762
„ Canada ...	10,355	11,518	13,312
„ Other Countries... ...	95,051	104,899	107,234
Totals	£195,399	£217,892	£216,062

For the ten months, ending October, the total exports reached £1,636,922, an increase of £71,283 over the same period of 1912, and an increase of £246,774 over the corresponding period of 1911.

"WINTER'S PIE."—Although 25,000 extra copies of *Winter's Pie* were printed this year, the publisher had not a single copy left on the day of publication. The same evening several of the bookstalls at the great railway termini had practically disposed of their available supply and no reprint is possible.

Strong, Hanbury and Co., Ltd.,

Printers' Managers and Overseers ASSOCIATION.

NORTH MIDLANDS CENTRE.

The Association's Future Policy.

A special meeting was held at the Albert Hotel, Nottingham, on Saturday, 8th inst., to consider the Report of the Special Committee on "Future Policy."

Mr. C. BUDDEN (president) took the chair at 7 p.m., and introduced the subject in brief and chosen words of earnestness. It was a strictly business gathering, he explained, at which the rules and principles governing the future activities and progress of the P. M. and O. A. were to some extent in the melting pot. The Council had requested their vice-president, Mr. A. E. Moore, to handle the case in their behalf, and from what they knew of his thoroughness and earnestness in the cause he felt sure they would have the matter placed before them in such a manner as would materially help them in their decisions He asked for their careful attention, and called upon the speaker.

Mr. A. E. MOORE said: I should like first of all to propose: "That a hearty vote of thanks be accorded to the members of the Special Committee on Future Policy for the splendid work they have performed on behalf of the Association."

Criticisms and Suggestions by the Vice-President.

This having been seconded, and carried unanimously,

Mr. Moore, continuing, said: Our Association is a splendid movement of which I am sure we are all proud. Let there be no mistake about that. The Future Policy discussions are to cement our interests and improve our possibilities. Those members who have followed the discussions on Future Policy, as reported in the *British and Colonial Printer and Stationer*, will perhaps have noticed that several speakers have been having some amusement at the expense of the North Midland Centre; *some* have understood and supported our recommendation on the Death Benefit clause. Anyhow, it stands incorporated in a modified form in the adopted report of the Parent Association—I believe, the *only* suggestion accepted from a provincial centre.

The study of the Committee's suggestions, with the adopted report placed before you, discloses some anomalies in our constitution. The two reports do not entirely agree, and the provincial centres are really only asked to consider such suggestions as the London meeting has decided to accept. The paper before you contains paragraphs numbered in the original report as 6, 7, 8, 12, 13, 14, 16, 17, 18, 20, 21, 24, 27, 29, 31, 33, 34 and 37, so that suggestions 10, 25 and 35 have been deleted and others altered without reference to the provinces. (Other missing numbers are Committee's comments.)

The Manchester Centre are recommending a *National Council* to deal with *Policy*, so they have evidently had similar experiences and desire firmer ground. In the London Circular, dated September 2nd, page 6, a Revision of Rules Committee has already been appointed by the London members and composed of London members only, and it might help the Manchester proposal if the North Midlands Centre—with the modesty due to itself—respectfully enquires if the "Future Policy" is to eliminate provincial representation in such important matters. It may be said that standing rule 24 supports the present action, but I submit that with the separating of the accounts (par. 20) and the delicate apportioning of balances now in hand, a new situation is created which requires a more direct representation from provincial centres.

Paragraphs 6, 7, 8, 12, 13, 14, 16, 17, 18, 21, 34 and 37, apply primarily to London and may be passed *nem. con.*, unless we with Manchester ask—How are the officers' salaries to be apportioned, and support their idea of a National Council for the Imperial Funds, etc.

Paragraph 20 should obtain the unanimous support of the members. The pooling of the benefit funds is a principle so self-evidently just that one wonders how it could ever have been otherwise. Yet we must not overlook the fact that it may mean a re-adjustment of article 6 if the extra payment per member is to reach the pool.

This brings us to paragraph 24 proposing 2s. advance in subscriptions with a proportion to Unemployment Benefit and Benevolent Fund. Here again Manchester propose 1s. to Benevolent Fund, and 1s. to own centre. I feel that whatever sums are centrally pooled should be in the care of a National Committee, though I have some doubt as to whether the present moment is opportune for raising additional calls upon the members.

Paragraph 27 must be taken to apply strictly to the local funds of the Parent body if it is to convey any meaning; otherwise the pooled funds should be protected by the powers of the proposed National Council or a ballot of the whole Association.

Paragraph 29 refers to a kindly consideration for the older member *in necessitous times*, according to speeches made in debate, but there is no qualification of this kind in the wording, and may lead to trouble in practice unless made more clear.

Suggestion 31—or as I may term it—"Our Suggestion," raised the Death Benefit to members up to 50 years of age. I am pleased to see it was well discussed, well attacked, and well defended—as it deserved to be. My only regret was not to have been present to have advocated the North Midlands point of view. Some opponents had gone for the suggestion tooth and nail, because of expense or because the Association couldn't afford to be generous. Such observations were wide of the mark. What we asked for, and I hope will continue to ask for—is the application of *every rule* and *every benefit* to *every member in proportion to his status*. It is not a case of begging doles or favours. We ask the Association to be broad in its principles, considerate to every member who joins, believing him to have accepted their motto of "mutual help and good fellowship," in good faith. The penalties of age overtake all quite soon enough without their being made an excuse for ostracism in the P. M. and O. A. For over fourteen years there was no age limit at all in this Fund, yet no calamity overtook it. To-day with a safe sliding scale it is working admirably and raising much more money than is required. We ask that under the same safeguards the benefits be extended to every member, and the best criticisms advanced by opponents is that in certain quarters there may be a few old men who will see an advantage to be gained and take it. If the argument were true the position taken up would be too paltry for words, but it is not true, for a sliding scale makes everybody's claim and liability proportionate and the member's age doesn't affect the situation. *There is a danger* in the proposal to augment Unemployment and Benevolent pay, under suggestion 24, open alike to old or young to come in and take advantage of, but the Parent Body were so engrossed with "Pension" matters that they passed the other part without a murmur, and so created the danger they fear.

Suggestion 33 brings my review to an end. It is "that a combined meeting of the Association be held every Whitsuntide at each Centre in turn." A national council might do it—the Association never. The only feasible move would be a Council on the Friday at the same Centre as the summer outing is arranged for on the Saturday.

The words "each Centre in turn" means throwing much more expense on the provinces than upon London, because of the disproportion of numbers. Would the decisions of a meeting, say, in Edinburgh be binding upon the London members whose representatives at the meeting might be in a minority?

Views and Resolutions.

Items 6, 7, 8, 12, 13, 14, 16, 17, 18, 21, 34 and 37 were agreed to on the proposition of Mr. A. E. MOORE (vice-president), seconded by Mr. C. HOLLINGSWORTH—on the supposition that Provincial Centres are not affected in their elections, etc.

Items 20 and 24 were agreed to, "subject to the suggestion that some control of these funds be given to Provincial Centres." Proposed by Mr. A. E. MOORE (Nottingham), seconded by Mr. J. OLDHAM (Loughborough).

It was further proposed by Mr. J. T. WELLS (secretary), seconded by Mr. A. E. HUDSON (Mansfield)—"That the original suggestion of 16s. subscription, including the Pension Scheme, is the better proposal, and should be recommended," but the President pointed out that pension matters had been deleted from the report.

With regard to Item 27, Mr. A. E. HUDSON proposed, and Mr. H. W. EVERARD seconded, "That consent to this proposal be governed by the question: 'How does this affect the Provincial Centres' contributions, and in what manner will their consent be obtained?'"

Item 29.—Mr. T. BARRADELL, Derby, proposed, and Mr. A. MANN, Nottingham, seconded, "That the word 'National' be inserted before the word 'Council' in the third line of paragraph."

Item 31.—It was proposed by Mr. J. T. WELLS, and seconded by Mr. W. LONGSTER, "That retrospective payment should carry with it retrospective benefit, and members paying up subscriptions should be entitled to the present payments of £30 and £15, not £20 and £10 as given in the Report." It was also proposed by Mr. A. E. MOORE, and seconded by Mr. G. Low, "That with the brilliant success of the Association before us, and 'mutual help and good fellowship' as our motto, this Centre appeals to the whole body of the Association to put its professions into full operation by opening the death benefit to all managers and overseers who join the movement, being convinced that the principle can be put into operation, *upon a sliding scale*, without any increase in liability."

In respect to Item 33, it was proposed by Mr. C. G. BUDDEN (President), and seconded by Mr. H. W. EVERARD, "That this proposal should carry with it the formation of a National Council on the lines suggested by the Manchester Centre, and apply particularly to that Council." The Manchester suggestion was:—"That a National Council be formed of representatives from each Centre, the representation consisting of the President and Secretary of each Centre, with an additional member for each fifty, or its fraction, beyond the first fifty members." "That this proposal has the hearty support of the North Midlands Centre, subject to a proviso that where the President and Secretary are unable to attend, two members of the Council may be elected to represent them."

A special vote of thanks to the Vice-President for his analytical notes concluded the meeting.

The Linotype in Libraries.

A representative of Linotype and Machinery Ltd., who has been visiting the United States, supplies us with the following interesting information regarding two of the great libraries in that country. The visitor found in the New York Public Library what he considered to be a really model printing plant. It is a great up-to-date printing office in miniature. There are several platen presses, but only one rotary and one cylinder press in its press-room. Its bindery is complete in every detail, and its composing-room is equipped with five Multiple-Magazine Linotypes upon which 90 per cent. of its catalogue, book, record cards, and miscellaneous work is composed. The Director of the Library, in drawing up the specifications covering the equipment of the printing plant with his superintendent, insisted that Linotypes exclusively should be supplied, not only because of the quality of the work demanded, but because of the time and labour saved in the handling of Linotype bars and the making-up of the forms. Indeed, he says, it has been found among the four great libraries in the United States, which are operating their own printing plants, that the intricate composition called for in their catalogues can be most effectively and economically produced on the Linotype.

The printing office in the Congressional Library in Washington was also visited. It is under the control of the Government Printing Office, and is rated as a branch of that larger institution. Nothing but work relating directly to the Library is executed, yet the office is one of the most thoroughly equipped, as to detail, of any printing establishment in the world—this compliment having been paid to Mr. Putman, the librarian, by a British printer who visited the Library Printing Office while on a tour of the United States. Forty different languages are used in indexing the record cards. The cards call for the use of many accented letters, superior letters, inferior figures, and special characters of different sizes and styles. The Linotypes here have been equipped to meet any and all demands in this complicated work.

BRITISH Exports & Imports of Printing Type.

The following figures show the exports and imports of printing type into the United Kingdom for the periods mentioned:—

Imports:—

	Oct.		Jan.-Oct.	
	Tons.	£	Tons.	£
1913	11	1,639	57	9,758
1912	4	882	40	7,261
1911	4	884	51	10,320

Exports:—

	Oct.		Jan.-Oct.	
	Tons.	£	Tons.	£
1913	42	7,584	462	78,248
1912	53	8,197	430	62,397
1911	51	6,759	417	64,944

ACCORDING to *Kemp's Mercantile Gazette* there was only one failure in the printing and stationery trades of England and Wales for the week ending Friday, November 7th; the corresponding week in 1912 showed seven.

THE late editor of the *Saturday Review*, Mr. Harold Hodge, was entertained to dinner at the Savoy Hotel on Friday last by the staff and contributors of the *Review*.

Necrology

The Late Mr. Henry Escritt.

The death has taken place at Grantham of a gentleman who for many years has taken an important part in the business life of that town. Mr. Henry Escritt was a typical Yorkshireman who went to Grantham in 1860, fully equipped with a thorough practical knowledge of the printing trade, and for the particulars following we are indebted to the *Grantham Journal*, a paper of which he was proprietor. After arriving in Grantham Mr. Escritt entered into partnership with the late Mr. Joseph Rogers, proprietor of the *Grantham Journal*, becoming sole owner of that paper in 1862. At that time the *Journal* was a four-page sheet of limited circulation. Not many people remember those early days, but a glance at the file copies plainly reveals the infusion of fresh energy and enterprise. The record of Mr. Escritt's career is practically the history of the paper itself. Not only was it enlarged and improved, but its influence was widely extended throughout the countryside. It is interesting to note how eagerly the tradespeople of that time took advantage of its columns as an advertising medium. The business announcements—long or short, closely set or moderately displayed—were practically a trade directory of Grantham fifty years ago. Mr. Escritt, we believe, also established the *Lincoln Journal*, which became a very flourishing concern. He found it, however, difficult to manage so far from the city, and eventually disposed of the property to Lincoln gentlemen. It ultimately became merged into another paper which at present enjoys a large circulation. Under his fostering care and unceasing energy the *Grantham Journal* grew rapidly in popularity, not only on account of its merits as a news sheet, but also because of its strictly impartial attitude on all public questions. The proprietor established a corps of correspondents throughout the district, and by degree its circulation covered not only South Lincolnshire, North Leicestershire, South Notts, but the entire county of Rutland and North Northants, with special agencies at Melton, Bourne, Oakham, and Uppingham. The greater demand for the paper, and the increasing quantity of news to be dealt with week by week necessitated several enlargements, until in 1885 it became absolutely essential to erect a rapid rotary machine, printing from stereotyped plates. In the Diamond Jubilee year of Queen Victoria (1897) he made a gift of the newspaper to his only son, Mr. H. Manners Escritt, most of his own time being taken up with the business of auctioneer, valuer and estate agent, in which he was eminently successful, and went to reside at Bournemouth. In February, 1910, his only son died in very sad circumstances, and the bereavement was a great blow to him. His one desire seemed to be to again acquire possession of the *Journal*, and after negotiations with the executors the property once more became his own. Until quite a recent period he regularly came down to the office at 9 a.m. daily to interview the heads of departments, thus keeping in closest touch with the business. He realised that the time had arrived to bring the composing-room into line with modern requirements. The introduction of typesetting machinery, of course, meant the displacing of a certain amount of hand labour, and Mr. Escritt naturally hesitated a great deal before he adopted a policy which would mean the dismissal of men who had served him faithfully for many years. But he could not help recognising the fact that the *Journal* was practically the only paper within a very wide area that was set by hand compositors, and reluctantly he gave the order for the installation of the latest and most improved pattern of Linotypes. Those who knew him best can bear witness to the fact that the parting with several of his old employees was a great grief to him, and nothing pleased him better than to hear they had obtained other employment. About the same period he resolved to form the *Journal* into a private limited liability company, and this scheme was carried out under his supervision at the end of this year. Possibly the strain of these two important schemes had an adverse effect upon his health. Gradually he became weaker, and passed quietly and painlessly away.

The death is announced of Mr. Ernest Alfieri, a well-known journalist who was editor of *Music* from 1895. He was a lineal descendant of Alfieri, Italy's great dramatic poet.

The death has taken place of Mr. Edward Wildman, printer, of Redcross-street, Liverpool, who was found dead at his business premises. The deceased gentleman was 80 years of age.

Printers' Roller Composition.

The composition manufactured by "The Durable" Printers' Roller Co., Ltd., Charles-street, Hatton-garden, E.C., has long occupied a high position in the estimation of those printers who have used it on their machines, and is in use to-day in all parts of the world where printing machines are to be found, and it answers the requirements of various climates and the conditions of different offices, as well as the varying needs of machines of every grade. To assist printers in deciding upon the proper class of composition to use for their rollers, the firm has just issued a chart giving particulars of the various qualities, which will be sent, together with samples, prices, terms and all other information, on application, and printers interested in getting the best work out of their machines should apply for the same. The company are contractors to H.M. Printing Offices, India Office, Hon. Board of Inland Revenue, and others, for the past thirty years, and have been supplying their roller composition to the trade for forty years. We may add that for nearly thirty years we have used "The Durable" rollers on our own machines, and they have given us the utmost satisfaction.

British Paper in Japan.

The following figures show the exports of British paper to Japan during the last five years:—

1912	188,980 cwts.	£191,794
1911	113,698 ,,	120,854
1910	142,097 ,,	114,084
1909	102,143 ,,	109,103
1908	72,163 ,,	77,647

SCREENS Our "Diamond" Screens for Process Engravers are the best and cheapest high-grade, permanently engraved Screens. In competition with others, they have been chosen by the principal Process Houses. We are actual makers with more than 20 years experience and our prices are lower than others because we sell from our factory to you direct.

Trade Notes.

A NEW quarterly paper, the *Journal of Egyptian Archæology*, is to be published by the Egyptian Exploration Fund. The first number will appear next January.

THE printers of Burnley, Blackburn, Nelson, Accrington and Darwen are agitating for an increase of 3s. 6d. a week, but have been refused. The masters have offered 1s. 6d. a week, and the matter is to be submitted to arbitration.

THE premises of the *Dunfermline Journal* printing works were entered by burglars the other night and a safe in the counting house was opened, a cash box was forced open, and money amounting to about £6, besides a quantity of stamps, stolen.

THE Cleveland Guild of Printers, Lithographers, Bookbinders and Kindred Arts and Crafts, has an excellent syllabus for the winter session, that includes lectures, discussions, practical demonstrations, and visits to printing works, paper mills, etc.

AN excellent concert was given at the Liverpool Press Club on Monday night, under the presidency of Mr. Wallace Coop. The programme, which had been arranged by Mr. E. Stanley Redfern, was sustained by several members of the Hallé Orchestra.

A FIRE broke out last week in a warehouse in the basement of Messrs. William Heinemann's, the publishers, premises in Bedford-street, which contained many thousands of books. The fire was soon got under, but a large number of books were damaged by water.

THE highest award obtainable at the International Graphic Arts Exhibition, Amsterdam—the Diploma of Honour—was given to the L and M Offset Litho Rotary, the L and M Two-Revolution Press, and the L and M Automatic Metal Furnace, manufactured by Messrs. Linotype and Machinery Limited.

ON Saturday last, Mr. Chas. W. Gamble, M.Sc. Tech. (Manchester), Director of the Photography and Printing Crafts Department, lectured on "Colour," before a large assembly of members of the Printing Crafts Guild, in the Municipal School of Technology, Manchester. In his two hours' discourse he intelligently, by demonstrations and lantern slides, showed the usefulness of colour to the printer, and how by means of a special lantern three-colour subjects were obtained.

TIN SIGNS WANTED.—A trader in Montreal wishes to get into touch with United Kingdom makers of tin lithographed or enamelled signs for advertising purposes, plain and in relief. The enquirer, who claims to have received several enquiries for large quantities of these signs, desires to be in a position to have his customers' designs manufactured in large quantities in the United Kingdom. The name and address of the above enquirer may be obtained by United Kingdom manufacturers of the goods mentioned on application to the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall-street, London, E.C.

AT the quarterly meeting of the Edinburgh and East of Scotland District of the Institute of Journalists, held in the City Chambers, Edinburgh, on November 6th, Mr. A. D. Macara presided over a good attendance. Mr. William Bertram Dunbar gave an interesting statement of his first attendance at the Council Conference as a delegate. Mr. Thos. Kemp, J.P., Dalkeith, also dealt with several matters before the Conference. Both gentlemen agreed as to the useful work accomplished by the Institute, and special reference was made to the great service rendered by Mr. Hodgson, the past president, in connection with the bye-laws.

TENDERS WANTED.—For the supply to the Felling Education Committee of books, apparatus, and stationery; tender forms from Mr. R. Hall, Council-buildings, Felling-on-Tyne. For the printing and supply of minute, account, and other books, stationery, etc., for the Carlisle Corporation; particulars may be had at the Town Clerk's Office, Carlisle. For printing for the House Committee of the Queen's Hospital, Birmingham; information from the Secretary. For supply of printing and stationery, for the Salford Guardians; forms of tender may be obtained at the Poor Law Offices, Eccles-new-road, Salford.

MR. JOHN GIBSONE, the general manager of Messrs. Ballantyne, Hanson and Co., printers and bookbinders, Causewayside, Edinburgh, has just completed fifty years' service with the firm, and to mark the event, the employees have presented him with a mahogany clock with side ornaments. Mr. Gibsone started his career with Mr. James Nichol, publisher, Edinburgh, in November, 1863, and that gentleman amalgamating his business with that of the Ballantyne Press in 1870, went with him, and after passing through various positions was appointed general manager in 1893.

SIR ISAAC PITMAN AND SONS have issued a new penny weekly entitled *Pitman's Magazine of Business Education.*

A NEW halfpenny paper has just made its appearance in the *Huddersfield Journal of Entertainments and Sports*, which, as its title suggests, deals largely with theatrical, variety and picture matters.

MESSRS. CH. LORILLEUX AND CO., printing ink manufacturers, of Paris and London, etc., inform us that, commencing from the present month, the firm will be under the joint management of Messrs. Gabriel G. and Pierre C. Lorilleux. The assistant-managership remains in the hands of M. Raoul Hussenot-Lorilleux, with whom, in that post, will in future be associated his son, M. Jos. Hussenot.

BURNISHED LEADS. — The proprietors of Fry's Metal Foundry, 25-30, Holland-street, Blackfriars, London, S.E., announce that they have now an arrangement with Messrs. William Ullmer and Son, Albion-road, Stoke Newington, whereby in the future they will supply that firm's burnished leads to customers, either in lengths or in cut sizes. Orders will be promptly filled and free delivery given in London, country orders of 1 cwt. are also delivered free.

TENDERS ACCEPTED. — For the supply of printing and stationery for the Bermondsey Board of Guardians, C. Knight and Co., Ltd., S. T. Green, Simson and Co., Ltd. For the supply of school stationery and apparatus for the Chorley Education Committee, books, stationery, kindergarten materials, etc., T. Hope, Devonshire Works, Ardwick, Manchester; needlework materials, J. Crowther, Market-street, Chorley. For the supply of the school requirements for the Dover Education Committee (schedule A, books, etc.; B, stationery; C, needlework), Arnold and Co., A and B; and Leighton, Baldwin and Co., C. For the supply of tramway tickets and the hire of punches for the Cardiff Corporation, Bell Punch and Printing Co., Tabernacle-street, London.

LEATHER BOARD. — A patent has been granted to the Hideite Leather Co., in which the shredded leather stock for leather-board is mixed with a cellulose compound to render it waterproof, firm, pliable, and capable of taking a finish suitable for covers, etc. In one method, three per cent. sulphuric or hydrochloric acid is added to 400 lb. of cellulose of any kind in sufficient quantity to cover it, say 800 to 1,000 lb., preferably in the presence of heat. To the resulting paste, a chrome salt, preferably 100 to 300 lb. of bichromate of soda, is added, and the compound is thoroughly mixed with 1,200 lb. of leather stock which has been separately shredded in a beater. In another method, 300 lb. of cellulose are converted into hydrocellulose by treatment with acid, and an emulsion is added containing 50 lb. of mineral oil, 75 lb. of resin, 25 lb. of fatty acid such as red oil, and 25 lb. of soda ash with water to render it sufficiently fluid. A precipitant such as ammonium sulphate is added, and the resulting mass is thrown into 1,200 lb. of leather stock in the beating-machine.

LORD NORTHCLIFFE presided at the first festival banquet of the National Advertising Society and General Benefit and Benevolent Institution, held on Thursday evening last, at the Hotel Cecil, and in the course of an interesting address said that it was estimated that 100,000 persons were connected with advertising in this country. Speaking of the science itself, he said there was nothing new about advertising, and cited the case of Rameses, who stamped his mark on the national monuments of Egypt. The Normans, who duplicated castles throughout England, were also publishing the fact of power. Science was developing publicity just as it was improving agriculture, and King Charles's advertisement in the *London Gazette* for his lost dog—one of the earliest English announcements—had been developed into newspaper advertising in which specialists, writers and artists of the highest talents were engaged. Advertising was certainly attracting the world's best brains. The idea that advertising was merely a method of puffing the pinchbeck and the catchpenny had long passed, and only the best ideas and the best manufactures would stand the test of advertising.

WHAT HAPPENED TO JONES.—"I see you have a new man making up the classified advertisement page?" said the visitor, to the composing-room. "Yes," answered the foreman. "What became of Jones who had the job?" asked the visitor. "Oh!" replied the foreman. "We had to let him go. Jones was a good man but he got rattled in the rush the other night and put the advertisement of an undertaker under 'Amusements.'"

SPECIAL PREPAID ADVERTISEMENTS.

SITUATIONS.—Charges for Advertisements under the headings "Situations Vacant," or "Situations Wanted," are at the rate of

ONE SHILLING FOR 24 WORDS

(3 Insertions: TWO SHILLINGS),

and Fourpence for each additional Eight Words. Minimum Charge, One Shilling.

ADVERTISERS, by paying an extra fee of Sixpence, can have the replies addressed to the "British and Colonial Printer and Stationer" Office under a number, and such replies will then be forwarded post free.

PAYMENTS must be made in advance, except where the Advertiser has a running account, in which case the cost can be debited thereto.

STONHILL & GILLIS, 58, Shoe Lane, London, E.C.

Situations Vacant.

YOUTH (age about 19 to 21), with some experience of Printing and Allied Trades, required by Printers' Supply House, with a view to training as Salesman; exceptional opening for reliable youth. —Apply, in own handwriting, stating experience, to S. W., No. 13,280, Office of the BRITISH AND COLONIAL PRINTER AND STATIONER, 58, Shoe-lane, London, E.C. 13280

Situations Wanted.

STATIONERY.—Energetic young Man, with wide indoor experience of Account Books, Litho, and General Stationery, seeks position as TRAVELLER with large Manufacturing Firm. —Address, No. 13276, Office of the BRITISH AND COLONIAL PRINTER AND STATIONER, 58, Shoe-lane, London, E.C. 13276

Businesses for Sale.

DISSOLUTION OF PARTNERSHIP.—Trade Litho Business for Sale, London; Plant cost over £3,000, and includes Offset Machines; price, for quick sale, £2,250; a bargain.—Address, No. 13277, Office of the BRITISH AND COLONIAL PRINTER AND STATIONER, 58, Shoe-lane, London, E.C. 13277

PRINTING BUSINESS (established 1812) for Sale; modern plant; turnover about £1,400 per annum; prosperous manufacturing town; price £2,000, including freehold building and cottage.—Apply to H. H. Horsman, 70, Burgoyne-road, Harringay, London, N. 13274

Machinery and Plant for Sale.

ALL ELECTROTYPERS and STEREOTYPERS should write H. Williams and Co. for their latest catalogue of machinery, and Electroline Enamel Paste, for producing fine art stereos. —Engineers, Red Lion Works, Warner-street, Rosebery-avenue, E.C. 12343

Miscellaneous.

LEASE for disposal, with possession, of excellent premises, suit Printers; low rent; price £300; all L.C.C. requirements carried out costing £350; nearest offer accepted.—Address, No. 13278, Office of the BRITISH AND COLONIAL PRINTER AND STATIONER, 58, Shoe-lane, London, E.C. 13278

LONDON AGENCY for Colonial House wanted by a Gentleman with many years' experience of the Printing and Stationery Trade; can devote the whole of his time.—Address, No. 13282, Office of the BRITISH AND COLONIAL PRINTER AND STATIONER, 58, Shoe-lane, London, E.C. 13282

REQUIRED, by an experienced man with an influential connection among Principals and Buyers in the Printing, Stationery and Allied Trades, SOLE AGENCY or Selling Commission for London.—Letters, in the first instance, to No. 13281, Office of the BRITISH AND COLONIAL PRINTER AND STATIONER, 58, Shoe-lane, London, E.C. 13281

TO PRINTERS.—For Sale, cheap, several large Body Founts of new Type, 8-point to 12-point in both O.S. and Modern Faces; portion very slightly used and remainder in founders' packets; specimens and weights on application.—Spottiswoode and Co., Ltd., 5, New-street-square, London, E.C. 13265

TO PRINTERS, PUBLISHERS and ALLIED TRADES.—TO BE LET, as a whole or in Sections, an important Block of Buildings covering an Island Site conveniently situated close to Fleet Street. They contain four well-lighted upper rooms with lofty basement. Total floor space, 12,625 sq. ft.—Rent and further particulars of Messrs. Farebrother, Ellis and Co., 29, Fleet-street, E.C. 13264

Digitized by Google

The Ghent Exhibition.

Some Notes on the Exhibits of Printing and Allied Trades.

The Ghent Exhibition was rather a disappointment to a searcher after new ideas in typography. There are very few exhibits inside those of Belgium and France, as the German and English sections are not trade exhibits at all, but collections of artistic workmanship, to a large extent removed from commercial conditions.

The Belgian section is naturally the most important in the Exhibition, and we will start with a description of the principal exhibits in the printing and kindred trades staged in the Belgian pavilion.

The Société Anonyme des Papeteries de Saventhen have a large show of paper of all kinds and for all purposes from news to to wall-paper, and in the same section is a collective exhibit showing all varieties of stationery and box-making. The Société Belge de l'Ondulum have specimens on view of their corrugated paper and boards for box-making.

The only type foundry exhibiting is the firm of Van Loey-Nouris, of Brussels, who have an interesting collection of types and rules. They specially emphasise their hard metal.

The machines shown were very few. Two Platens, of the Dressdner Schnell-Pressen Fabrik, a "Margeur-Automatique," by Schroeder, Spiess and Co., of Leipzic. An offset litho machine by the same firm, a mammoth Reliance hand press with a 6-foot handle, and the Lanston Monotype, complete the list.

Turning to the specimens shown, photo-engravings are exhibited by Mangnoy and fils, of Antwerp, Dietrich and Co., of Brussels, whose reproductions are excellent, and J. Malvaux, whose two-colour work is quite good, and a four-colour reproduction of a Detaille picture quite equal to the best German work.

Very little chromo-lithography is to be seen. The best work is shown by J. G. Goffart, of Brussels, whose natural history work is very good, and by J. E. Goossens, who specialises in commercial work, but has done some reproductions of miniature paintings which are really excellent.

The Letterpress Section is the largest, and here we find a tolerably representative collection of Belgian printing on view. Among ordinary printers showing good sound work without an overplus of new ideas, may be noted F. and R. Büyck, who are official printers; J. E. Goossens, whose litho work has been already mentioned; and De Rüjker and Mendel, whose commercial booklets are worth notice. The art printers, whose work inclines to the German or Flemish style are Vroonant and Cie., of Brussels, and the Maison d'Edition, of Ghent, both of whom show good bookwork. On the other hand C. van Oest, of Brussels, the principal publisher of art books in Belgium, inclines towards the French style, and his books might well have the Paris imprint. Remy Havermans, also of Brussels, belong to this school, but are striking out new ideas for themselves.

The publishers of Belgium have a collective exhibit, to which all the Ghent firms and many of those at Brussels contribute.

The Société Royale Belge de Géographie has placed on exhibition a very interesting collection of old atlases and ancient and modern maps, showing the development of geographical research.

In the French pavilion the most striking exhibit is that of the French publishers, such as Baillière, Hachette, Colin, Larousse, etc., etc. each of whom has a large stand filled with their recent publications.

The Imprimerie Nationale shows a collection of books printed at their Press from the seventeenth century to the present day, and also a special series of letterpress designs in colour, produced for the purpose of exhibiting. The only other French printer showing is C. Herissey, of Evreux, who has some very good, work in a style which shows appreciation of recent developments in printing outside France. Lefranc, of Paris, and Detourbe, also of Paris, the printing inkmakers, are the only exhibitors in their line.

Machines are shown by Alauzet, of Paris, who have a flat-bed perfecting machine at work, and by Marinoni, whose machines are staged and in use by F. and R. Büyck, of Ghent. Two are shown—one a large litho flat-bed and the other a letterpress flat-bed perfector.

There is also on view the Orsoni stencilling machine, which is used to put flat colours on fashion plates and cheap coloured journals after printing. Water colours are used, the brushes take their ink from rollers, and have a lateral action as well as a continuous one. Two brushes are used to each colour.

The German collection is housed in one of those strikingly artistic buildings that we have come to look for at international exhibitions. There appear to be only two private exhibitors, the *Frankfurter Zeitung* and the *Hamburger Fremdenblatt*, both displaying methods of producing machine photogravures, and the resulting prints. Both papers use the rotary machines coupled up to the ordinary newspaper press.

A general collection of recent German books illustrates modern German book production

The most effective show from our point of view is that organised by the Deutsches Museum für Kunst in Handel und Gewerbe. A large collection of recent sheets of type specimens, and specimens of job printing, have been mounted on sheets of dark brown cover paper and ranged round the walls. From this it is easy to get an idea of modern German style, both of type and work. A collection of recent posters is arranged as a frieze below the cornice.

The one exhibit in the English machinery section is that of Linotype and Machinery, Ltd., who have staged a three-magazine Lino, a Centurette, and an L. and M. Offset, as well as their other specialities.

The great strength of the English exhibit is in the Arts and Crafts section, where there are many books and prints. These, however, have been fully described in our issue for September 18th last.

THE late Mr. Edward Holden, of Messrs. Isaac Holden and Sons, Ltd., of Bradford, formerly proprietor of the *Liverpool and Southport Daily News*, has left estate valued at £72,788 gross.

Technical Education in Australia.

THE need of technical education for the young printer is being felt in our Colonies as well as in the Mother Country, where the problem of training the young idea in the technicalities of the trade is being solved by well-equipped schools in nearly every large town and city. In Australia the employers are experiencing difficulties in securing a suitable number of apprentices, and having secured them, in how to train them suitably so that they may turn out competent and reliable workmen. An Australian workman, especially in the newer settlements, must possess resourcefulness and the power to adapt himself to the means at his disposal, having the faculty of ingenuity and the genius to contrive; there is no typefoundry close at hand, no printers' supply house where any material or device can be obtained at a moment's notice, and so he must be a man that can turn his hand to almost anything and evolve material from the most unpromising items of existing plant. A good start has, however, been made in the larger Australian cities and the fine technical schools of Sydney, Melbourne, and Adelaide provide excellent means for educating the youth of the Commonwealth who desire to be good printers. Unfortunately the printing trade is not benefitting so much as it ought from the provision made for instruction, for a writer in the *Australian Printer* says that:—"There is an apparent disinclination on the part of apprentices to avail themselves of the opportunity to improve their knowledge of both the theory and the practice of their trade. That an improvement is needed is very apparent from the class of men who seek positions as journeymen. Not that all are indifferent workmen, but a very large proportion of them are—they lack the artistic temperament so necessary in the printing of to-day; they are lethargic in their movements; they need system in their work; there is a great want of originality and initiative in all they do; and in some instances there is an objection, even to resentment, at being told how their work should be done in order to save time and produce the best results at the least cost." The same evils are apparent to a certain extent in some of our home schools, but that need not discourage us in the good work of technical instruction, for there are black sheep in every fold. Some youths do not grasp the importance of gaining knowledge, but the majority of the lads are really anxious to improve themselves, and a considerable proportion of them turn out capable workmen, while many rise to posts that command a respectable salary.

* * *

An "Open Price Policy."

IN the olden days when buyer and seller met in the market place to exchange wares, craftsman bargained with tradesman; farmer haggled with housewife; foreign trader vied with native merchant, it was a battle royal of wits, for no one expected to quote or to be named the correct selling price. Merchandise, if it were priced at all, had a cost mark in cipher, and the best salesman was the man who could make the most profit on that cost. In these latter days, however, bargaining has taken on another complexion, but the customer still endeavours to best the seller, if he can. So estimates are asked for, and when got they are taken round to others in the same line of business, and endeavours are made to get the first low price quoted cut down still lower. To prevent this method of cutting down the seller's profits being practised with impunity an "open price policy" has been adopted by the Kansas City Printers' Association. Under the provisions of the "open price policy," not only will bids on all work be made known to the trade, but investigation into the bids will be actually courted. The "open price policy," a distinct innovation in the printing trade, has been tried and found not wanting in other lines. The committee adopted the "open price policy" on the following basis: "That each member of the organisation, upon giving a price on any order to a customer who takes the price away from the office, should call the central office, giving a description of the job and the price bid, reserving the right to change his bid when desired, and that special blanks be prepared by the central office to register these bids, and that the central office be authorised to furnish to any member of the organisation, upon call, the name of the customer, the description of the job, the price bid, and the name of the bidder. That, in addition to the other provisions of this resolution, each bid be stamped as follows: 'This estimate is registered with the central association.'" We believe something of this kind has been tried in a provincial town in this country, and that it has been successful in discounting the methods of the would be price cutter.

* * *

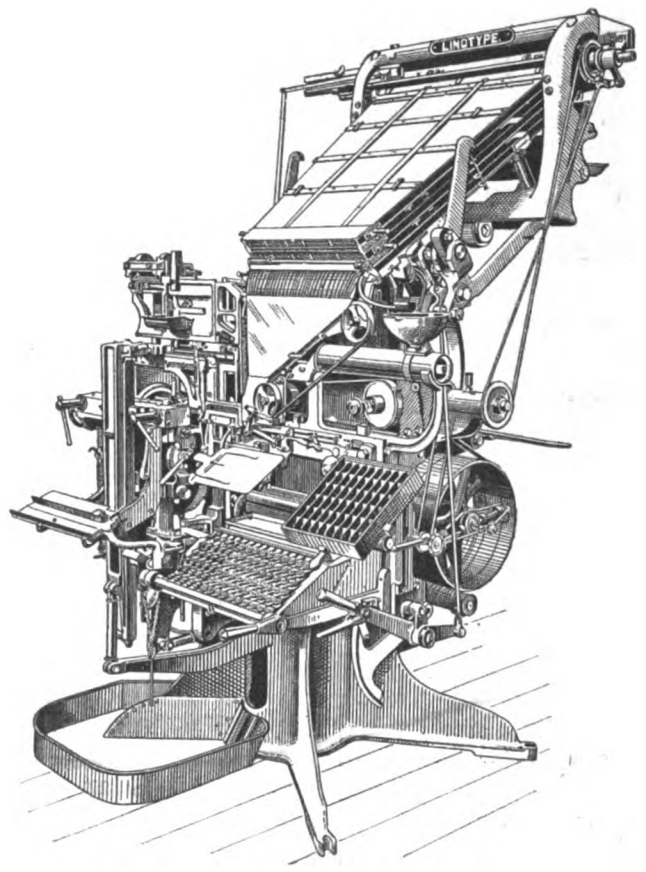
The Paper Industry.

BRITISH paper mills could do with more orders at the present moment, as there is an apparent dullness which must be got over very quickly. But this dullness of trade in our industry appears to be very general. The paper trade of Norway is reported to be in a

Digitized by Google

badly depressed condition, and papermakers experience difficulty in disposing of their output at anything like remunerative prices. In Sweden the effects of the depression are also felt. The Canadians are talking of raising their prices as a result of the United States tariff. One papermaker at Ottawa has said: "Canadian paper companies are not making the money people think. It is costing about as much now with present prices to lay down paper f.o.b. as it is worth, and prices will have to go up, that's all." The Germans are also complaining bitterly, whilst in America the situation in the paper industry is gradually improving, though it has not yet reached the point that was expected immediately following the enacting of the new tariff. Many of the mills report plenty of orders on hand, and with the improved water conditions it is unlikely that they will suffer for some time to come. All lines are gradually picking up, and it is expected that the remaining months of the year will record a very good volume of business. Though trading compares favourably with corresponding periods of previous years, there is still room for improvement. Jobbers' stocks are low now, as they have been holding off for so long, and it is only a question of a short time before they will have to begin anticipating their wants.

* * *



The Japanese Paper Industry.

The paper industry in Japan seems to be making good headway on the whole. This is attributable to the growing demand within and harmony that now exists among the manufacturers, who, hitherto, have had a setback in consequence of the lack of understanding and cohesion among themselves. In order to meet the new situation that has arisen paper mills are being expanded and equipped in an up-to-date style. British papermakers should take note of the increased demand for paper in Japan and see that the requirements of that market—and the Chinese, which are about similar—are properly studied. Other nations are studying them. Therefore, we may do the same, because we are not behind other countries in equipment. Cheap imported printings we are told, have keen competition with the output of the local mills. Then the import duty is to be contended with, but looking at things broadly we believe that for high-class papers of all sorts a demand will be found in Japan. The Oji paper mill is one of the most successful concerns in the country, and the net profits for the first six months of the year are reported to be equal to £56,000.

The index and title-page to Volume seventy-two of the *British and Colonial Printer and Stationer* is now ready, and it being contrary to postal regulations to enclose it as a supplement to our usual weekly issue, a copy will be sent to any reader desiring it on receipt of a penny stamp.

58, SHOE LANE, LONDON, E.C.

WEDNESDAY, NOV. 12th, 1913.

MONEY has kept in sufficient supply for all needs, but there is no surplus. Call loans yesterday were generally arranged at 4 to 4½ per cent., and weekly advances at 4½ per cent. Discount rates remain about the same, the market being firm. Gold movements have resulted in a net influx to date of £178.000, the balance of bar gold purchases by the Bank after the export of £100,000 to Egypt. Stock markets have continued dull, and for the most part inactive. Consols are a shade weaker than a week ago, the quotations being 72½ to 72⅝ for money, and 72 11/16 to 72 13/16 for the December account.

The miscellaneous industrial market has displayed a firm tone this past week, but there is no material increase in the volume of business. In the section relating to paper and print movements have occurred both ways. Amalgamated Press Ord. have fallen ¼, Carl Hentschel Ord. have dropped 1/16, and Ilford Ord.are down 3/32, whilst C.Arthur Pearson Pref. have risen ¼, and Waterlow Bros. and Layton Ord. have gained ¼. Business has been done during the past seven days in Associated Newspapers Pref. at 20s. 7⅓d. and 21s.; in Sir Joseph Causton and Sons Pref. 91s. 3d.; in Carl Hentschel Ord. at 1s. 9d.; in *Illustrated London News* and *Sketch* Pref. at 14s.; in International Linotype at 73 and 70¼; in Kelly's Directories Pref. at 9¾; in Edward Lloyd Pref. at 21s. 6d., 21s. 3d., 21s. 9d. and 21s. 3d.; in C. Arthur Pearson Pref. at 71s. 3d. and 76s. 3d.; in Raphael Tuck and Sons Pref. at 98s. 9d., 101s. 3d., 100s. 7½d., 99s. 4½d., and 98s. 9d., and in the Ord. at 18s. 1½d.; and in Weldons Ord. at 31s. 3d., 30s., and 31s. 3d.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIPS DISSOLVED.

HOUGHON AND BOURDIN, 110, Shaftesbury-avenue, London, W.C., booksellers. November 1st.

NIX AND WATTS, 1, Pilgrim-street, Ludgate-hill, London, E.C., die-sinkers and engravers. Debts by H. Watts, who will in future carry on the business. October 31st.

GROUT, A., WATSON, F. G., and ABBOTT, A. F., trading as The Grout Engraving Co., 7, Bridewell-place, London, E.C., die-sinkers and embossers. Debts by A. Grout and F. . Watson, who will continue to carry on the business at the same address under the old style. November 3rd.

THE BANKRUPTCY ACTS, 1883 AND 1890.

RECEIVING ORDER.

KIRK, J. H., 20, Fawcett-road, Rotherhithe, London, S.E., copper and steel plate printer. Date of order and of adjudication order November 3rd. made on the debtor's own petition. First meeting of creditors November 18th, 11.30 a.m., and public examination of debtor January 16th, 1914, 11.30 a.m., both at Bankruptcy-buildings, Carey-street, W.C.

NOTICES OF DIVIDENDS.

JONES, E. H., 14, Highfield-street, Leicester, stationer and newsagent. First and final dividend of 1s. 4½d. November 21st, at the official receiver's office, 1, Berridge-street, Leicester.

HARTNALL, A. J., The Colonnade, Ryde, Isle of Wight, newspaper proprietor. First dividend 4s. November 15th, at the trustee's office, W.C., Black, Newport, Isle of Wight.

ORDER MADE ON APPLICATION FOR DEBTOR'S DISCHARGE.

BIDDULPH, L. S., 10, Hampton-court-road, Hampton Wick, Middlesex, journalist. Date of order July 29th. Immediate discharge on bankrupt's consent to entry of judgment against him for £50. The grounds named in the order for refusing an absolute order of discharge were proofs of facts mentioned in Section 8, sub-section 3 (A), (B) and (C), Bankruptcy Act, 1883.

ADJUDICATION ANNULLED AND RECEIVING ORDER RESCINDED.

HARDING, S. D., trading as Harding and Son, 14, Kinderton-street, Middlewich, Cheshire, printer. Date of order and of adjudication order May 30th. Date of recession and annulment October 22nd, on the grounds that since the date of the receiving order and the order of adjudication, all debts have been paid in full, together with the costs of all proceedings in this matter.

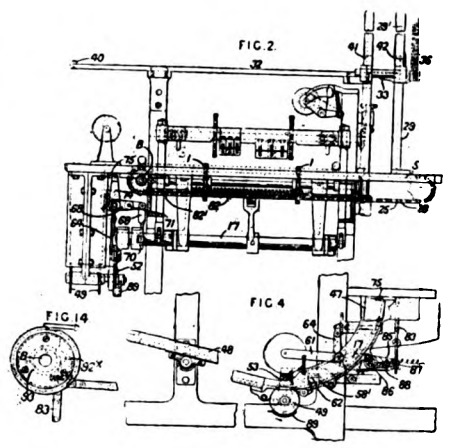
Scottish Bookbinders' Dispute.

The strike in the Scottish bookbinding trade began on Wednesday of last week, when some 70 members of the National Union of Bookbinders and Machine Rulers in the employment of Messrs. Blackie and Son, Ltd., Glasgow, ceased work, and on Saturday practically all the bookbinders in that city were out.

In Edinburgh, too, the men are all out, with the exception of about 30 men whose notices expire to-day. In this city about 130 men are working on the terms demanded by the union. The trouble has arisen over the claim of the men for the exclusion of female and non-apprenticed male labour from the trade by prohibiting the future introduction of more learners. This claim is being strenuously resisted by the employers, who at their last two meetings passed unanimously a resolution to adhere to their refusal. The number of men affected by the dispute in Scotland is about 900.

At a meeting of the Glasgow employers there was a large and representative attendance, and the meeting was unanimous in abiding by the former decision to resist the demands of the Bookbinders and Machine Rulers. At a meeting of the Edinburgh masters it was unanimously decided that the employers should adhere to the position already taken up by them in regard to the employment of women in the shops.

The Aberdeen bookbinders have also come out on strike. In Perth and Dundee the campaign against women workers has been successful, the masters having granted the men's demands, but the Aberdeen employers are resisting strenuously what they regard as unwarrantable concessions.

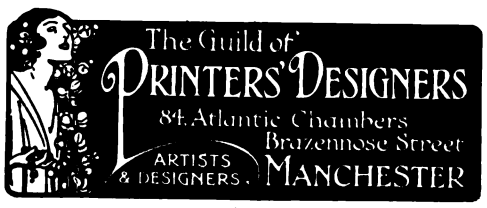


Up till the time of writing both parties in the great centres of Glasgow and Edinburgh are standing firm, and there is no talk of concessions on either side. The Glasgow employees held a meeting on Monday and elected certain of their members to the branch committee, which will act as the strike committee during the dispute. The Glasgow employers have taken no formal step since their meeting last Friday, when they endorsed unanimously the policy which they had taken up previously of resisting the men's demands.

The London Strike.

This dispute still goes on and there is no sign of an end of the struggle. Messrs. Burn's works in Kirby-street are still picketed, and the police are always present in force. This strike is now in its thirteenth week and there is, as yet, no sign of a settlement.

Addressing Machines.



In an addressing machine, the invention of the Montague Mailing Machinery Co., the address plates are fed across the printing position by an intermittently actuated chain 25 from a hopper 29, the upper part 29^1 of which is slidable into position for filling without stopping the machine. The type-plate delivery devices 49 are actuated by mechanism controlled by the height of the pile in the delivery trough 47, and pass the plates into a removable receiving trough 48 by which the hopper 29^1 is refilled. Means for stopping the machine in case an address plate sticks, or when no machine is fed by chains 1, are provided. The address plates travel in a path across the path of magazines, and have depressed margins engaging with grooves in the table 5 to guide the plates. One of the grooves is made sufficiently deep to carry the driving chain 25 which has lugs 28 to engage one margin of each plate, the plates being pressed down on this side by a spring-pressed frame. The chain 25 is driven intermittently through a shaft B on which a

free-wheel clutch 93 is mounted. Round the loose part of this clutch, a chain 82^1 is partly wrapped and attached at the other end to a spring 82. Another chain 83 is wrapped round the loose part in the opposite direction, so that when a lever 85 on the shaft 17, to which the chain is attached, pulls the chain 83 downwards, the spring 82 is extended, but on the upward movement of the chain 83, the spring 82 turns the clutch, and through the pawl 92^x drives the shaft B unless an address plate sticks and thereby prevents the movement of the clutch. In this case, the chain 83 slackens, and allows two portions of the operating lever 85 on the shaft 17 to move relatively to each other at the pivot 86, and close an electric circuit at the contacts 87, 88, by which the machine is stopped. The plates, after the printing operation, are delivered into a curved trough 47, by which the pile is turned from a vertical to an horizontal position. The pile increases in height until the top plate engages a pin 75 oscillated by a lever 74, link 69, and lever 70 on the shaft 17. When this pin 75 is prevented from moving inwards by the presence of a plate, the lower portion of the bell-crank lever 74 bends at 71, and allows an auxiliary arm 68 to lower the link 64. This link lowers an oscillating hook 61 which engages another hook 62 on a lever 58^1 engaging with the ratchet wheel 52 which is thus turned and drives the toothed wheels 49 engaging the edges of the plates, thus moving the horizontal portion of the pile forward and allowing the remainder of the pile to drop. The plates are pushed into a removable receiving trough 48, having spring catches to prevent the plates falling out. To put the toothed wheels 49 out of action, a circular mask 89 may be turned into position to separate the pawl 53 and the ratchet wheel 52. To refill the hopper from the receiving trough, the upper portion 29^1 is slid along the bar 32 to the stop 40. The receiving trough is then passed into the hopper 29^1 until the inclines 41, 42 force the spring catches apart so that the pile of plates can drop on to the holder 33. The portion 29^1 is then moved back above the main portion 29, and the holder 33 is lowered against the action of a spring 36 until it rests on the pile in the hopper 29. It is then turned so as to be free of the plates, and raised again.

OUR readers may be interested in the following description of the invitation card to the Lord Mayor's banquet at the Guildhall, on Monday last:—The design is principally of a heraldic nature, embodying the arms of the City of London, the Lord Mayor, and the Sheriffs, amongst which are entwined oak leaves, laurels and roses. The arms of the City appear in the centre at the foot, and those of the Lord Mayor, surrounded by the famous collar of SS. with pendant jewel (1607), the emblem of the Lord Mayor's authority, at the head; on either side of these are the arms of the two companies of which he is a member—the Loriners' and the Girdlers' companies. Suspended from the Ionic columns are the arms of the Sheriffs, those of Lieut.-Col. John Humphery, Alderman, appearing on the left, and those of Mr. Deputy Frederic George Painter being placed on the right. Emblems of their wards are depicted in the border above, and the arms of their respective Companies, the Tallow Chandlers and the Framework Knitters, appear underneath. On either side of the City arms appears a vignette of the facia of the Guildhall and a view of Baynard's Castle, representing the ward of which the Lord Mayor is Alderman. The design was produced by photogravure engraving, and was designed, and printed on fine hand-made paper by Messrs. Blades, East and Blades, 23, Abchurch-lane, E.C. The card is a fine example of work and is executed in a most artistic style.

HOW MANY merchants appreciate the value as advertising mediums of the packages sent out to the trade? No bundle should go out of the store without having some sort of advertising matter wrapped up with it. The cost is trifling for printing isn't expensive, and there are instances where the results have been enormous from the advertising thus distributed. It is a good plan, too, to have some good advertising matter enclosed with your monthly statements.

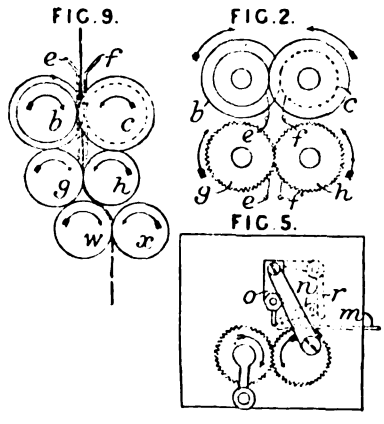
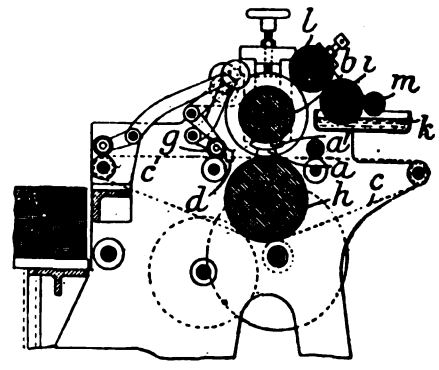
Sheet Feeding Apparatus.



An invention by Mr. G. H. L. Parsons relates to sheet feeding apparatus of the kind wherein the top sheet is fed off from a pile, which is kept at a constant level, by a travelling roller revoluble in one direction only, removal of more than one sheet being prevented by knife edges engaging the top of the pile. The pile of blanks is placed on a table 3 carried by a frame 4, which is elevated by a screw 6 as the blanks are fed off. The screw 6 passes through

a nut 10, which is rotated by a pawl 11 on an arm 12 rocked by a telescopic rod 14, 15 from an arm 17 on the shaft 19. The amount of movement of the rod 14 into the tubular part 15 is determined by the position of the adjustable collar 18. The shaft 19 is rocked by an arm 25 fixed on a shaft 2 "and engaging a roller 24 carried by a rod 22 adjustably secured on the arm 21 by a screw 23. The shaft 19 is returned by a spring 27 connected to an arm 26, which, by means of the link 30, operates the feed roller 32. The feed roller is prevented from turning on the forward stroke by a ratchet wheel and pawl. A weight 33 on a pivoted arm 34 rests on the rear of the pile. At the sides of the pile are knife edges 37 for holding all but the top sheet. The knife edges are rounded at the lower end 37", and are adjustable in brackets 39 to and from the pile by screws 42, Fig. 3. Instead of the weight 33, a spring needle may be employed for retaining the rest of the pile. The separated sheet is drawn off the pile by rollers 46, and may be further conveyed forward by a pusher 50 on a shaft 51 rocked by a cam on the shaft 24".

Destroying Documents.



In apparatus for destroying documents such as letters, printed matter, cheques, etc., patented by Mr. F. Güettler, the materials are cut longitudinally by inter-engaging disc cutters *b*, *c*, Fig. 2, the discs of which may be toothed or milled, and are torn transversely by one or more pairs of smooth or toothed tearing rolls *g*, *h*, rotating at a higher speed

than the rolls *b*, *c*. The paper is guided through the rolls by combs *e*, *f*, and a rotary beater beneath the tearing rolls mixes up the pieces. In a modification, the papers, fed along the table *m*, Fig. 5, are cut by a shearing device *o*, and by inter-engaging disc cutters, the paper being fed by a spring pressed finger *n* rocked by a bell crank lever *r*, which is struck by the shearing device *o*. In another modification, the paper, cut by disc cutters *b*, *c*, passes between two rolls *g*, *h*, Fig. 9, which may be rubber covered, to rubber covered or toothed tearing rolls *w*, *x*, rotating at a higher speed and set aside so as to increase their grip. Slotted plates *e*, *f* guide the papers through the rolls.

Coating Envelopes.

In a machine for locally coating envelopes with varnish to render a portion of the surface transparent, the invention of W. Mailänder, the blanks are conveyed between the printing cylinder *b* and the impression cylinder *h* by endless bands *c* on to which the blanks may be fed by hand or automatically. The feed of the blanks is controlled by a

timing stop *d* and a rising and falling feed-roller *g*. The printing surface *a* is made of roller composition cast on a metal base *a*¹ for attachment to the cylinder. The printing surface is supplied with varnish by a roller *l* supplied by rollers *i*, *m* from a trough *k*.

THE first number of *Mackirdy's Weekly* is to be published on January 24th. Its high and serious aims will be presented in a cheery and hopeful style. The movings pirit of this new weekly is Mrs. Mackirdy, author of "The Soul Market."

The World's Paper Trade Review.

THE RECOGNISED MEDIUM FOR

Papermakers, Wholesale Stationers, Paper Stock Merchants, Mill Furnishers, and Engineers.

FEATURES.

RELIABLE MARKET REPORTS AND STATISTICS of IMPORTS OF ALL RAW MATERIALS USED IN PAPER MANUFACTURE.

NOTES of TRADE and FINANCE At HOME and ABROAD.

The Circulation of the **World's Paper Trade Review** covers not only the entire Papermaking Industry of Great Britain, but the Principal Paper and Pulp Mills throughout the World.

FEATURES.

NEW INVENTIONS, NEW WORKS, ETC., DESCRIBED and ILLUSTRATED.

TECHNICAL ARTICLES.

Full Reports of all matters connected with the Papermakers' Engineering, Paper Stock, and Wood Pulp Trades.

IT PAYS

To Advertise in the "MACHINERY" Column all kinds of Surplus and Second-Hand Plant.

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help a-d an ornament thereunto."
FRANCIS BACON, Baron Verulam.

The tit for tats of London and Manchester in matters of print are very interesting to watch. London opens a *Daily Mail* office at Manchester, and later follows with the printing in Manchester of *Daily Mirror*. *The Manchester Guardian* then tries to capture a morning delivery circulation in London. It may have succeeded. For weeks it was delivered by cycle at my Highgate home about 9 o'clock, but I ceased taking it because that arrival, wonderful as it was, was a bit too late for me.

o o o

The *Daily News* follow the *Mail* in setting up a Manchester establishment. And the Hulton firm come south and erect a quite notable addition to London's newspaper homes; and thence issue forth the *Sketch*, not to speak of other Hulton sheets. The war between the various London halfpenny dailies and the *Sketch*, and certain apparent efforts to "peacefully persuade" newsagents to boycott that invading northerner was a very curious episode in modern newspaper story.

o o o

The powerful co-operation of Hannen Swaffer, one time art editor of the *Mirror*, has now been secured by the Hulton proprietary.

o o o

It is in the *Daily Sketch* building now, and for the daily building of the *Sketch* that you may now see him scanning the news and planning the views. Our dear Scots Rabbie best describes that fruitful ferment of ideas. "My barmy noddle's workin' prime," wrote Rabbie, shrewd child of nature that he was. Swaffer could say the same. But coiner of happy phrases and epigrams that he is, he has, I'm sure, some quite original and characteristic phrase to body forth the same assurance.

o o o

By the way, he escaped from the United States a year or so ago. I mean that he went there on a journalistic mission, and I can only call his return an escape; for proprietors who met him must have wished to induce him to remain.

o o o

And now back to the thought of long business connection. Instances are beginning to crowd on me.

o o o

I have, I think, already mentioned the 60 years career of Mr. William Tempest, printer and publisher, whom I lately met in Dundalk, between Dublin and Belfast.

o o o

At Middlesborough I have more recently met old friends in the Appleyards, the encounter furnishing another long connection story.

o o o

The business jubilee of Mr. Appleyard, senior, was lately celebrated. I will tell later something of the newspaper and printing tale therewith connected.

o o o

Mr. Walter Hazell's business jubilee was lately recorded, and the gift of £7,000 to the firm's workers by which the day was made memorable in craft annals.

o o o

Last week it was a tale of two old friends of the Kronheim firm.

o o o

I could add more than one other instance, but will speak of only one this week, that of Harry Simmons (of Bellows's), as he seemed to like to be called, and as indeed I always heard him called.

o o o

Who is there that knows the printing world with any thoroughness and has not heard the name and fame of John Bellows, the sturdy Friend, and the accomplished printer and publisher, of Gloucester city.

o o o

It was he who wrote that delightful little letter to the Clerk to certain Guardians of the county: "Dear Friend, I have the forms for tendering for the printing for thy Union and return them, as I am of opinion that this work should be done by a printer paying rates to thy Union. Thy friend, John Bellows."

o o o

Who, knowing the craft, has not heard of the quite distinctive French and German dictionaries compiled by John Bellows. I have always declared that printing is a learned profession. The early printers' readers were fine language scholars. I believe they included Erasmus. John Bellows was a blend of various old qualities of the old great craftsmen.

o o o

As proud of his craft as a Plantin or an Aldus, as vigorously and independently minded as old Baskerville of Birmingham, as ambitious in terms of letter casting as Georg Goschen, or I might even say Didot or Bodoni, since I am concerned not with the total material output, but with identity of spirit.

o o o

The very "printing house," to use the fine old term which seems fitting in the case, was such as accorded with the simple strength and endurance of his personality. No modern gimcrack vibrating building, with stucco and dabbed on decorations, but plain square or oblong substantial premises, set on a main street of old Caer Gleow, that Roman city now called Gloucester; and with a many yards length of the stout old Roman wall of the City actually included in and along the west side of the works.

o o o

The wall, to be sure, is shut off from the main machine-room; but the engineer is constantly at the wall, for there is underground shafting, and the wall in its enclosed portion is not left solitary, but has been introduced to the permanent company of some shafting and a motor, and very interesting chats the wall and motor often have together.

o o o

I recall a very ancient Assyrian tablet, whose weird-looking inscription being done into English, proved to be a letter from some old fellow to his son at school or college.

o o o

The old story—things were not as they were in Assyria in his young days, and the country was going to the dogs.

o o o

The wall was telling the motor the other day that if the Romans didn't smarten up they'd lose Britain and all the Colonies. The motor replied that that had actually happened; that England herself had lost three Empires since Rome's downfall — its Scandinavian (Canute's time), its French, and its mid-American possessions; but that it still had a tolerably large place in the sun, and always would have so long as its race was served by men like John Bellows and his sons and Harry Simmons.

o o o

Mr. Simmons joined Bellows's in 1863. It tells us much of the man he was that it was no word of his, it was simply the happening of his death, which brought to light the fact that this year was his business jubilee.

o o o

As to his early education, he was an old British School boy; but education in the later fifties and early sixties did not mean, except in Scotland, and perhaps in Wales, education as we understand the term to-day.

o o o

Gloucester had then no Council Schools. To-day it has even a printing instruction class, and one of the Bellows staff is the instructor of that class.

o o o

But, however slender young Simmons' book knowledge equipment may have been, and I suppose it to have been just a boyish average, he certainly began a liberal education when he entered the Bellows workshops.

o o o

After all, the best educated man is the one who has most points of contact with men and things; and in a large and live and a rightfully ambitious printery such points of contact are always numerous. Besides, there were the Bellows' foreign dictionaries to be "seen through the press."

o o o

Outside the Universities and the one or two specifically polyglot printeries, like Clowes and Wertheimer and Lea's, I doubt if any other firm has more matrices for casting foreign letters than are to be seen at Bellows's.

o o o

Mr. Simmons was a teacher in his time. For many years he had his class in the Sunday School of St. Michael's Church, hard by the famous Cross—the Carfax of Gloucester. The Church and Cross are near the Bellows' works.

o o o

It all seemed near together. Although his interests as a printer's manager reached out on every hand, the plane on which he operated seemed so close restricted. The distances, the travel delays, the strangerhood of the great city were all unknown to his life of repetition of familiar things, and familiar tasks and familiar responsibilities.

o o o

No wonder if he developed in that sphere the facile mastery so often associated with the ease and the impulse of habit.

o o o

He even lived in one house for 54 years. Think of it, ye printers' travellers, who live in 54 houses in one year.

o o o

I haven't much space, and really there is little to say. But that is why I dwell on it. So strong and serviceable and friendly a life, and so little to say of it! These men whose voices are not heard in the street—we are apt to forget how they aid "to drive on the scheme of things." They at least injure none; and to the degree of the high utility of their service they help us all.

o o o

Harry Simmons died in harness. He came one morning at his usual hour and had a seizure on the premises and very soon expired. He drew his last breath in the workshops whose labours, whose repute, whose humanities and personal associations through fifty years had been everything to him.

o o o

He was a bachelor and without many surviving relatives. Bellows's was wife and family, friends and almost the world to him.

o o o

And how much he was to the house we learnt from the simply worded letter in which the firm announced their loss and the grief it had occasioned them.

o o o

They wrote rather like sons who had lost a father than employers who had lost a servant.

FRANK COLEBROOK.

John Dickinson & Co., Ltd.
OLD BAILEY LONDON

In AMERICA

There is published only one weekly paper representative of the interests of employing printers. It is the most popular Printers' Paper read in that country:—

Because it is the Trade Business Journal.
Because it has a splendid news service, with twenty-two paid correspondents.
Because it deals with the practical always.
It is the only Paper which holds the attention of the man who owns the plant.
The PRINTING TRADE NEWS does not attempt to teach printers to set type, but it is the foremost authority on the latest efficiency methods, the organization activities, progress in cost system work, approved methods of printers' advertising and anything and everything that tends to make the printing business a pleasant and profitable one.

It is pre-eminently the trade journal English machine builders should use to make their product known in America.

We have good mechanics. Let us have good business men. Let the NEWS come to YOU every week. Europe **$5.00** per year; Canada **$3.00**. 64 pages weekly.

PRINTING TRADE NEWS.
326, West 41 Street. NEW YORK, N.Y. U.S.A.

TO TRADE BOOKBINDERS, BOOKBINDERS' PLANT AND MATERIAL MANUFACTURERS AND DEALERS, PUBLISHERS, LIBRARIANS, AND OTHERS INTERESTED IN THE BOOKBINDING INDUSTRY.

THE Publishers of the *BRITISH AND COLONIAL PRINTER AND STATIONER* have pleasure in announcing that an ILLUSTRATED MONTHLY SECTION of that journal is now devoted to matter concerning the BOOKBINDING TRADES.

All branches of bookbinding are dealt with, from practical and technical standpoints, and the historical and artistic aspects of the industry also receive attention. Illustrations of hand-tooled bookbindings and publishers' cases which are remarkable for their artistic design, their historic interest, or their novel character are presented from time to time.

The BOOKBINDING SECTION appeals to all those who are interested in bookbinding, whether as a trade or as an art, as all phases of the subject receive their due share of attention in its columns.

The Editor will welcome any news of trade interest that may be sent him, and is prepared to consider original articles of a technical and practical character, with a view to their publication. Information concerning the working of the technical classes in bookbinding, and notices of meetings of trade unions and other bodies associated with the bookbinding industry, are also invited; arrangements can usually be made, if desired, to report the latter, as well as lectures, etc., for the BOOKBINDING SECTION. Illustrations and particulars of new machinery and appliances, and information concerning new materials and methods for use in the trade, are likewise of interest. The publishers having no end to serve save the presentation of matter of value to the various branches of the trade, the pages of the BOOKBINDING SECTION are open to all, employers and employed, unionists and non-unionists, for the free discussion of trade matters.

As far as READERS are concerned, copies of those issues of the *British and Colonial Printer and Stationer* that contain the BOOKBINDING SECTION will be sent regularly on application, at special rates.

With regard to ADVERTISEMENTS, the bookbinding trade announcements are placed in a POSITION NEXT TO OR FACING READING MATTER in the BOOKBINDING SECTION. ADVERTISING RATES sent on application. Arrangements have been made to circulate the journal in quarters likely to be most productive to advertisers of a return for their outlay, and no effort is spared to study the interests of advertisers and readers alike.

Orders for advertisements in and subscriptions to the BOOKBINDING NUMBERS of the *British and Colonial Printer and Stationer* should be addressed to the publishers:—

STONHILL AND GILLIS, 58, SHOE LANE, LONDON, E.C.

Digitized by Google

Embossing with Sealing Wax.

The following method is given by our American contemporary, the *National Lithographer*, in a recent issue:—After locking up a type high board in a chase, and putting same on the bed of the machine, a sheet of hard pulp board is stuck down on the platen (quite free from grease) by means of fish glue or hot bookbinder's glue. Then one turns the machine by hand with the impression on, so as to press the pulp board strongly against the platen, the machine being allowed to stand under pressure for some minutes. When the pulp board is firmly fixed to the platen the embossing plate is put into the machine, and an impression is made on the pulp board in order to see where the matrix comes. Then ordinary packer's sealing wax is melted with a sealing lamp, having a horizontal flame. Sufficient of the sealing wax is allowed to drop on the place where the matrix is to come, as shown by the impression. With a flat piece of iron (for instance a gripper) made hot, the sealing wax is made smooth. After that the embossing plate is made so hot that a drop of water on it will hiss and evaporate (if made too hot, however, it will burn the wax). Before putting the plate in the machine it is well greased. Plates which stick to the sealing wax must be pressed over again. Whilst the plate is being heated, a piece of thick packing paper free from knots, should be well oiled and placed over the sealing wax to prevent sticking. The heat embossing plate being in its place, the machine is turned with the impression on, the same as when the pull was made on the pull board. After a few seconds the machine is turned again and the impression gradually made stronger, until all the details of the design come out. Then the machine is allowed to run for half a minute. If the matrix now appears free from faults all that is necessary now is to trim off the margins, with light pressure of a sharp knife; the wax cutting very easily. Should there be any faults they may be remedied by running sealing wax on to the spot to be repaired, but small faults may generally be made good by reheating the plate and running the machine again a few times with heavier pressure. When the matrix appears all right the embossing plate and matrix are freed from oil, and a few sheets of paper are stretched over the platen, after which, when the plate is cold, the embossing can begin. Of course, hot stamping with such a matrix is out of the question, but such work is not often required to be done on platen presses. The sealing wax matrix is much more simply, quickly and cleanly worked than that with matrix powder, and may be employed with quick thick carton paper.

Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be endorsed "PATENT DEPARTMENT," Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C. Telegrams: Stonhill, Fleet, London.

Russian Paper and Pulp Industries.

British Consul's Report.

The British Consul (Mr. A. W. Woodhouse) in his annual report on the foreign commerce of Russia and the trade of St. Petersburg in 1912, states that the Russian paper trade during the past year was characterised by considerable progress accompanied by a fairly large increase in the output, especially of wrapping and wall-paper, for which the demand has largely increased. During the past year several new factories were founded, mainly for the manufacture of cellulose paper, which is little by little taking the place of the paper made out of rags. Notwithstanding the growth of the paper manufacturing trade, Russia is far from able to supply her own demand for paper, and she imports about £1,685,000 worth of paper from the Grand Duchy of Finland and about £84,000 from abroad. About 60 companies, with a capital of £15,790,000 are engaged in the manufacture of paper in Russia. The largest of these possess a capital of £1,052,000; 19 other companies have a capital of from £100,000 to £200,000; the capital of the remaining companies does not reach £100,000. During the past year £94,840 worth of vegetable fibre and rags were imported and £201,058 worth of paper pulp, principally cellulose and wood pulp; the latter is imported principally from the Grand Duchy of Finland, next from Germany and Austria-Hungary. At the same time the import of paper from Austria-Hungary has fallen from £22,222 to £16,931. The import of paper and paper goods in the year 1912 was valued at £2,582,010, three-quarters of which came from the Grand Duchy of Finland, whence comes almost all the wrapping paper imported into Russia, and likewise cardboard and the more common kinds of white and coloured paper. From Germany a considerable quantity is imported of paper linen, heliographic paper, paper flowers, lamp shades, and so forth. The value of the imports of cardboard drawings and books has fallen, having amounted to £412,698. The principal imports of these goods are from Germany, and Austria-Hungary stands next. Bound and unbound books in paper covers, post cards with pictures, engravings and drawings, pictures and other such articles on paper and linen are mostly imported.

In St. Petersburg the export trade of pulp wood increased all round, including the supplies to the United Kingdom.

Cellulose was exported from European Russia during 1912 and the preceding year as follows:—

1912	21,467 tons	£142,857
1911	24,698 ,,	138,624

From St. Petersburg-Cronstadt, the following were the exports of pulp wood:—To United Kingdom—1912, 4,408 tons; 1911, 3,718 tons. To all countries: 1912, 240,264 tons; 1911, 231,093 tons.

During the same period wood pulp was imported at St. Petersburg-Cronstadt to the extent of 9,903 tons, compared with 7,548 tons in 1911, and the cellulose imported reached 2,806 tons, as against 306 tons in 1911.

Not Afraid of Boggs.

I come into the offis the other day, said the Office Boy, an' said to Dick, "Well, we got a new competitor in the field."

An' Dick he sez, "Who it is?"

An' I sez, "Boggs, the bum printer, has come to life again."

Dick jest says, "Hell, Boggs ain't a competitor; he's just a remote circumstance."

Mame, the stenog, looked horrerfied when Dick swore, but I say a woman ain't got no business in business unless she can stand for manly langwidge, although I cuss very little myself, becoz in ain't gennelmenly and don't get you nothin' but maybe a rap in the map.

This Boggs is a nut who failed about a year ago, an' he's been makin' a livin' ever since tellin' how it happened.

Ain't it funny the allybis a has-been can spill to anybody that'll listen? If he could make good as fast as he can make excuses he'd have John D. Rockyfeller's bank roll lookin' like the contents o' a Salvation Army tamborine in a dry town.

Who'd ever thought that a false alarm like this here Boggs party could ever get any one to hand him actual money? As the poet says, "Will wonders never sneeze," or sumpin' like that.

But there are allus a lot of simps to furnish a livin' for the wise ones, ready to buy a chunk of blue sky at the top price.

Boggs' angel was a feller named Eliphalet Skinner, who has just come back from bein' a furrin missionary. When the board planted their soul savers they played safe with this guy an' sent him out to the Solomon Islands where the cannibals live, coz they figured that a fat missionary would be temptin' Providence, an' this Eliphalet person havin' the general shape of a bamboo fish pole an' not carryin' any more meat than a 10-cent soup bone, he could fearlessly go where a nice pink one would have to be charged up to profit and loss. Well, there was an insurrection in these here Solomon Islands, and Eliphalet snaked a big chief into the woods and saved sumpin' more important to him than his immortal soul—he saved his everlastin' bacon. The chief was mighty grateful when he got the upper hand again and the rebels got theirs, so he handed out a bucket o' jools, making the missionary rich beyond the dreams o' Avy Rice, whoever that is. Eliphalet immediately contracted a hackin' cough an' a desire for home, so he landed in our midst, an' Boggs seen him first.

Eliphalet was warned, but he'd been among cannibals so long that he wasn't the least afraid o' Boggs, so he went to the bank an' drew out the kale, sayin' it was "bread cast upon the waters and would return an hundred fold."

Mebbe so; I never tried it with bread, an' maybe it might work, but believe me, real money cast that way is goin' to sink.

Boggs started in the printin' business first in eighteen seventy-six and his coco is full o' ideas that were in fashion when Horace Greely was learnin' the trade.

So he takes this poor simp's money what he worked so hard to get an' buys a cylinder an' a Gordon, a lever paper cutter, old style twenty-four case news rack, no labour savin' rule, leads or furniture. Boggs don't believe in savin' labour, he believes in makin' 'em work.

Now, how can he compete with a modern joint like ours?

He can't. The man that's backin' him is takin' a burglar's chance, an' in about six months when he lobs around lookin' for dividends he'll find old Boggs settin' in the middle of a deficit a singin' "Somebody else is gettin' it, gettin' it."

I sez, "Dick, what'll you do if Boggs does perk up and get some o' our business?"

Dick says, "No use figgerin' on what ain't a-goin' to happen. My eyesight is good, but I can't see Boggs. If a real live one should drift in here, why I should worry and get another Harris press."—*Harris Monthly.*

The Paper Trade of Melbourne.

The Wholesale Paper Merchants' Association.

It is not often that such a friendly understanding is found in the ranks of paper and print as that which exists in Melbourne. At the thirty-first annual dinner of the Victorian Master Printers' Association, Mr. D. Macdougall (senior vice-president), in proposing the toast of the "Wholesale Paper Merchants' Association," said he was pleased to know that they (the wholesale stationers) had now followed the good example of the master printers, and had formed a very successful organisation of their own; in doing so they were working on right lines by issuing what he considered a very fair price list for their papers, and in adopting the open-door policy, that is, of allowing all genuine paper merchants to join their Association and participate in the advantages that will naturally follow. In the past some of the blame for the printers slaughtering prices was due to the paper merchants for the way in which they had afforded the printers facilities for obtaining paper at reduced rates; for instance, if a printer made a mistake in a job of any consequence, he would go to his paper merchant and inform him of his trouble, and he invariably reduced the price of the paper, of course to his own loss, to help the printer; and also if a printer was quoting against a rival who obtained his supplies from another paper house, or against a well-known house, who was its own paper merchant, he was very often assisted. This sort of thing was no good to the trade as a whole, and fortunately was now at an end. However where our paper merchants had offended in the past they have more than made good during the last twelve months. Some considerable time before there was any talk of an Association of their own, their President (Mr. J. C. Gates) and Mr. John Cook had both personally spent no end of time in explaining the objects and advantages of the Master Printers' Association, and generally inducing printers to join in the movement, especially as they considered that the lines as laid down were fair and considerate to the printer and public alike and that we were only fixing fair conditions and selling prices for our labours. They were all very grateful indeed to the Paper Merchants' Association, and especially to their President (Mr. Gates) for the loyalty, help, and generous consideration which they had at all times extended to the printing trade of Melbourne; they realised rightly, in his opinion, that the printers' success was their success; and for this good feeling he could assure them on behalf of the Master Printers' Association their efforts in the past were very much appreciated by one and all of his fellow members. Mr. J. C. Gates (president of the Wholesale Paper Merchants' Association) responded on behalf of the Paper Merchants' Association.

American Paper.

The Imports into the United Kingdom.

The following figures show the total values of the British imports of paper, etc., from the United States, and the amount retained in the United Kingdom during the last five years:—

	Total Imports.	Retained in U.K.
1912	£248,210	£222,819
1911	258,738	237,831
1910	275,120	252,825
1909	361,129	339,045
1908	248,979	232,299

The imports—for consumption in this country—comprised the following:—

PRINTINGS OR WRITINGS.

On Reels.

1912	52,688 cwts.	£27,786
1911	124,097 ,,	67,267
1910	156,770 ,,	85,878
1909	216,393 ,,	121,135
1908	72,641 ,,	43,109

Not on Reels.

1912	58,361 cwts.	£87,568
1911	44,580 ,,	66,221
1910	73,227 ,,	69,045
1909	126,382 ,,	106,915
1908	49,267 ,,	69,016

PACKINGS AND WRAPPINGS.

1912	7,378 cwts.	£8,532
1911	4,813 ,,	7,721
1910	16,602 ,,	11,293
1909	16,018 ,,	12,727
1908	22,606 ,,	19,339

PRINTED OR COATED PAPERS.

1912	6,300 cwts.	£26,298
1911	6,569 ,,	30,916
1910	6,747 ,,	32,656
1909	16,794 ,,	76,461
1908	19,516 ,,	79,256

STRAW, MILL AND WOOD PULP BOARDS.

1912	33,547 cwts.	£30,980
1911	30,579 ,,	23,304
1910	23,039 ,,	19,742
1909	27,748 ,,	21,807
1908	34,036 ,,	21,679

UNENUMERATED AND ARTICLES OF PAPER.
(Included in "Paper for Printing and Writing," and "Goods manufactured, unenumerated," prior to 1910.)

1912	23,567 cwts.	£41,655
1911	20,939 ,,	42,402
1910	15,203 ,,	34,211

MR. H. A. GWYNNE, the editor of the *Morning Post*, read a paper the other evening at the Royal United Service Institution, on "The Press in War." Mr. Gwynne suggested that a small committee of not more than ten be formed, composed of eminent journalists, and elected by the profession, or selected by the Government, as the case may be. This committee should enjoy to the very fullest extent the absolute confidence of the newspapers of England, and not only that, they should be names which would carry respect with the general public. To this committee should be given a place in the Admiralty or War Office on the outbreak of War, and they should work in close co-operation with either one officer or a committee of officers appointed by the authorities.

THE FORGERY AND Imitation of Historic Bookbindings.

I.

The rapid growth of present day interest in what the boooksellers term "fine and rare books," on the part of connoisseurs of taste and knowledge, and also on that of the ignorant and blundering newly-rich, is largely responsible for the continued existence of the "book faker," who aims at supplying, by his own handiwork, what the second-hand book market cannot genuinely furnish in sufficient quantity to meet the demand.

During the last few decades the methods and technics of forgers of old art works have surprisingly increased, but on the other hand the knowledge and capability for distinguishing the same, on the part of those who either in a professional or amateur way are engaged with the collection of such things, have increased in the same proportion, says Dr. Schinnerer, in a recent issue of the *Archiv fur Buchgewerbe*.

The trade in antiquities is controlled by experts of all kinds, and a heaping up of old art objects without any criticism of their value or genuineness, as was possible only a decade ago, exists very rarely nowadays. The museums have gradually expurgated their collections from all that they had acquired in former times in the way of forgeries, and in most cases the only places where such doubtful treasures are still to be found are the homes of private collectors, especially when these are of somewhat old standing.

It is no longer a secret that the collection of H. Klemm, which at present, as "the Royal Saxon Bibliographical Collection," is one of the most valuable parts of the Leipzig Museum for the Book Industry, could supply material for many a chapter under the heading of "book forgeries," but trouble has not yet been taken to go into this matter in a systematic way. He who views this collection only superficially will at once be struck by the fact that almost all the old printed works are newly bound, for the larger part in exceedingly tasteless bindings, but how far Klemm had attacked the bindings themselves, to what extent he had them restored, newly-painted and embellished with all kinds of unnecessary ornament, only becomes clear to one who takes time to study these volumes a little more carefully. It would lead us too far to treat of this matter of book forgeries on general lines, so we will only deal here with the forgeries in binding which the museum in question possesses. As Klemm evidently did not have the slightest notion of the bibliopegic art, he had no interest in collecting old bindings, so that the forgeries do not belong—with one exception—to the old Klemm collection. The larger part of this was only bought in 1896 through the medium of Dr. F. Boek, of Aix la Chapelle. Of the 20 bindings bought, half were forgeries, and for the future these can be recognised by the year mark "1896."

In the seventies or eighties of the last century, the forging of bindings was quite a favourite pastime, and especially well known in this connection are the painted Siennese bindings.* The Eldorado of these forgers seems to have been Italy, from which country came the larger part of the forged bindings that are in the Museum of the Book.†

Through the purchase of the Becher collection some time ago, an interesting binding came into the museum, which gave rise to a good deal of speculation. It is in brown leather, the front and back shows a design which has evidently been obtained by means of a block pressed into the board, and consists mainly of four medallions of Biblical subjects. Above and below is a sort of frame with mythological animals, and the ornamentation on the sides consists of tooled branches and leaves. It is not certainly known to which century this piece of work is to be attributed; the embellishments and medallions point to the middle ages, but the technical treatment indicates a later date. In addition to that, the impressions are lacking considerably in sharpness, a certain sign of a decadent period. The binding must therefore

Forged Bookbindings, No. 1. Showing a Modern Design of mixed 16th and 17th Century Styles built up round a Genuine Coat-of-arms of about 1780.

have been executed in modern times, and it has been copied freely from the ivory-covers of the Psalter of Queen Melisandra in the British Museum. But certain details have been changed, and the medallions inserted. Whether it is a question of outright fraud or a matter of what we might term archæological sport, the Museum authorities have not been able to decide yet.

It seems more difficult still to give a definite opinion regarding another somewhat dubious binding in the Becher collection. Amongst the valuable series of needlework bindings which Becher brought together, there is one in red satin, which seems to originate from Venice (11,889) and bears on the front and back a coat of arms, underneath being the inscription: "Hie (ronymus) Priolus Venetiarum Dux." A simple border frames both sides. This somewhat remarkable inscription, the satin on the front, and the relatively new work lead to the suspicion that the covers are modern, although the binding itself is old and the printed work it enclosed has been torn out.

The most primitive forgery—which indeed hardly deserves that name, so obviously has it been copied without any reference to genuine old specimens—envelops "Les Familles de la France," Paris, 1636 (1896–18). The artist who has made it has tooled on the old brown leather covers a series of gold-lined pictorial designs. A queen on a throne with a curtain made up of lilies; at the left hand side a female figure with sword and sceptre, and on the right a winged genius, handing her a box; above is a coat of arms, which looks just like that of the Farnese family, underneath being a peacock and the inscription: "Dive junoni armorice sacrum." All this proves, clearly enough, that the whole is the work of a modern practiser of the so-called "romantic" style, as is also a second binding from the same source, which encloses a book of 1625, "La Pratica Prospettiva del Lor Sirigatti," Venice (1896–20). This is a large design, framed with a scroll work border, enclosed in gold lines as before, and painted with oil colours. It represents King Tarquinius Superbus with the Cumaic Sibyl, who carries the three sibylline books in her hand; the heads of the figures have been cut out of paper.

Most of the forgeries, especially those which have—albeit with great care and refinement—obviously been produced for fraudulent purposes, have been made in such a way that a really old, but very little decorated binding has been greatly raised in value by adding a coat of arms, emblems and other ornamental embellishments.

Old bindings with the arms of well-known personages or renowned collectors, *e.g.*, Grolier's, or the French Kings of the sixteenth century, have a much higher value than bindings without these marks of former ownership, although otherwise looking nearly the same; similarly, a binding showing arabesques à la Maioli is of much higher value than one showing only a plain border, although it may be in quite as good taste. The arms of Henry II. of France seem to have been often used on such forgeries. In the Museum of the Book are two of these works. The one (1896–10) is in a brown leather binding with rich decoration à la Grolier, which is absolutely new work. This is especially the case with the centre-piece, in which, on front and back, is the coat of arms of the King, surrounded by arabesques worked with azured tools. The twined crescents, the device of the King's beloved one, Diana of Poitiers, have not been forgotten by the forger. The whole composition does not by any means make a bad impression, and we can easily imagine that many have been deceived by it.

The other volume of this kind, which has been presented by an antique dealer, Herr Hess of Munich, (10/164) is not so pompous in style. The coat-of-arms is simpler, and has been impressed into the leather in a much clumsier way; the crescent die has been partly made wrong, and the H surmounted by a crown, which means so much to the connoisseur, does not make a very good im-

*An article on these, with illustrations, appeared in our Bookbinding Number of January last.

†More about Italian bookbinding forgeries can be found in the work of Fumagalli on Demetrio Canevari (page 15 ff.), where also the literature of the subject is referred to.

Digitized by Google

pression in this case. The really old part in this black leather binding is, apart from the small circular dies and the enclosing lines, only the scrollwork enclosing the arms. This forgery comes probably from Bologna, as well as a few others that are not so easy to locate, two of which try to imitate the Aldine type (10/163 and 165). The additions in both cases consist mainly of a scroll work design and small leaf and other dies. The old part in binding 10/165 is no doubt the cartouche in the centre and the outer border. The discrepancy in style between the ornaments is clearly visible. Very suspicious also is the binding of another, a little volume (1896/21), which came with the Boek collection, and is also in the Aldine style. The decoration is, it is true, fairly homogenous, but the work is not very good. The curved lines have often ripped up the leather altogether, and the gold has that bronze-paint like colour so often seen in modern gilding, moreover the lines of the decoration have been drawn somewhat unsystematically; the leather of course is old. Modern work can be recognised more easily in the case of a black leather binding, enclosing a Neapolitan work of 1572 (1896/22). This had originally on the covers a tooled border made up of acorns, and enclosed by lines, and in the centre the coat-of-arms of an Abbé or Bishop, in a cartouche. The forger tried to make his work appear to date from the period when Italy's bookbinding art was at its zenith, by filling up all the empty spaces with scrolls à la Grolier, and the borders with little dies of eagles. After the same principle, but with much more difficulty, a large light-brown leather binding has been altered (also presented as a forgery by Mr. Hess, 10/166), and in many respects this is of great interest, see illustration No. 1. The enclosed book is of the year 1535, but the ornaments of the cover, however, do not furnish sufficient information to enable one to find out their date definitely. Besides the coat-of-arms we see here a somewhat peculiar scroll-work design on a background provided with a series of small circular dies and occasionally a laurel branch, in the style known as "Fanfare." Very prominent also are the two-horned ornaments above and below the centre, of a type which only came in vogue in the middle of the seventeenth century. The most peculiar part of all is, however, the coat-of-arms, which is supposed to be that of the Marquis of Turinetti, who lived around 1780.* An investigation of the technical part of the work proved, furthermore, that the modern dies have been impressed on damaged parts of the leather, which would hardly have been possible had this part of the gilding been done simultaneously with the binding. All these contradictions prove clearly the forger's work. The coat-of-arms is the only old part; all the rest has been put in by a modern bookbinder, who was not even well versed in the styles used by the older ones. Generally speaking, however, the modern forger is very careful in this respect, either sticking to old specimens or copying them direct, thereby avoiding errors of style. Besides, he does not have much difficulty in securing any old dies which are required for his forgeries, and then it is only a matter of using them in the same way as the old bookbinders. As old unembellished leather bindings are easily "faked" up, a well versed forger, with good taste, is theoretically able to deceive even the best experts.

* Compare that figured in the "Nouvel Armorial du Bibliophile" of J. Guigard, Paris, 1890, page 459.

(To be continued.)

THE death is announced of Mr. J. W. T. M'Dougall, the founder and managing director of the well-known Edinburgh schoolbook publishing firm of M'Dougall's Educational Co., Ltd.

Camberwell Printers and Students

AND THE

COST FINDING SYSTEM.

A lecture on "The Printers' Cost Finding System" was delivered at the L.C.C. Camberwell School of Arts and Crafts, on Wednesday evening, 12th inst., by Mr. A. E. Goodwin, organising secretary of the Costing Committee of the Federation of Master Printers, preceded by an address by Mr. W. A. Waterlow, vice-president of the Master Printers' Federation. The chair was taken by Mr. C. T. Jacobi, of the Advisory Sub-Committee of this School, and there was a number of students and local printers present.

In opening the meeting the CHAIRMAN introduced Mr. Goodwin, referring to the large amount of missionary work he had accomplished up and down the country on the subject of cost finding. Printers were beginning to realise that there was something after all in the suggestion for a better and more uniform system of estimating, and charging according to the true value of their work. The subject should therefore be of the utmost interest to the master printers present, and especially to those young students from whose ranks were recruited their future managers and employers. He was also glad to learn that cost finding was going to be made one of the subjects taught in many of the technical schools in London. Introducing Mr. Waterlow, the Chairman said he was an active member of the Costing Committee in London and the president-elect of the London Master Printers' Association.

Mr. WATERLOW, in an interesting address, remarked that the subject of costing did not much interest their ancestors, the people who founded some of the businesses with which they were connected to-day, because in those days profits were undoubtedly larger. At the present time, when profits go down to a very fine point, it was most essential that they should know exactly what their cost of every job was, and be sure that every hour's work they had to sell bore the proper proportion of the establishment cost. That was the basis of their system. There was as little as possible left to chance. The subject of costing was brought prominently before the Masters' Association some twelve or fifteen years ago, and Mr. W. W. Fox then took a prominent part in bringing the matter forward, and he was very sorry to notice the announcement of his death a fortnight ago. The present movement originated two years ago, when at a meeting of the Master Printers' Federation it was generally expressed by all the master printers present that the cost of production was going up so much that something must be done to increase the price of the article they were selling. It was felt that the proper way to tackle the subject was to take up the scientific costing side, for if they could bring home to the printer—if he could bring home to himself exactly what his article cost he was not likely to sell that article below cost price. If on his cost dockets he only had a portion of his costs, and then wrote a rough percentage to cover all the general expenses, he did not know where his profit began and his cost ended. They claimed for their system that if the printer's business was running on its normal lines, that was if the business they were doing was approximating pretty closely to the previous year, or a series of years over which they based the system on instituting it into their office, then everything over and above what appeared on their cost docket should be profit. He had found in practice that it worked out very satisfactorily and did give them an accurate idea of what their profit was. The Federation of Master Printers, after the Costing Committee of the Federation had held a very large number of meetings extending over about twelve months, put out the present system as being the best they could recommend. It was somewhat on the lines of the system in force in America, which had worked very well indeed, and they were informed had improved the position of the trade in the States. They had brought the system to the notice of the Printers' Managers and Overseers Association throughout the country, because they could do very much towards getting it into general adoption, and the Committee had approached Sir Philip Magnus, and after hearing what they had to say he took the view that it might be usefully put into the syllabus of the technical schools. Now they were endeavouring to bring the benefits of the costing system home to the younger generation who would in time attain to positions of responsibility in the printing trade, some perhaps becoming employers. They wanted to impress upon everyone the importance of getting the system into general adoption. There should only be one system of costing, because the disproportion that at present occurred in so many estimates that were given was not always through people not having any proper system of costing, but it very often arose from the fact that the costing was carried out on different principles. One house would put more and larger establishment charges on to their materials, while another would put more on to labour, so that the buyer always had the advantage that he could take the lowest estimate. It also created in the minds of the buyer the feeling that the printer was rather a thief or a robber, because he got such extraordinary variations in his estimates, and that led the buyer also to put out numerous enquiries to a lot of firms, which caused a deal of labour in printing offices. They believed if they could get a universal costing system adopted it would very largely reduce the number of estimates they had to get out, and therefore would give them more time to devote to their businesses and in a better direction. Mr. Waterlow then pointed out the wrong ideas that prevailed on the cost of production, and the mistaken impression that some trade unionists had with regard to the dockets. He expressed his conviction that a costing system such as this was for the benefit of the printing trade and for the benefit of the employer, and if the employer was going to be able to make better profits it was going to be for the benefit of the workmen.

Mr. A. E. GOODWIN then delivered a very clear exposition of the approved cost finding system, aided with a collection of lantern slides illustrating the various forms, and at the close he replied to a number of questions invited by the chairman.

Mr. W. H. AMERY, the instructor of the classes, announced that a lecture on "Costing and Management" would be given at the School by Mr. R. J. Elliston, general manager of Messrs. Hazell, Watson and Viney's Aylesbury Branch, on January 21st, followed a month later by a lecture there by Mr. Jowett, the assistant manager.

On the motion of Mr. COOPER, jun., a hearty vote of thanks was accorded to Mr. Waterlow for his address, and on the motion of Mr. R. J. LAKE, secretary of the Federation of Master Printers, a vote of thanks was cordially passed to Mr. Jacobi for presiding.

SOUTH African Customs Invoice Regulations

The South African Section of the London Chamber of Commerce (Incorporated), and the South African Merchants' Committee have recently made representations to the High Commissioner for the Union of South Africa relative to the Regulations under the Customs Management Act of the Union of South Africa, under which it is laid down that invoices shall contain :

(1) A statement in a prominent place as to the current value for home consumption in the home market for similar goods at the place of purchase, bought in the ordinary manner and manufactured or supplied in analogous quantities ; and

(2) That the invoice shall also clearly show the cost of packing and packages.

As a result of the correspondence with the High Commissioner referred to, it is recommended (except as regards definite contracts, to which reference is made later), that suppliers should give effect to these regulations in the following manner :—

(a) In cases where the price charged on the invoice and discounts allowed and the Home consumption value are alike, sign a declaration to the following effect :—

"I declare that the values appearing on the body of this invoice represent at the date of the invoice the open market value of the goods if sold for Home consumption in Great Britain, and that the discounts shown are the same as those granted on similar quantities sold for consumption in Great Britain."

(b) In the instances where the price charged on the invoice and discounts allowed and the Home consumption value are divergent, enumerate the latter on the invoice in a parallel money column and declare that "the discounts for similar quantities for Home consumption are .. .."

Where the price charged the consumer is a contract price, the invoice must clearly indicate the current value for Home consumption at the date of the contract, thus :—

	Current value for Home Consumption	Selling Price to Purchaser in South Africa.

and the words "at the date of contract" substituted for "date of the invoice."

In all cases the cost of packing and packages must be given. The declarations must be signed, and the figures given authenticated, by either manager, principal, director, or secretary of the firm or company making the same.

From communications with the Commissioner of Customs of the Union of South Africa, it is understood that if the above recommendations are carried out by the suppliers, they will meet the requirements of clause 103 of the Regulations published under the sections of the Act referred to.

The Commissioner of Customs intimates that should any general laxness become apparent in the signing of such certificates, the value and discount for home consumption will be insisted on in the body of the invoice for the several items thereon.

Dont's for Rulers.

Don't rush—but keep moving.
Don't clean the pens over a job.
Don't use your jackknife on the pens.
Don't forget to start right—then go ahead.
Don't pinch double pens to make finer lines.
Don't leave the machine too much to the feeder.
Don't use the cheapest flannels ; the best are none too good.
Don't use a hard scraper on the pens, or you'll split them up the back.
Don't bother to read instructions after a job is done ; read them carefully before starting.
Don't hesitate to ask questions when in doubt ; better be snubbed occasionally than go wrong.
Don't shift guides or pens in the midd e of a job which has to be printed ; the printer has troubles enough of his own.
Don't under-estimate when asked for time or price on a job, especially when the job is intricate.—*Printing Trade News.*

THE Board of Trade Umpire appointed under the Unemployment Insurance Regulations has decided that contributions under that Section of the National Insurance Act, 1911, are not payable by workmen engaged by envelope manufacturers to trim and sharpen envelope cutters.

Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be endorsed "PATENT DEPARTMENT," Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C. Telegrams : Stonhill, Fleet, London.

Safety Vacuum
Bronzing Machine

(Mark Smith's Patent.)

Patented in England, America, Germany, France, and other Countries.

Speed - - 2,000 per hour

Fulfils all the requirements of the Home Office.

One attendant only required.

Sheets Bronzed and dusted on both sides and left perfectly straight on the Delivery Board.

Most Economical in the use of Bronze.

Keeps the Room ventilated and free from Bronze Dust.

Machine can be cleaned whilst running.

Patented in 1903 and covered by several later patents.

Repairs. *One firm write:*—"The Vacuum Bronzing Machine (Mark Smith's Patent) which you put down for us in February, 1909, is in constant use every day on all classes of work, and is working as satisfactorily now as ever. The cost of upkeep has only amounted to a few shillings, after over four years' constant running."

Printers' Managers and Overseers ASSOCIATION.

MANCHESTER AND DISTRICT CENTRE.

The annual general meeting was held at the Crown Hotel, Booth-street, Manchester, when Mr. Thos. Kirkwood, president, occupied the chair.

The minutes of October meeting were read and confirmed. The election of officers was as follows:—President, Mr. Thos. Kirkwood; vice-president, Mr. F. Burnett; trustees, Messrs. Jas. H. Burton and Edward McVay; treasurer, Mr. Jas. E. Mayo; hon. secretary, Mr. F. J. Hughes, 424, Moston-lane, Manchester; executive council, Messrs. A. Bartlett, W. E. Dalby, J. McCosh, T. Rignall, G. E. Shirra, G. E. Shearsmith, R. F. Singleton, D. Wain. Messrs. Jas. H. Burton and Robt. Marshall were the scrutineers.

Mr. ROBT. MARSHALL moved, and Mr. F. H. A. FRANCIS seconded a vote of thanks to the retiring officers.

The question of a levy of sixpence per member per quarter for 1913-14 was discussed, when Mr. Robt. MARSHALL moved, and Mr. F. WHEELDON seconded: "That no decision be made until the annual report and balance sheet are presented at the December meeting." Carried.

The question of honorarium to the treasurer and hon. secretary was referred back to the council.

At the conclusion of the business the President called upon Mr. J. Pollitt, of Oldham, to deliver his lecture entitled:

"What Becomes of Our Old Clothes."

Mr. POLLITT proceeded to give a brief sketch of the history of paper and the process of its manufacture. He began with the earliest attempts at recording events, as practised by the Jews and the Egyptians, and in tracing the development of writing from the hieroglyphics and cuneiform characters to the writing of the Greeks and Romans, he dealt with the material on which they wrote, mentioning the invention of paper by the Chinese, and its introduction into Europe by the Arabs. He then proceeded to answer the query adopted as the title of his lecture. He described the processes through which the cloth we wear has to go, before it is sent to the tailor or dressmaker and is made up into clothes, the waste cuttings being sold to the rag dealer. Then he spoke of the latter's arrival at the paper mill and proceeded: The rags have arrived at the paper mill, they have been sorted out, all buttons cut off, all seams slit open, and after going through the cutting machine and the willowing machine, or devil, as it is termed, where all the dust is thoroughly beaten out, it is taken to the boilers. All the different materials go through the same processes exactly, the only difference being in the time taken. Straw is boiled for about 2 to 3 hours, wood and esparto 6 hours, rags 8 to 10 hours. After boiling it is brought to the hollander where it receives its first breaking up. This is a large oval tank, with a centre division called the midfeather, of such a length as to form a channel of equal width all round. On one side is a revolving cylinder fitted with steel knives, which meet with other steel knives on the bed of the hollander. The boiled stuff is added gradually, and the combined action of the knives break it up into very small stuff. This breaking is continued for three hours, and after this it is washed until the water runs away from it quite clean. It is now taken to the potcher, exactly the same kind of machine, but much larger. The cylinder in this machine is fitted with wood paddles instead of knives. These do not cut up the pulp, but thoroughly agitate it, and make it susceptible of being freely and uniformly acted upon by the bleaching agent, which is here added. When the pulp goes into the potcher it is called half stuff; when it leaves the potcher and is carried to the beater it is called stock.

The beater is another similar machine, but since it is required to beat the pulp still finer, it is fitted with more knives than the hollander and the cylinder revolves at a greater speed. In this machine they first add an antichlor to neutralise the effect of the bleaching powder. They also add here the loading, sizing and colouring materials. In this machine the pulp receives its final beating, and when it leaves here it is ready for the paper machine. The pulp, which is now called stuff, is pumped into the stuff chest, like very thin gruel. The stuff chest is fitted with constantly revolving agitators, which prevent the fibres and other material settling to the bottom. It is pumped from the chest into the wet end of the machine, first flowing over a series of sand traps, then under a leather apron, which is raised or lowered to regulate the flow and consequent thickness of the paper, and, leaving the apron, the stuff runs on to an endless and constantly travelling wire for about 50 feet. Whilst the wire is travelling forward there is an arrangement called the shake, which gives it a shaking or jerking motion to distribute and knit the fibres together. If it were not for this shake the fibres would all be in one direction, and all the strength would be in the lengthway of the paper, and none at all in the crossway. The pulp is prevented from running off the wires by the deckle straps, which run along with the wire but come back by the overhead route. At the end of the wire the pulp runs under the first press roll. Here all the water is pressed out, and the pulp assumes the form or body of paper. Under the second press roll, or dandy roll, to give it its correct name, the pulp receives whatever distinguishing mark is required, whether water mark, trade mark, or lines which distinguish a laid paper from a wove. Leaving the dandy roll, it passes between two felts and under and over every one of the drying cylinders. On some machines there are only 10, but there are various numbers up to 24. These are heated by steam to thoroughly dry the paper. If the paper is required to be a finished or smooth surface it is again wetted before passing over the last two.

If a paper is required to be highly glazed, burnished or calendered, on leaving the drying cylinders it is run direct through, under and over everyone of a series of 22 chilled steel rollers. The length of paper machines varies from 75 feet to 150 feet or over, and make paper up to 150 inches wide at the rate of 500 feet per minute. As you know, paper is not always the same on both sides; sometimes it is highly glazed on one side and rough on the other. This is termed machine glazed or M.G. To get this finish the paper must not go over all the cylinders we have just noted, but is made on what is termed a Yankee. This is exactly like the Fourdrinier as far as the press rolls, but after that it has only one cylinder, which may be 25 or 30 feet in diameter. The paper runs between the bare cylinder on one side and a sheet of felt on the other. The pressure on the cylinder gives it the glossy finish. Art paper has to go through still another process; the reel is slit to the required width and taken to another machine, where it is unwound and run through a bath of satin white, pearl hardening or blanc fixe to give it the required coating. This cannot be run round a cylinder to dry, so it is carried along hooks or runners and hung up. Paper for newspaper printing and for some other purposes, including that of bag making, is sent out in reels. Bags can be made, pasted and finished complete at the rate of 220 per minute—but everyone cannot do with paper in reels; it must be cut into sheets of given sizes. After cutting it is taken downstairs to the sorting room, where the paper must undergo an inspection and all defective sheets put out. After sorting it is taken to the packing room where, if required folded, the sheets are counted out into quires and packed in reams of 480 or 504 sheets.

A hearty vote of thanks was accorded Mr. Pollett for his interesting lecture and Mr. W. E. Dalby for manipulating the lantern, both gentlemen suitably replying.

In AMERICA

There is published only one weekly paper representative of the interests of employing printers. It is the most popular Printers' Paper read in that country:—

Because it is the Trade Business Journal.
Because it has a splendid news service, with twenty-two paid correspondents.
Because it deals with the practical always.
It is the only Paper which holds the attention of the man who owns the plant.
The PRINTING TRADE NEWS does not attempt to teach printers to set type, but it is the foremost authority on the latest efficiency methods, the organization activities, progress in cost system work, approved methods of printers' advertising and anything and everything that tends to make the printing business a pleasant and profitable one.

It is pre-eminently the trade journal English machine builders should use to make their product known in America.

We have good mechanics. Let us have good business men. Let the NEWS come to YOU every week. Europe $5.00 per year; Canada $3.00. 64 pages weekly.

Trade Notes.

THE Leicester Master Printers having agreed to give an increase in wages of 1s. 6d. per week to their men, the advance duly came into force on the 4th ult.

NEXT week the Organising Secretary of the Federation Costing Committee is spending the first few days in Nottingham, attends a meeting of the master printers in Manchester, on Thursday, the 27th inst., and then proceeds to Scotland, where meetings are being arranged in Glasgow, Edinburgh, Dundee and Aberdeen.

THE other evening the Council and members of the Empire Press Union entertained at luncheon, at De Keyser's Royal Hotel, Mr. J. O. Fairfax (Sydney *Morning Herald*), Dr. Stanley Reed (*Times of India*), Mr. James S. Brierley (Montreal *Herald*), and Mr. E. Horton (New Zealand *Herald*). The Hon. Harry Lawson, M.P., presided.

MESSRS. JOHN KIDD AND CO., the well-known printing ink manufacturers, have opened a branch warehouse at 40, Church-street, Birmingham, where a full stock will be held and orders promptly supplied for their newspaper, jobbing, poster, litho and offset inks, printers' rollers, blankets, brushes, oils, and other requisites for the printer. This new branch should prove of great convenience for Midland printers.

ON Saturday night Sir George Riddell delivered an address at the Jewish Institute, Mulberry-street, E., on "Newspapers and Periodicals: How they are made and distributed." He described a newspaper as practically a living thing, creating as it did ideas and developing the human brain to an extent that was perhaps not fully appreciated by the 45 millions of population in this country. The modern newspaper, he declared, disseminated more wisdom in a day than ever Solomon did, and would in time replace Dreadnoughts in public estimation, power and influence.

THE action by Mr. William Lotinga against the *People*, Ltd., for alleged wrongful dismissal was concluded before Mr. Justice Bankes on Saturday. Mr. Lotinga alleged that an agreement lasting until 1916 under which he was to write for the *People*, and to receive a salary rising to nearly £1,000 a year had been broken by his summary dismissal. The defendants justified their dismissal on the ground that he had broken his contract by disclosing his identity with "Larry Lynx." They also counterclaimed for damages for this breach. The jury returned a verdict for the defendants. The counterclaim stands over for the present.

JUBB'S METALS.—The excellent qualities of the monotype, linotype, stereo and other metals manufactured by Messrs. T. G. and J. Jubb, of Leeds, are so well known in the trade that it is almost superfluous to mention them here, but it is gratifying to the firm to know that they are appreciated wherever used. A repeat order for monotype metal has just been received from a firm in Montreal, Canada, who remark in their letter to Messrs. Jubb: "The previous order you filled for us in April last was very satisfactory." The firm has also had numerous new and repeat orders for their metals from New Zealand, Australia, South Africa and America, in all of which countries they are highly appreciated.

INSTITUTE OF PRINTERS.—With a view to afford the members an opportunity of inspecting an important and up-to-date printing machinery factory, and also with a desire to mark the election of Mr. Frank H. Taylor, general manager of Linotype and Machinery, Ltd., to the office of vice-president of the Institute, members who are printers have been invited by the Board of the above-named company to visit its extensive Works at Broadheath, near Manchester, on Friday, 28th inst. Carriages will be reserved for members to travel by train to Manchester on the Thursday evening, and an interesting programme has been drawn up of the visit to the different departments of the works, including luncheon there, presided over by Sir Joseph Lawrence, and at which Sir George Riddell, president of the Institute, and Mr. Frank H. Taylor, are announced to speak.

A MAN named Walter Rhodes Hardy, described as an advertising agent, was sentenced by the Bolton magistrates last week to three months' imprisonment with hard labour, for frauds by means of home employment advertisements, and to ten weeks for frauds by means of loan advertisements. The sentences are to run concurrently. Counsel on the prisoner's behalf, said that when the cases against him were boiled down it would be found that there was only a sum of £10 18s. 6d concerned. The prisoner's mother was prepared to pay in full all the people who had written complaining.

MR. C. W. BOWERMAN, M.P., will preside at the twenty-second quarterly meeting of the Printers' Medical Aid Association, on Wednesday next, the 26th inst., at the L.S.C. offices, St. Bride-street, E.C., at 7 p.m.

ACCORDING to *Kemp's Mercantile Gazette* there were five failures in the printing and stationery trades of England and Wales for the week ending Friday, November 14th; the corresponding week in 1912 showed two.

ON Tuesday, at Bromley (Kent) Police Court, the first case under the Advertisements Regulation Act was heard. The Kent County Council summoned Messrs. Strong and Son, printers and bill posters, for exhibiting an advertisement visible from the public highway and so placed as to disfigure the natural beauty of the landscape at Farnborough. For the defence, ignorance of the Act was urged. After hearing counsel, a fine of 40s. and 13s. costs was imposed.

THE Newcastle-on-Tyne Co-operative Printing Society, Ltd., held its annual dinner at the Co-operative Hall, Newcastle, the other night. Mr. Thomas Wallace presided, and the vice-chair was occupied by Mr. F. Thomas. The toast of the "Co-operative Printing Society" was proposed by Mr. William Crooks, who mentioned that the Society he represented had been connected with the Printing Society for more than 40 years. They had always found it turned out satisfactory work. It was almost unique with regard to the distribution of the wealth it created in the north-eastern part of England, for it recognised the worker and gave him a share in the profits according to his wages, representing the highest principle of co-operation. Their employees worked 48 hours per week compared with 50 hours worked by competitive undertakings. Ideal conditions were afforded, and they had succeeded because they believed in co-operation, which was good, and in co-partnership, which was better.

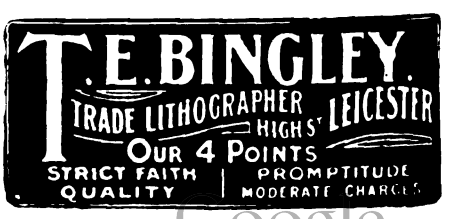
TENDERS ACCEPTED. — For printing and supplying the stationery, books, etc., required by the Corporation of Sunderland: Sunderland Post Co., Ltd., West Wear-street, Sunderland, general printing, printing voters' lists, and year books; E. Moran and Sons, Villiers-street, Sunderland, education printing, supplying books, etc.; Hills and Co., Fawcett-street, Sunderland, stationery. For printing and stationery for the Proposal Committee of the Londonderry County Council: D. Irvine, Waterloo Printing Works, Londonderry; J. C. Glendinning, *Standard* Printing Works, Londonderry. For the supply of books, stationery, and furniture for the elementary schools, for the Lancashire Education Committee: Books, etc., E. J. Arnold and Son, Ltd., Leeds; T. Hope, Ardwick, Manchester; furniture, Kingfisher, Ltd., West Bromwich. For school supplies for the Barnsley Education Committee: E J. Arnold and Son, Leeds (recommended for acceptance). For supply of school requisites for the local Education Authority of Swinton, Lancs: T. Griffiths and Co., 65, Bridge-street, Manchester.

TENDERS WANTED. — For the supply of school books, stationery, etc., and kindergarten materials to schools within the city of Sheffield, for the Education Committee; forms of tender from Mr. G S. Baxter, secretary, Education Office, Sheffield. For the supply of printing and stationery for the Salford Guardians; particulars from Poor Law Offices, Eccles New-road, Salford. For printing the minutes of the Portsmouth Council and of the Education Committee, etc.; particulars from the Town Clerk, Town Hall, Portsmouth. For the supply of books, apparatus, stationery, and sewing materials required at the several Rotherham Council and voluntary schools, for the Education Committee; forms of tender from Mr. J. A. Mair, Education Offices, Rotherham. For the supply of graphs, graph composition, etc., for use in the public service; particulars from the Comptroller, H.M. Stationery Office, Westminster, S.W. For the supply of books, stationery, apparatus, kindergarten, sewing materials, etc., for the Macclesfield Education Committee; forms of tender from the Education Office, Town Hall, Macclesfield

THE Bodoni Centenary Celebration Committee ask us to mention that copies of the monograph issued by them in connection with the centenary (see our issue of October 23rd last) can still be obtained at the price of 1s. 3d. per copy. The Bodoni Number of *L'Arte Tipografica* is also on sale at 5s., as well as Sig. Bertieri's interesting work on the "Art of Bodoni," which we dealt with fully in our issue just referred to. It is also of interest to mention that a few copies are still available of the beautiful facsimile of the first edition (Foligno, 1472), of Dante's "Divine Comedy," produced at the Fifteenth Century Printing office in the Turin Exhibition in 1911. The edition consisted of only 200 numbered copies, ordinary ones, plainly bound, being priced at £10 10s., and special ones illuminated and bound in leather with protective studs, etc., at £16. Particulars of all these publications can be had from the Royal School of Typography, 37, Via Carlo Alberti, Turin.

LEAD POISONING.—Two cases of this nature were reported to the Home Office last month from printing establishments, making a total of eighteen since the commencement of the year, as compared with twenty-eight in the corresponding period of 1912.

A PIONEER COSTING SYSTEM.—As long ago as 1830 Chas. Babbage wrote as follows:—"The great competition introduced by machinery, and the application of the principle of the sub-division of labour, render it continually necessary for each producer to be on the watch to discover improved methods by which the cost of each article can be reduced; and, with this view, it is of great importance to know the precise expense of every process, as well as of the wear and tear of machinery which is due to it."



"PITMAN'S SHORTHAND AND TYPEWRITING YEAR BOOK AND DIARY FOR 1914" is brought quite up-to-date with all the latest information regarding the subjects of the title. There is an excellent diary, a week to a page, descriptions of the various typewriters on the market, particulars of shorthand and other associations, and a vast fund of matter of interest to those who practise the kindred arts. Nicely got up and well bound in stiff covers it is an excellent shilling's work. It is published at 1, Amen-corner, E.C.

THE Labour Exchanges of the Board of Trade during the five weeks ended October 17th, received 2,064 applications for employment in the printing, stationery, paper and allied trades, of which 983 were from men. The number of vacant situations notified in those trades during the period in question was 1,141, of which only 425 were for men. The number of vacancies actually filled through the Exchanges was 839, of which 288 were taken by men. In the juvenile branch, 1,084 vacancies were notified, including 625 for girls, and 820 filled, of which 527 were taken by girls.

UNDER the auspices of the Institute of Bankers Mr. Charles Duguid gave the first of a short course of lectures, the other evening, on "The Daily Money Article." Mr. Duguid pointed out that the money article, City page or financial section, whatever it might be called, was a comparatively new department in the newspapers, a department which had grown with enormous rapidity during the past few years. He attributed the growth in the space devoted to the money article in newspapers generally to the remarkable increase in the intelligent interest which the community takes in financial affairs, especially in Stock Exchange affairs.

LONDON printers are to have another opportunity of meeting to discuss the Costing Committee's recommendations. Mr. R. A. Austen-Leigh and Mr. A. E. Goodwin are the speakers at the Aldenham Institute, Goldington-crescent, on Friday next, and Mr. G. Eaton Hart takes the chair at 7.30, and under his guidance the discussion will certainly be of a thoroughly practical character. The special committee appointed to further the movement in London will hold its first meeting this week, and as it consists of keen enthusiasts, who have experienced the benefits gained from correct costing methods, its plan of campaign will be noted with interest.

THE Board of Education announces that reproductions of two specimens in the Textile Collections at the Victoria and Albert Museum, printed in colours on sheets measuring 15 in by 12 in., have been placed on sale at the catalogue stall in the Museum, price 1s. each. The specimens selected for reproduction are (1) a linen panel embroidered with silk, English work dated 1730, and (2) part of a linen bodice embroidered with silk, English work of the early eighteenth century. Special care has been taken to give a true rendering of the texture and colours, as it is thought that the reproductions may be useful to students and workers who are unable to examine the originals.

TENDERS WANTED.

COUNTY OF LONDON.

THE LONDON COUNTY COUNCIL invites tenders for the supply of about 325 tons of PULP for TRAMWAY TICKETS during the twelve calendar months commencing approximately 1st January, 1914 Particulars of the material required, Form of Tender, and Conditions of Contract, may be obtained from the Chief Officer, London County Council Tramways, 62, Finsbury Pavement, E.C. Tenders must be upon the Official Forms, and the instructions therein must be strictly complied with. No tender received at the County Hall after 11 a.m. on Tuesday, 2nd December, 1913, will be considered. The Contractor will be bound to pay all workmen employed by him in and about the execution of the Contract, or any part thereof, wages at rates not less, and to observe hours of labour not greater, than the rates and hours set out in the Council's list, and such rates of wages and hours of labour will be inserted in and form part of the Contract by way of Schedule. Full particulars of the Council's Standing Orders on these matters are given in the London County Council *Gazette*. The Council does not bind itself to accept the lowest or any Tender, and it will not accept the Tender of any person or firm who has withdrawn a Tender after the same has been opened, unless the reasons for the withdrawal were satisfactory to the Council.

LAURENCE GOMME,
Clerk of the London County Council.

County Hall, Spring Gardens, S.W.,
17th *November*, 1913.

Costs, the Apprentice and the Small Printer.

"THE apprentice is father to the master printer," is a paraphrase of a familiar saying, which provides a sound reason for the recent endeavours of the Costing Committee of the Federation of Master Printers to convey a knowledge of the cost finding system they are advocating to the students in the printing craft. The latest meeting held in London in the interests of this movement appealed to two important sections of the printing community—the small local printer and the students or apprentices in the trade, the latter the potential printers of the future. The small printer is the most numerous, and we believe, the most difficult to convince of the need for having a scientific system of costing in his business. The large firms have invariably had some sort of system of cost recording—frequently it has been found to be very little different from the Costing Committee's ideal one, and the process of making it practically identical has presented but little difficulty. But it is otherwise with the small local printers who have paid little attention to the accountancy side of the business, and have a rooted objection to innovations in this department. The system looks very complex to them at a first glance, and they recoil from the idea of employing extra assistance on the non-productive side, which they at once conclude it must require. The meeting at the Camberwell School of Arts paid special attention to this class, an instructive set of lantern slides being shown, illustrating the various forms used in the system as applied to a small business. The lecturer, Mr. A. E. Goodwin, as organising secretary of the Costing Committee, has travelled extensively throughout the country during the past few months, calling upon provincial printers of all grades, and as a result he possesses a most interesting fund of information and anecdote, as was evident by many little incidental remarks he let drop in the course of his lecture. He scouts the rather prevalent idea that the majority of printers have no proper system of bookkeeping. The bankruptcy courts occasionally show us that there are some, but Mr. Goodwin, who has been told by some pessimist that 90 per cent. of printers have no books at all, contradicts this by asserting that he has been in many printing offices up and down the country, and has not found one where there are no books at all. He found printers very much dissatisfied with conditions as they are, and everywhere, he says, there seems to be an idea that this costing campaign is giving them a glimmer of hope that the printing industry will be much better in the future. The students at the Aldenham Institute are to have the system explained to them on Friday evening.

* * *

Industrial Unrest.

THE Labour Department of the Board of Trade has issued the annual report dealing with strikes and lock-outs, and the work of conciliation and arbitration boards in the United Kingdom during 1912. From it we gather that the number of disputes was 857, the number of people affected 1,463,281, and the aggregate duration in working days of all disputes in progress during the year 38,142,101. It is estimated that the aggregate duration of the coal strike last year was 30,800,000 working days, an unprecedented figure. Of course the majority of the disputes arose through demands for higher wages and recognition of trade unions. Glancing down the report the conclusion any sane person might come to is, that there is a great wave of unrest passing over the United Kingdom, and when the figures for 1913 are presented to the public by the Board of Trade it will be found that the records of the past ten years will be beaten in most instances. Indeed, the returns for the first eight months of the present year show that the disputes between employees and employers have reached 960 and 500,000 workpeople were involved. In these returns the differences that have arisen in the printing industry are recorded. Frankly, the feeling of unrest is on the increase. Sir George Askwith (chairman of the Industrial Council), during his recent visit to Bristol looked at this state of affairs depressingly, and he said:—"Unrest will increase. In a short time there may be other events coming to a head to which recent events have been quite a small forecast. Therefore, it is not good for men of the puplic school and university type to stand by and do little or nothing and take no interest in the concern. I don't believe that any movement of the kind I have referred to can be stopped by force. What I do think is that their effects upon the community can be mitigated by a better understanding between persons and persons, and this understanding young men from public schools might do much to assist." The forecast in this speech is not very encouraging for manufacturers, and it also appears that all the machinery the Government set up has proved futile in settling disputes. According to the report of the Board of Trade, a great majority of the differences between

Digitized by Google

parties were settled by negotiation between themselves. That has been the policy in the printing industry, and when the government recognises it as a happy medium out of a difficulty, we feel sure that manufacturers and their employees will never resort to other agencies.

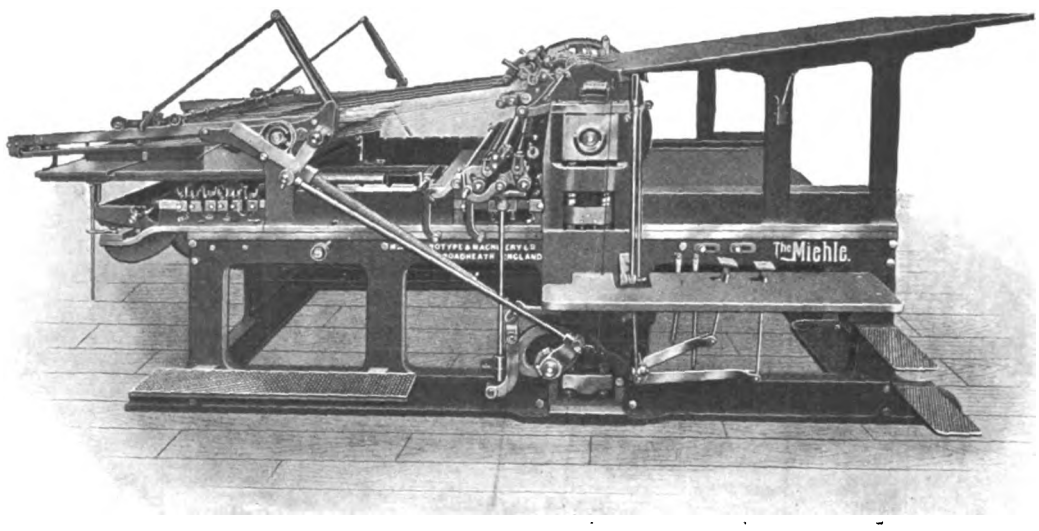
Costing Educational Campaign.

Men of Dorset Consider Costing.

Dorset's claim to produce the best men in the British Isles was a recent subject of discussion in a leading London daily, and on the occasion of Mr. Goodwin's visit to Weymouth on November 14th he alluded to this as one reason why he was pleased to have been invited to meet the printers of that district, so that he could form his own opinion.

The interest of Mr. Ling, of Dorchester, and Mr. Byles, of Weymouth, in the costing movement was responsible for the visit of the Organising Secretary of the Costing Committee, and they secured the attendance of representatives of the other principal firms in the district to hear the system explained.

After the Federation methods of cost finding had been fully explained and a number of questions replied to, the advantages of organising an association for the master printers in the district was discussed, and those present warmly supported the idea.



In thanking Mr. Goodwin for his lucid exposition, several speakers expressed their determination to adopt the recommendations of the costing committee, and also to do anything they could to further the movement.

It was decided to call another meeting at an early date to form a local Master Printers' Association, Mr. Byles undertaking to convene the meeting.

AN accident which narrowly escaped serious results occurred in the machine department of the Isle of Wight *County Press* during the printing of last week's issue of the paper. The rotary web machine had been started about half an hour and was running smoothly under electric power, when without warning a corner of one of the circular ½-inch thick stereotype plates suddenly flew off and was thrown through the web of paper on to the next cylinder, passing on the face of page 6 between this and the impression cylinder adjusted to take only the thickness of the paper being printed, and fell clear into the pit under the machine. It speaks well for the quality of the material of which the machine was built and the workmanship of Messrs. Hoe, the makers, that the cylinders carrying the plates safely bore this excessive sudden strain. If they had collapsed or jammed, as might well have happened, the consequences with the high speed at which the heavy machine was running would have been disastrous. As it was, the machine was promptly stopped by means of one of several electric "stop" pushes placed about the machine, for use in emergency, two new plates were cast, and the machine was started again within an hour.

The Miehle
TRADE MARK

IS PRODUCING THE FINEST COLOUR, BOOK, AND JOBBING PRINTING THROUGHOUT THE UNITED KINGDOM AND COLONIES.

In half-tone work, the Miehle reproduces every gradation of tone contained in the blocks—from soft high-lights to heavy solids.

Its reputation for perfect colour printing (which includes efficient rolling power and the features which make for dead register) is embraced by the standard phrase "Miehle Quality," which means essentially Miehle printing.

The Miehle is fitted with two deliveries, which at will deliver the product printed side up or printed side down.

The inking equipment provided on this press consists of sixteen rollers and a large ink table; of these, four are forme rollers with reciprocating riders and rollers over them (nine in all, arranged in pyramid form). The other seven rollers distribute the ink on the table before it reaches the forme rollers.

This press is built in six sizes; the smallest size takes a sheet up to 26-in. by 39½-in. and the largest size 46-in. by 66-in.

Miehle presses are also supplied in tandem, so arranged that the units may be disconnected and used as single machines.

The Miehle is Manufactured and Sold by

LINOTYPE AND MACHINERY LIMITED

who have the sole and exclusive right to manufacture and sell The Miehle in the United Kingdom and Colonies (except Canada).

Financial.

Offices of the *British and Colonial Printer and Stationer*,
58, SHOE LANE, LONDON, E.C.
WEDNESDAY, NOV. 19th, 1913.

BEGINNING with the end of last week, money has been in keener demand, and the supply of credit has been affected by heavy calls. There has been enough to meet current requirements, however, and yesterday there was a better supply, the late American mail being then first available. Rates for call loans range from 4½ to 4¾ per cent., and advances for seven days command 4½ per cent. In the discount market rates are firm for two and three months' bills, but there is an easier tendency for the longer dated maturities. Bullion movements have resulted in a net influx to date of £101,000. Stock markets have exhibited a more confident tone this week, and the outlook is viewed more favourably. Consols stand at the same quotations as a week ago, viz., 72¼ to 72⅝ for money, and 72⅝ to 72¾ for the account.

There has been a distinct improvement in the miscellaneous industrial market, firmness being maintained. Business shows no expansion, however, in the section relating to paper and print, and movements have been both ways. Linotype and Machinery Deb. have risen 1 in both the A and the B shares, and Amalgamated Press Ord. have gained ⅛. Falls have occurred in Carl Hentschel Ord. of $\frac{1}{32}$, in Kelly's Directories of ⅛, and in Raphael Tuck and Sons Ord. of $\frac{1}{32}$. Business has been done during the past seven days in Amalgamated Press Pref. at 20s. 9d. and 20s. 3d.; in Associated Newspapers Pref. at acc. 20s. 3d.; in Cassell and Co. at 97s. 6d., 92s. 6d., 93s. 9d., 95s., 97s. 6d., and 93s. 9d.; in Sir Joseph Causton and Sons Pref. at 95s.; in John Dickinson and Co. 1st Pref. at 99; in International Linotype at 72; in Kelly's Directories Pref. at $9\frac{31}{32}$ and 9⅝; in Linotype and Machinery A Deb. at 56 and 57, and in B Deb. at 37⅛ and 38; in Edward Lloyd Pref. at 21s. 10½d.; in George Newnes Pref. at 16s. 3d. and 17s.; and in Weldons Pref. at 21s., and in the Ord. at 30s.

DIVIDENDS AND REPORTS.

AT the annual general meeting of the Lady's Pictorial and Sporting and Dramatic Publishing Co., Ltd., held last week. Sir William Ingram, Bart., presided, and in the course of his address said that the company had now reached its seventeenth financial year, and had never yet omitted to pay a dividend, not only on the preference shares, but on the ordinary shares, and even although the profits at the present time were not quite so large as they had been on other occasions, it was a question whether the soundness of the financial position of the company was not as good, if not better, than it had ever been before.

A. B. FLEMING AND CO. have declared an interim dividend of 1s. 3d. per share, less tax on the ordinary shares.

ILFORD.—The directors of Ilford, Ltd., recommend a dividend of 6 per cent. on the ordinary share capital for the year ended October 31st, 1913.

HAZELL, WATSON AND VINEY. — Interim dividend of 8 per cent. per annum (8s. per share) on the ordinary shares for the half-year.

NEW COMPANIES.

INTERNATIONAL CHECK BOOK CO., LTD.—Registered on November 10th, with a capital of £100, in £1 shares, to carry on in Birmingham and elsewhere, the business of stationers dealers in office, shop, warehouse, factory and other books, and stationery, printers, etc. The subscribers are F. A. Greenwood and J. O. Constable. Private company. The first directors are not named.

J. A. RENNIE PUBLICITY CO., LTD.—Registered on November 13th, with a capital of £1,000, in £1 shares, to carry on the business of advertising agents, manufacturers of and dealers in proprietary and patent goods and medicinal, pharmaceutical and chemical articles, etc. The subscribers are J. A. Rennie and H. Dennis. Private company. The number of directors is not to be less than two nor more than five; the first are W. Shakespeare, jun., H. Dennis and J. A. Rennie. Registered office: 8, Bouverie-street, E.C.

COMPANY NOTICES.

STAR and MORNING LEADER (1909), Ltd.

At a meeting of the company, held at London, on October 16th, the following resolution was passed; and at a subsequent meeting, on November 12th, was duly confirmed:—"That the company be wound up voluntarily, and that Mr. Ernest Parke, of 21, Bouverie-street, E.C., be appointed liquidator of the company. Notice is given, that a meeting of the *Star* and *Morning Leader* (1909), Ltd., will be held at 21, Bouverie-street, E.C., on December 2nd.

COMMERCIAL INTELLIGENCE.

J. COX and CO.,
Printers.

A sitting of the London Bankruptcy Court was appointed to be held on November 12th, before Mr. Registrar Hope, for the public examination of John Cox, lately trading as above at 33, Union-street, Borough, S.E., and residing at 29, Dukesthorpe-road Sydenham. The receiving order was made on September 22nd, upon the joint petition of Spicer Bros., Ltd., and Tee and Whiten and J. Mead, Ltd., the act of bankruptcy alleged being the departure of the debtor on or about July 31st last with intent to defeat or delay his creditors. Mr. Walter Boyle, official receiver, reported that the debtor had not surrendered to the proceedings, and so far as could be ascertained he had left the country. Under those circumstances he asked for the sitting to be adjourned *sine die*. His Honour made an order on those terms.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIP DISSOLVED.

ROBINSON, T. J., DENBY, G. F. and F., trading as the Northern Photographic Co., at 3, Westgate, Bradford, photographers and post card manufacturers. Debts by G. F. and F. Denby, who will continue to carry on the business under the old style. July 22nd.

THE BANKRUPTCY ACTS, 1883 AND 1890.
RECEIVING ORDERS.

CNOOPS, J., lately trading at Holland House, Gainsborough-road, Felixstowe, stationer, etc. Date of order and of adjudication order, November 13th, made on the debtor's own petition. First meeting of oreditors, November 26th, 2.30 p.m., at the Official Receiver's Office, 36, Princes-street, Ipswich. Public examination of debtor, December 11th, 10.30 a.m., at the Shire Hall, St. Helens, Ipswich.

GRAHAM, W. H., 21, Bexhill-road, St. Leonards-on-Sea, stationer, etc. Date of order and of adjudication order, November 12th, made on the debtor's own petition. First meeting of creditors, November 26th, 11.30 a.m., at the Official Receiver's Offices, 12a, Marlborough-place, Brighton. Public examination of debtor, December 16th, 11 a.m., at the Town Hall, Hastings.

NOTICES OF DIVIDENDS.

GRAHAM, J. D., 145, Gray's-inn-road, lately 47 Oxford-street, London, W.C., journalist. Second and final dividend of 8d., November 24th, at the offices of Moore, Partridge and Co., C.A., 2, Gresham-buildings, Guildhall, London, E.C.

HAKE, W. H., lately trading as the South Coast Emporiums Co., 23, Sea-road, Boscombe, Hants, stationer. First and final dividend of 1s. 5¾d., November 21st, at the Official Receiver's Office, Midland Bank-chambers, High-street, Southampton.

THE COMPANIES ACTS, 1880 AND 1908.
NOTICE OF RELEASE OF LIQUIDATOR.

UNITED PRESS, LTD., 19, 21, and 23. Tudor-street, London, E.C. Liquidator, H. V. Brougham, senior official receiver and liquidator, 33, Carey-street, Lincoln's-inn, W.C. Released November 7th.

Seggie, with geared inkers, etc.; nearly new Royal ditto; Quad Crown, Double Crown, Crown and Demy Folio Wharfedale Printing Machines; Crown Folio Platen Machine; Guillotine Paper Cutting Machine; Treadle Perforator; 2 Relief Presses; Reel Wire Stitcher; Electric Motors; Shafting, etc.; 3 Tons Book and Jobbing Type; Chases; Galleys; Frames; Wood Letter; Fixtures; Fittings; Office Furniture; 2 Typewriters; Stock of Paper, Cards, etc.

On view day prior and morning of Sale, and Catalogues of the Auctioneer, 71, Fleet-street, London, E.C.

Scottish Bookbinders' Strike.

This strike has now become general, the men who gave their notices in Glasgow, Edinburgh, and other towns having left work on their expiration. At a mass meeting of the men in Glasgow last week, it was agreed by those in work and unaffected by the dispute to levy themselves 5s. a week until the conclusion of the strike. It was also agreed to give generous support to the females who have been dismissed since the commencement of the dispute for refusing to do men's work.

On Friday afternoon a meeting of the Glasgow employers was held, when the situation in Glasgow and the other parts of Scotland affected by the dispute was considered, and the following resolution was passed unanimously:—"That this meeting of the

Digitized by Google

employers in the bookbinding and paper-ruling trades in Glasgow receives with satisfaction the reports of the unanimity prevailing among the employers, resolves to maintain the position already taken up, and leaves the proposal for a conference, made by the men's Federation, to be dealt with by the Executive Board of the Scottish Alliance, in whose hands they have already placed the whole matter.

The secretary of the Printing and Kindred Trades' Federation of the United Kingdom, in a communication to the Scottish Alliance of Masters in the Printing and Kindred Trades, has suggested that an early effort should be made to bring the parties involved in the bookbinders' strike together in the hope of reaching a settlement. It was stated that the Bookbinders' Society were willing to take part in a conference. The secretary of the Masters' Federation, in reply, stated that his board of officials would be in a position to decide as to a conference when they learned the views of the men's Federation on certain points. They asked an assurance that the proposed conference had been suggested with the approval of the Federation's Executive, the Central Executive of the Bookbinders' Union, and of the Scottish District Council of the Union.

It is announced that within the past few days eight firms in Edinburgh, employing altogether 150 men, have agreed to the men's terms and four firms in Fife have settled. One of the firms in Edinburgh which employs 30 bookbinders was considered to be a very unlikely one to fall in with the men's request. Mr. James Kelly, general secretary of the National Union of Bookbinders and Machine Rulers, has arrived in Glasgow from Manchester and met the local Executive Committee. The situation which has arisen out of the request made by Mr. A. E. Holmes to the Scottish Alliance of Masters in the Printing and Kindred Trades for a conference, and the answer of the employers, was discussed fully. Interviewed after the meeting, Mr. Kelly said that Mr. Holmes had been in Edinburgh as secretary of the Printing and Kindred Trades' Federation to act as an intermediary between the two parties in an endeavour to bring about a peaceful settlement. In requesting a conference he had acted, however, without the authority of the National Union of Bookbinders.

Several London publishers who employ Scottish binders have been compelled by the London Consolidated Society of Binders, before they can have books bound in London, to give a guarantee that they will not send any more work to Scotland until the dispute is settled.

The London Strike

is still going on, the only new feature being the withdrawal of the ban on the London publishers by the Federated committee of the National Union of Bookbinders. This decision affects eighteen houses, and will greatly facilitate the late autumn and Christmas book trade.

According to the *Labour Gazette* employment in the bookbinding trade in London was good and better than a month ago, a considerable amount of overtime being worked. In other centres it was fairly good, except at Dublin, where it continued slack.

PRINTED ADVERTISING TAPE.

ACCURATE. EFFICIENT. RELIABLE.

THE PLUNGERLESS

"BETTERWETTER"

Automatic Type-High Numbering Machine.

It has no Plunger. It has no "No." Prints figures only.

Machines to Number Backwards made to order.

Larger Styles of figures made to order

STYLES OF FIGURES. **Prices:**

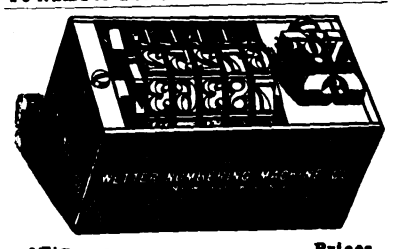
1234567890 5 Wheels (Style A or B) 85/-

1234567890 6 Wheels (Style A or B) 98/-

The Betterwetter is made of the best materials throughout, and all parts are hardened where necessary, insuring great durability, perfect accuracy, and long life.

The pressure of the platen or cylinder on the figures operates the mechanism which changes the numbers and also brings into action ingenious bearers which raise automatically and hold the printed sheet off the figures while they are changing.

These bearers do not print on or indent the paper.



It is the only typographic numberer that prints nothing but the figures, without a "No.," a period, or any other prefix or suffix intended to act as plungers or to prevent the printed sheets from being smeared by the revolving figures.

THE STANDARD **"WETTER"**

TYPE-HIGH AUTOMATIC NUMBERING MACHINE.

To Number and Print at One Impression.

WITH LOW PLUNGER.

STEEL WHEELS.

Styles of Figures. **Prices.**

№ 12356 5 Wheels (J or K) 42s. each

№ 12345 6 Wheels (J or K) 52s. each

The WETTER is constructed of the best materials; parts are hardened where necessary; workmanship the best, and is superior to any numbering machine now on the market.

The SIDE-PLATES are "roughed" or "knurled" in place of being smooth, highly polished or "damaskeened," which prevents the machines from "riding up" or falling out of the form. Don't have to be "locked up" so tightly.

The DROP CIPHER is of new construction, and is the only one that can be guaranteed not to get low even under very hard usage—the life of a machine depends on this detail of construction.

A DISTINCT ADVANTAGE.—Each machine is equipped with a "hold-down" screw for rigidly holding the plunger inoperative, so that any number can be printed a definite number of times.

The PLUNGER is lower than others, permitting working on any cylinder press and it is not necessary to remove the Plunger at any time. Plunger is so arranged that the "No." Slide can be removed without taking the machine from the form, and a letter or character of any kind inserted to precede the figures.

The Cheapest "Wetter" Machine on the Market.

The MIDGET "WETTER"

AUTOMATIC TYPE-HIGH NUMBERING MACHINE.

To Number and Print at one impression.

Made in two sizes only, five wheels with Title figures, and six wheels with Gothic figures.

"BUILT LIKE A WATCH."

Size ¾-in. by 1⅜-in.

All parts are made of steel. The smallest machine on the market.

STYLES OF FIGURES

32356 (Title) 5 Wheels Price 75s.

123687 (Gothic) 6 Wheels Price 85s.

"Wetter" Cash Sales Slips Machines kept in Stock.

Numbering from 1 to 50, and 1 to 100.

"Wetter" Machines made to number backwards.

Dating, Numbering (combined), Perforating, Cancelling Machines and Stamps supplied. Estimates given for large quantities.

For further particulars of the above Machines write to—

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help a. d an ornament thereunto."
FRANCIS BACON, Baron Verulam.

So W. W. has gone. Redoubtable old W. W. I didn't even know that his name was William Waring. He was always just W. W. to me, and I think to all his associates of the Printers' Managers' Association. W. W. —the individual man, very practical and very confident; and withal very serviceable to the craft.

o o o

I said he was an in*divid*ual, and I've italicised the root of that word. An individual, strictly speaking, is one who has something in his personality, in his composition, in his temperament, which is not divided with any other; someone who has a soul that really is his own, and who dares to call it his own.

o o o

I've not met many individuals. But W. W. Fox was one of them. Not an egotist, but an individual.

o o o

As between an egotist even and an echo-tist, give me the egotist all the time. You can knock his nonsense out of him. You can't knock anything out of or into an echo-tist.

o o o

I can see and hear W. W. now, rolling out some of those, truth to tell, rather portentous sentences of his, for perhaps he almost overdid it a bit at times.

o o o

He had a caustic style, and could use it well, and liked to use it. I think if he had not been so afflicted with deafness, if he could have mingled freely and easily with us, his very style would have been better. But we took him for just what he was—a very able, very devoted, very progressive type.

o o o

Certainly he was not a man to ignore. He got things done. He made men come along with him. Seven times, I think, he addressed the P. M. and O. A., and not one occasion but was notable.

o o o

I believe I heard all seven talks; and I attended the memorable gathering ten years ago at the Stationers' Hall which was the outcome of Mr. Fox's addresses at the P. M. and O. A. and his general pioneering work in scientific pricing. Employers arranged that meeting, but a deputation from the P. M. and O. A. attended it. The deputation included Mr. Fox, for all his deafness.

o o o

The great bone of contention then was not what was the correct system of ascertaining all your costs; it was the more restricted enquiry as to what was the real cost of the compositor hour. And in that restricted but none the less vitally important matter Mr. Fox was unquestionably the chief protagonist. He must have made house after house advance its rates.

o o o

Some prominent master printers have in the last few weeks referred to his immense contribution to the uplift the whole craft is now at last receiving. These words I feel sure were not prompted by any knowledge of his being ill at the time; they were simply the thing which justice obviously required.

o o o

I attended his lecture on case-room equipment; and particularly noted his new lay of a case. I might add that he was a stalwart in trade journalism, speaking to the craft through the medium of *Caslon's Circular*, and I've no doubt there were many fruitful colloquies between him and the heads of that ancient and most modern foundry. I've no doubt that there too he got things done.

o o o

At Waterlow's (whose great house he served as case-room overseer for about 33 years), I cannot doubt that it was a fortunate thing for many men and boys to be under his influence and training.

o o o

No doubt he had his foibles; but the only one I know of was that he over-laboured some of his causticisms. And at least he was far removed from that unspeakably boring man the fellow who is perpetually complimenting this one and that one. He thought for himself; and he told folk what he thought of them. And that some folks didn't always like.

o o o

The craft is greatly his debtor. We, who knew him, shall be grey headed ourselves and forget much about ourselves before we forget him.

FRANK COLEBROOK.

Borders on the Linotype.

Messrs. Linotype and Machinery, Ltd., have just issued a new specimen book showing the various borders, rules, dashes, special signs, etc., that may be cast on that versatile machine and for which they supply the matrices. Since the publication of the last specimen book numerous additions have been made, and many combinations can be made up in the way of borders that may be anything in size from nonpareil up to quite a respectable width, and by the use of a little taste and discrimination the printer who has installed a Linotype may make quite an artistic display. A new feature in the use of these borders is that they may be used in curved shapes, the bending and mitreing being done quite easily, and on this point the book has the following remarks:—

"Only those who have gone closely into the matter can have any idea of the amount of time occupied and the large quantities of material used in setting advertisements and display work when the Linotype is not employed for the purpose.

"The mitreing of Linotype slugs is a simple and easy matter. The slugs are equally satisfactory whether the mitres are cut separately or the left and right angles obtained in one operation, but obviously the latter method is a labour-saver.

"As regards curved designs, it is surprising that even greater use is not made of Linotype slugs for this purpose, for there is apparently no limit to the number of designs which can be shaped from slug borders.

"In this way, not only can almost any design be made up, but a valuable addition to the stock of ovals, circles, etc., is thus created at the mere cost of the metal. Two examples are shown in the book.

"Linotype slugs of rules and borders form an ideal material for bending. They are certainly the most economical material for the purpose, and there are the further advantages of having a large number of faces and designs to choose from and the low cost of standing matter.

"The only tool required is a rule curving machine—quite a small affair—the correct use of which can be learned in a few minutes. The one point it is necessary to mention regarding the use of the tool is that, whereas when bending brass rule the material is taken to a smaller radius than the finished product requires and is then brought out to the size required, the Linotype slugs are handled in the reverse way (that is to say, the slugs are gradually reduced to the radius already determined upon)."

Another new feature is the addition of braces, which are shown in a wide variety of lengths. A perusal of this book will give the printer a wider idea of the capacity of the Linotype composing machine and its general usefulness in the jobbing office.

FROM the commencement of last month, the weekly wages of about 550 compositors and machinemen at Bradford, employed on jobbing and weekly news, have been raised from 34s. to 35s.

BOOKBINDING SECTION.

Bookbinding Notes and News.

The strike of bookbinders in Scotland forms the most absorbing topic of the trade just now. As this "Section" goes to press in advance of the rest of the journal, the latest strike news will be found on another page. The position is one that is best described by the expression "marking time," which applies to each of the contending parties. As regards the London dispute, now apparently nearing its end, the Federated Committee of the N.U.M.B.R. sent out to the leading publishing houses, on the 22nd ult., a long circular appealing to them to fall into line with those firms who had agreed not to send any work to Messrs. Burn and Co. pending a settlement of the dispute. One passage runs:—"We regret that during the dispute certain publishers have been put to some inconvenience. They have so far resented the action of the workpeople as to throw all their influence on the side of the firm; and here we respectfully submit that you could help us by insisting that your books shall be produced under fair conditions of hours and wages. After all, 35s. for a week's wages can hardly be regarded as exorbitant. Many in your sphere of life spend as much or more in cab fares." The following are the names of the publishing firms who, up to the date of this circular, acceded to the request of the Union in the matter: Amalgamated Press (Harmsworth), Cambridge Bible House, Chapman and Hall, Educational Book Co., Everitt, Frowde (Oxford House), Gay and Hancock, Grant Richards, Griffin (Portsmouth), Hodder and Stoughton, Iliffe and Son, John Walker and Co., Joint Committee (Frowde, Hodder and Co.), Kegan Paul and Co., John Long, Newnes, Nisbet, Pearson, Partridge, Putnam, Reeves, Routledge, Sampson Low, Sands, Shaw, Sherratt and Hughes, Sidgwick and Jackson, Smith, Elder and Co., Temple Press, Truelove and Hanson, Watts and Co. (Rationalist Press), Wells, Gardner and Co., Williams and Norgate. It will be seen that many of the leading firms in the trade figure in this list, but, on the other hand, the list of those who declined to give the desired assurance included some equally well-known names, such as John Murray, Chatto and Windus, Constable, Bell, Heinemann, Macmillan, Methuen and Rivington. A printed leaflet was also issued for circulation amongst the non-union workers employed in Messrs. Burn's Royal Mills at Esher.

The Scottish strike has given rise to some correspondence in the Glasgow *Evening Citizen* and other periodicals. A "Stationer" began it in the *Citizen* of October 28th, by a letter in which he championed the cause of the women binders. He was backed up next day by "Another Stationer," who was of opinion that "these girls do their work well, keep regular time, and give an honest day's work for their pay, which is what cannot be said about many of the male members of the Union. Why, therefore, should 700 or 800 such workers be thrown on the street to swell the unemployed? If the societies had men to take their place, there might be some grounds for the demand, but they cannot offer any, and if these girls are put out, business in many factories would be practically stopped. Much of the work they do has developed from their presence in the trade, and would never have been developed had men only been employed. Cheap memo. books, cheap account books, cheap publications of all sorts cannot be provided at a price to ensure a large sale if made by high-paid men. Yet, beside all this class of work, there are more men employed than ever before, and the work these girls are doing does not interfere in any way with the employment of the men. There are practically no unemployed capable men in the trade." A writer with the initials J. J. C. considered that "it is the girls who keep these men in practically constant employment. The small wage paid to the females, and the society wage paid to men, enable stationers of this country to compete against the Germans, otherwise, with only male employees at the society wage, they would not be in it. Thus, if female labour is demolished, it will absolutely ruin the trade."

On the other side, "A Finisher," alluding to the "employers who are posing as the champions of the women," asked, "will any of them explain why they introduce sewing-machines and folding-machines to displace women, and how, with production trebled, are women's wages as low if not lower than 30 years ago, and why the formerly recognised apprenticeship of four years for girls is now unheard of? This is an old dispute, as could be proved by an agreement drawn up many years ago, and could easily be brought up-to-date but for the uncompromising attitude of employers. Bookbinders' wages (34s. for 50-hour week) show an advance of 6s. in 40 years (54-hour week then). Is there another skilled trade in Glasgow with so poor a record? Yet we are denounced for trying to get fair conditions of labour." Some of these statements were disputed by "Morocco Bound," who pointed out that it was not the case that women's wages are "as low if not lower than 30 years ago." On the contrary, "women's wages are very much higher. In 1883 hand-sewers had 10s. to 11s, 56 hours; at machines they have now 14s. to 16s., 50 hours. When I was a member of the Union, some 12 years ago, the control was in the hands of clever and sensible men. Who is in power now? Why, the Socialistic element, who are never absent, never late, and never silent. I know very many of the members who never attend the meetings, and the dispute is the result. It is the members themselves who are to blame. When there was plenty of good work they themselves refused to do what they termed 'tripe,' or the cheap class of books."

In the *Glasgow Herald* of October 31st appeared a letter from a "Librarian," in which he complained that: "Much letterpress binding is degenerating into a cheap-jack fake. I have before me a well-known, most expensive, standard book which has been twice bound. The general get-up in calf and gold is most impressive, but the sewing and the back fixings each time would not have been adopted by a penny toy maker. Cheap cotton thread now takes the place of linen, and the inevitable weakness of the sewing is provided for by hidden slobberings of paste or glue that would horrify a billsticker. I may be told to change my binder, but when I do I find that I have only changed the girls and unskilled workers who are set to the work. Evidently their employers believe that books, like trees, should shed their leaves every autumn. I have read the employers' statement. When they complain that the men will not tell them how to provide for their work should they return to giving the public value for what they pay, the innocent seems once more to have got abroad among us. I would respectfully suggest that part of the present excessive profits might be utilised in encouraging lads to enter once more on the terrifying length of a bookbinder's apprenticeship. It is an outrage on men from whom the employers insisted on the long apprenticeship to tell them now that girls and unskilled lads are quite good enough for most of the work. They may be good enough for increased dividends, but they are not good enough for the book-handling public, who are paying longer prices for badly bound books than they used to pay for those that were a joy to handle."

This anonymous Librarian came in for a severe castigation at the hands of Messrs. Gowans and Gray, Ltd., a well-known Glasgow trade bookbinding house. After pointing out that "Librarian's" letter was ludicrous and "written with little knowledge," Mr. A. L. Gowans (a director of the firm in question) proceeded to remark that in letterpress binding, "Librarian" confused two different branches. "In purely hand work, which includes the half-calf binding to which he refers, cotton thread should not be used. If 'Librarian's' binder has used it, then 'Librarian' should stipulate that linen thread be used, or go to a respectable firm. In publishers' cloth work, however, double cotton threads have been used ever since the book sewing machines came into general use. No bookbinder can afford to use anything else in this class of work, and machine sewing is quite strong enough for any ordinary purpose. In most cases the cheap paper which is so much used nowadays by publishers gives way before the thread. The length of apprenticeship in the bookbinding trade is seven years. This is the same period as in the printing trade, and we have never heard a single employee complain of its 'terrifying length.' In fact, the men are not all anxious to have more apprentices in the shops, and the number allowed in each is strictly limited by the men's union."

A strong denunciation of the local trade union binders, and their methods of forcing the hands of the employers, appeared in the Edinburgh *Evening Dispatch* of October 28th. Said the writer of the article: "Edinburgh bookbinders are proposing to attempt the impossible: they wish practically to exclude women from the trade. Their demand at present is for restriction, but as one of their number has publicly declared, they 'want to keep the craft to themselves.' Women are largely employed in bookbinders' shops, and the work they undertake is, as a rule, as much suited to them as to men. In Scotland some establishments have freed themselves from the yoke of the Union, and, being in a position to conduct their business as they please, they find it to their advantage to employ a much larger proportion of female labour than formerly. Even the men themselves, who are demanding the restriction or entire discontinuance of female labour, admit that women are better adapted for some portions of the work than men, and yet they insist that the opportunity of doing that work is not to be allowed them. . . . Such a demand, if enforced, may, for the time being, prove a serious hardship to the women at present employed, and may even deceive the men into the belief that they have scored a victory, but in the long run they are sure to be the sufferers. A trade in which women can be employed to such advantage will not long allow itself to be tied down in this fashion. It is too late in the day for men to adopt any such policy."

The Secretary (Mr. W. W. Marr) of the Aberdeen Branch of the N.U.B.M.R. has issued the following statement of the position, as it affects that city. "In a footnote issued with the employers' statement and refusal, they distinctly say that if the men have a grievance they are quite willing to remedy it. The true position of matters in Aberdeen, I am sorry to state, has never been put before a meeting of the Alliance of Masters, else they could not afford to make such a statement. As to the general work of bookbinding, I would have to go into bewildering technicalities and details before I could enumerate the encroachments which have been made in the trade, especially during the last few years, and I defy anyone to deny that the amount of work done by females in some of the establishments in Aberdeen is unknown in the worst places of Scotland and England. In the paper-ruling trade, every branch is being done by females in Aberdeen. There is no other town in Great Britain where this is to be found. Regarding the guillotine, which, as everyone must know, is one of the most exacting and dangerous machines in existence, as far as Aberdeen is concerned there is not a single man that we are aware of who works this machine in a printing or bookbinding establishment—of course omitting the actual books which the bookbindinder is working at. We have no wish to stop this, so far as printing work is concerned, but we insist upon all bookbinding and paper-ruling work being cut by men. In Edinburgh and Glasgow the men complain that females employed at our work are only paid about half the wages paid to men. In Aberdeen the average wage paid to females would not exceed a third of the men's wages. The employers claim that some of the work is better done by females. Then pay them at the same rate as the men, and we shall not object. Now, we are to make a determined fight, *not to exclude the females*, as stated by the employers, *but to keep the females from ousting the men from their legitimate work;* also to put the trade on a more equal basis, preventing the unfair—and, may I say—unscrupulous cutting which at present prevails. We do not wish any female to be thrown out of work, but are requesting that those who are doing the men's legitimate work be eliminated. Two employers in Aberdeen have agreed to work their establishments on the lines suggested by the Union."

The statements made in Mr. Marr's letter were challenged by a writer in the Aberdeen *Evening Gazette* of the 8th inst., who denied that paper ruling was entirely done by females in that city (it being generally carried on under male supervision), also that the wages paid are lower than in Edinburgh or Glasgow, the contrary being the case, *i.e.*, 6s. a week against 4s. 6d. Mr. Marr, in a further letter, practically admitted this, but stated that although about 50 ruling machines were operated in Aberdeen by females only two journeymen were employed, and their minimum weekly wage was only 32s.

Having regard to the attitude taken up by the Scottish bookbinding trade unionists towards female labour in the trade, it may be of interest to quote the following from a recent issue of the *International Bookbinder*,

Digitized by Google

the official organ of the International Brotherhood of Bookbinders of the United States and Canada. The writer is of course a thorough-going trade unionist. He says (the italics are ours):—"For the benefit of those who have not given the matter a thought I wish to remark that where there are girls employed, unorganised, and the male members of the same place are, that the males should do all in their power to organise the girls. For instance, *the bindery girls' trade is one which does not interfere with the males in any way whatsoever, and it should be the place of the males to look after their interests.* We all know of how our sisters, wives, and mothers have suffered, due to the conditions of the workshop. This is all due to our males' gross neglect in not looking into their affairs. I wish further to remark that the girls have lost ground through the introduction of machinery of simple types, which are now being installed and operated by the girls for a very small wage, which results in a large profit for the employers, and if we let such go on it will not be long before we will be in a critical condition. I would like to read the opinion of other members in regard to a closer affiliation with the girls." It seems tolerably evident from this that American bookbinding trade unionists look with very different eyes upon some of the points touched by the Scottish dispute. In America, the bindery girls and women have their own special branches of the Brotherhood, managed by female officials, and are always able to air their views in the Union's official organ. Mr. Sovey, the President of the Brotherhood, in the course of a recent tour, paid a visit to Cambridge (Mass.), where the local women binders branch of his organisation got up a formal reception for him. In that town an agreement was lately signed by the secretary of the branch in question, providing for a minimum weekly wage of 38s. for the female workers in the trade. Even this is considered little enough, having regard to the cost of living, the original demand being for £2 1s. 8d., which the employers said competition would not allow them to pay. The union rate for male binders at Cambridge is £3 15s.

One of the latest things in the way of bookbinding strikes was that of the students of the Bookbinding Class at the Bradford Art School, who came out at the end of last month in support of a protest against the attendance of costing clerks at the Lithographic Class. The Bookbinders' Union local committee considered the matter, and resolved "that we ask the instructor of the class in bookbinding at the School of Art to withdraw from teaching the students pending a settlement of the present trouble."

We understand that negotiations are proceeding with a view to a revision of the existing wages scale for bookbinders in several Lancashire towns, including Burnley and Blackburn.

The Federated Committee of the four London branches of the National Union of Bookbinders and Machine Rulers have now entered into occupation of their new premises at 21, John-street, Theobald's-road, W.C., where their offices are located on the first floor.

Representatives of trade union approved societies having head offices in and around the city met in Holyoake House, Manchester, on the 3rd inst., to consider the desirability of forming an association of trade union approved societies with a view to exchanging opinions on the administration of the National Insurance Act and taking combined action where necessary. The President, Mr. W. Mellor, of the National Union of Bookbinders and Machine Rulers, said that it was absolutely necessary for trade union approved societies to have behind them some kind of organisation for consultative and other purposes. He was a member of the trade union section of the Manchester Insurance Committee, and it was his experience that while the friendly society section and the collecting society section combined to keep their views before the Committee, the eight trade union representatives had no means of knowing the organised opinion of trade union approved societies, and had to form their own judgment. It would be useful if they could consult an association of the kind which it was now proposed to form. A resolution was passed to form such an Association, and a sub-committee was elected to formulate rules.

During last year, the various changes in rates of wages in the bookbinding trade affected 416 workpeople, and resulted in a total increase of £41 per week, or an average of about 2s. The largest increase amounted to 2s. 6d., which was obtained by the bookbinders and machine rulers at Swansea, whose original wage was 30s.

Employment in the London bookbinding trade was reported to have been fairly good during September, although the percentage of unemployed Trade Unionists rose from 2·6 to 2·8, out of a total of 3,403. In the provinces the percentage increased from 3·0 to 3·5, out of 2,981. In September, last year, the percentage was in each case 3·2. At Edinburgh and Glasgow trade was very good, but in Dublin it was slack. With fancy and morocco leather finishers in London it continued bad, but remained fair with other fancy leather workers.

The imports of book cloth during October amounted to 33,050 yards, value £858, as compared with 45.152 yards, value £1,138, in the same month of last year, and 57,026 yards, value £1.458, in October, 1911.

A London firm of account book makers has lately been exhibiting in a shop window in Holborn a tanned and dressed pigskin, with the view of demonstrating the kind of leather which they recommend for covering ledgers, cash books, journals and other office books from which hard constant wear is demanded. The skin has attracted a good deal of notice, and will, it is to be hoped, assist in creating amongst the users of heavy business books a desire to use more durable leathers than some of those which are all too often devoted to the purpose.

The Hon. Miss Norah Hewitt, one of the most skilful amateur lady bookbinders, had an exhibition of her work at the Dudley Gallery last month. Miss Hewitt, who is a daughter of Lady Lifford, had the honour of binding the Coronation service for Queen Mary and the Archbishop of Canterbury. She also bound a presentation book for the German Emperor, and Queen Alexandra has a specimen of her workmanship. She was specially invited to exhibit at Ghent.

"Easy Bookbinding," a course for amateurs, is the title of one of the chapters in a new serial publication, the *Amateur Mechanic*, published by Messrs. Cassell and Co. There is an illustration of a woman operating a sewing frame in a trade binding house.

A short-lived strike of bookbinders took place in Christiania a few weeks since. A new scale of wages was under discussion between employers and employed, and the representatives of the latter inserted in the proposed agreement a clause providing that they be allowed a week's holiday every year on full pay after one year's service. The employing bookbinders were mostly willing to concede this, but the General Federation of employers, to which the Bookbinding Section was affiliated, and to which it had to refer the matter, refused to sanction the clause. Indignant at the idea of being deprived of their long-sought-for annual vacation owing to the action of people outside the trade, about 600 male and female bookbinding employees quitted work. Ten days later the General Federation of Employers gave in, and the strikers accordingly resumed work. The new scale lasts until the end of August, 1919. Under it the nine hours day obtains in the trade, and the minimum weekly rate of wages is, during the first year following apprenticeship, about 23s. 6d., being an increase of about 1s. 1d.; the second year, 29s. 6d.; the third and fourth years, 33s., against 29s. 6d. previously, rising finally to the maximum of 35s. Female hands get 6s. 6d. during the first six months, and 8s. 9d. during the second six; the second year, 12s. (previously 11s.); the third year, 15s. 3d., instead of 13s.; and the fourth year 17s. 6d., in place of the former 15s. 3d. Assistants and labourers will in future have a minimum of 20s. 9d., instead of 19s. 6d., going thence up to the former maximum of 30s. 6d. in the fourth year. Those who already received more than the maximum when the new scale came into force had their pay raised, the men by 2s. 3d. a week, and the women by 1s. 8d. Piece work rates were increased by 15 per cent. Overtime, previously paid at rates varying from 40 per cent. to 75 per cent. extra, will in future be charged at 50 per cent. extra for the first four hours following the conclusion of a normal day's work; Saturday overtime, 75 per cent.; and double pay for work at other times.

The wages and hours agreement between employers and employed in the bookbinding trade of Sarajevo, Bosnia, expired on the 6th inst. The employees trade union was dissolved some months since, by order of the police, but the late members have been since trying, by concerted action, to obtain a betterment of their lot, notably in the direction of a minimum weekly wage of 23s. 4d.; proper payments of overtime and work on holidays, the regulation of apprenticeship, etc.

The Committee of Commerce of the French Chamber of Deputies having reported favourably on the business prospects of the International Exhibition of the Graphic Arts, to be held at Leipzig next year, the Chamber has voted a sum sufficient to equip a representative French section. The Report of the Committee contains a reference to Bookbinding *de luxe*, which, it is stated, is not usually much in evidence at these gatherings. However, Parisian work of this class always shines with the greatest brilliance, being inimitable, and carrying on, in one direction, the traditions of the work of Chambolle, Gruel, and Lortic. Another of the most marked tendencies of modern French high-

class art binding is the use of pictorial representations, such as is frequently exemplified in the work of Chas. Meunière, Kieffer, Blanchetière, and the School of Nancy. In addition to these two distinctive types of binding, France has that of the "greatest master of our epoch," Marius Michel, which is especially noteworthy for its solid style, ingenious composition, and harmoniously arranged colour-mosaics. Abroad, according to the Report, there is very little to approach French work, even in that of the Belgian house of Desamblanx, or the English ones of Rivière and Zaehnsdorf. In Germany, there is still less *de luxe* binding rivalling the French, so that the latter is always triumphant at the Exhibitions.

The graphic trades school at Utrecht, which has been giving instruction in type composing and presswork, will shortly install machinery and apparatus to use in teaching bookbinding.

One of the largest binderies in the world is that of E. A. Enders at Leipzig. This concern employs from 450 to 500 people and has about 200 machines. A daily average of 700,000 printed sheets is worked up, or 210,000,000 per year. In finished shape this represents about 20,000,000 books and pamphlets.

At the end of September the Berlin School of Bookbinding celebrated the 25th year of its foundation by an Exhibition of its work during the last quarter-of-a-century. Although started in quite a small way, it has now some 300 pupils, and sixteen instructors. The Art Binding section dates from 1904, Herren P. Arndt and P. Kersten being the first teachers in this branch. Under the careful oversight of the latter, this is now one of the most important departments of the School, and the value and interest of its work can be judged from the examples frequently illustrated in the *Archiv fur Buchbinderei*. Herr Kersten is one of the officers of the Jakob Krausse Club of Art Binders, and is working energetically to get that organisation to make a united display of binding work at the International Graphic Arts Exhibition in Leipzig next year. The cost to each exhibiting member is estimated at 10s., which it is hoped to cover by the sale of a catalogue of the exhibit in an edition of from five to ten thousand copies.

Following the example set at the Turin Exhibition a year or two ago, it is intended to have an old-time bindery in operation at the International Exhibition of the Graphic Arts Trades at Leipzig next year. The workers will be arrayed in costumes imitating those of ancient date.

A writer in the *Printing Trade News* gives an interesting account of how the selling price of trade bookbinding work was brought up to its present level in New York. About 1897, what was known as the "Forty Per Cent. Method" was introduced. The binder added the cost of labour to the cost of the material, and added 40 per cent. to the result. A little later, in cases where the costs of material and labour were about equal, 50 per cent. was added to the former and 25 per cent. to the latter. So far, the general expenses of running a binding business had not been taken into account, but in 1907, after giving careful consideration to this point, a canvass was made of the larger binding firms, in order to ascertain what proportion the expense account bore to the pay roll. It varied from 45 per cent. to 55 per cent. The average was a little over 50 per cent., but this percentage was selected as near enough for practical purposes. The labour cost (not the productive hour cost as we now understand it, but just the pay roll cost) was known. The material cost was known, and the expense cost was now said to be 50 per cent. of the labour cost. Hence, these three items added together gave the total cost of a job. So far the New York binders had set the pace on cost finding for the purpose of estimating and charging. And they realised that the result they had arrived at was simply cost, and that so far no profit had been provided for. The consensus of opinion was that such a manufacturing business as binding should warrant a clear net profit of 10 or 11 per cent. Hence, they decided to add 12 per cent. to the cost, in order to get about 11 per cent. on the selling price of the entire output. It was further understood that where buyers habitually deducted 2 or 3 per cent. for cash, this sum should be added to the estimate. In spite of all this careful estimating, however, it is said that New York binders make smaller profits than binders in any other part of the United States.

By a recent decision of the American Federation of Labour, the International Brotherhood of Bookbinders is given jurisdiction in all establishments in which a bindery exists, whether they are termed "printing offices" or otherwise. It is now some time since the Brotherhood adopted and registered a label known as the Bookbinders' Union Label, to be used on such books, desk pads, memoranda books, minute books, journals, ledgers and other stationery, as contain no printing. Such stationery is now largely used by international organisations, central and federal unions, and has been endorsed by the American Federation of Labour, the Union Label Trades Department and the Board of Governors of the Allied Printing Trades Association.

A competition in "Printshop Knowledge" was recently instituted by our contemporary, the *American Printer*. One of the questions set was "What is meant by half-bound?" and the following is the answer sent in by the first prize winner, Mr. William A. Woodis, Instructor of Printing at the Baron de Hirsch Trade School at New York. "Half-bound is a style of bookbinding of German origin, wherein leather is used only for the backs and covers—the parts receiving the most wear. The common method, as specified to-day, is as follows:—Half-binding: Book sewed with kettle-stitch or whip-stitch, tarboard sides covered with cloth; smooth roan leather tight back; paper turned over edges; cover, with or without leather corners, extending over edges of book; lettered on back in gold. Books sewed with kettle-stitch, which is the method used for folded sections, allows the book to open flat. Books sewed with whip-stitch allows the book to open almost flat, and is the method used for books consisting of many single leaves. Roan leather is the inside of a split sheepskin, coloured (generally reddish brown, hence the name roan). It is sometimes grained in imitation of other leathers. The cloth is a woven material pressed and embossed in several kinds of finishes, and is the most used of any binding material. It is made in numerous colours and shades. The lettering is placed on the back with heated dies (binder's stamps) in an embossing press. Brass type is also used in the lettering. This operation is generally done before the covers and back (technically known as case) are placed on the book."

A woman bookbinder at New York, Elizabeth Troudle, persistently refuses to wear the costume usual to her sex, preferring instead to go about clad in male attire. For this reason she has been imprisoned several times, and on the last occasion addressed a letter to President Wilson, from Brooklyn Prison, asking his formal permission to wear male

costume in future. She explained that as a woman she could not earn above 23s. a week at her trade, whilst if she were able to pass herself off as a man she could make £3 2s. 6d.

A Master Bookbinders' Association has recently been formed in Melbourne. On the occasion of the 31st annual dinner of the Victorian Master Printers' Association, Mr. J. McLaren (President of the Bookbinders' Association) said on behalf of his Association he had to thank them for the cordial manner in which they had honoured the toast of the "Allied Trades," and he was sure their good wishes were heartily reciprocated. As most of them were aware, his Association had only recently been formed, and he would take that opportunity of saying that it was formed without a particle of antagonism to the Master Printers' Association, and he believed he was expressing their sentiments when he said that they hoped to work harmoniously with the master printers, and, if the occasion should arise, to lend support to that Association in anything that may be considered proper for the welfare of the trade in general whether it be a matter of aggression or defence.

The Australian Customs authorities have decided that bookbinders' sewing presses are dutiable under No. 306A of the Tariff, at the rate of 35 per cent. *ad valorem*, or 30 per cent. if of British origin.

MORE ABOUT
Modern Italian Binders and Binding

In the September number of *Il Risorgimento Grafico* (Milan), Sig. G. Guido Giannini continues his interesting series of articles on the Italian bookbinding of the nineteenth century. After some remarks on the so-called "Gothic" style, noticeable chiefly for the extraneous ornaments affixed to the bindings before they were covered, the borders of medallions of ecclesiastical type, etc., he goes on to speak of the incised leather covers which a few Italian artisans in Italy, on leather intended for the ornamentation of bags, jewel cases, etc., as well as books, but mostly in bookbinding establishments. A good example of these cut leather bindings is the one illustrated herewith, executed by the firm of Aristide Staderini, of Rome. Most of the high-class art binders of Italy are either at Rome or Florence. One of the best establishments in the former city is that of Enrico Andersen (who was one of the first foreign binders to settle at Rome in the latter part of the nineteenth century) though to-day its style of work is almost entirely Italianised. Staderini was among the first to introduce the modern Italian style of binding in gilt parchment, and was also the founder of one of the most important trade binding houses in the country. The modern revival of the art at Florence was mainly due to French immigrants, but practically all traces of their style have disappeared from the Florentine bindings of to-day. Two of the oldest firms in this line in that city are those of Tartagli, founded in 1832, and of Siannini, dating from 1856, and well known for the excellence of their work in parchment. Siennese art binding is naturally influenced by the many extant examples of the ancient local style (see our Bookbinding Number of January last), whilst Milanese work is largely confined to edition binding, although the firm of Torriani and Co. turn out some excellent art bindings.

In a further article Sig. Giannini proposes to deal with the work of that "little cohort of youths," to whom, he says, is due the new direction which Italian art binding has taken since the commencement of the present century.

A Modern Italian Cut Leather Binding.—By Staderini, Rome.

made a specialty of from about 20 years ago, although this class of decoration is not confined to the cover of books, but also applied to furniture leathers, a branch of art which was once the glory of Italian craftsmanship. A good deal of this sort of thing is still done

Machine Rulers, Bookbinders, Printers, and Kindred Trades Overseers' Association.

(Special to the *British and Colonial Printer and Stationer.*)

The Machine Rulers, Bookbinders, Printers, and Kindred Trades Overseers' Association is one of the most enterprising and progressive bodies we have in the City of London. One could hardly believe that an association could rise to importance so quickly within a decade and fulfil the following objects: (a) Members are afforded by means of periodical meetings opportunities for mutual intercourse, combined with entertainment and social relaxation; (b) members are assisted when temporarily out of employment; (c) legal assistance is given to members in cases of dispute; (d) a sum is provided for a widow, or nominee, of a deceased member. Added to these, there

Mr. J. E. Dixon, *President.*

is the educational value, and these features about sum up what the Machine Rulers, Bookbinders, Printers, and Kindred Trades Overseers' Association has accomplished. Naturally the success of the Association is due to the interest the officials and members have always manifested in it—and therein lies the secret of its progress.

The President for 1913-14 is Mr. J. E. Dixon, and a more impartial and painstaking official could not have been elected. Mr. Dixon has a happy way in conducting the proceedings of a meeting, and, of course, where there is a good chairman,

with a little humour, and one that can gauge his vocabulary as to the extent the length of a speech should be, pleasantness is ensured. Needless to say, Mr. Dixon is filling his office admirably, and he is a favourite. He commenced his business career at the Army and Navy Printing Works, and since then he has had a good "schooling" at many well known establishments. He is now head of one of the large departments of Messrs. Richard Clay and Sons, Ltd., Brunswick-street, E.C., where his disposition and his resources as a business man have won the admiration of those engaged under him and the confidence of his superiors. Mr. Dixon has also a warm heart for those who have

Mr. Geo. A. Eden, *Secretary.*

fallen on evil days, as is instanced by the fact that in the most inclement season of the year he is usually to be found in the extreme end of London presiding at charitable concerts, and in many cases pays the expenses of the artists out of his own pocket. Then, again, in the season we have only to recall the concert in the City organised by him on behalf of his own association, and the happy nights spent in the cause of charity. But Mr. Dixon is still young and in the hey-day of his energy and progress.

The Secretary of the Association is Mr. George A. Eden, who served his apprenticeship at H. Richardson's, an old established firm in Greenwich, principally to the vellum binding. Here he also obtained a good knowledge of warehousing and general work, besides letterpress binding and finishing. At the end of seven years he was in charge of the binding and warehouse departments at the Acme Tone Engraving Co., Watford, but the attractive work of London appealed more to him, so he returned to the metropolis and joined the staff of Messrs. Jas. Truscott and Sons' Tonbridge Branch for a short while until he eventually became head of a large department in another firm in the Fleet-street region. Mr. Eden is an ideal secretary. He is full of energy, vim, and work, and his courteous manner has made him hosts of friends. The membership has about quadrupled since he took up the office of secretary, and it is very doubtful if his equal will be found when the post becomes vacant.

Co-operative Bookbinding.

The Editorial of a recent number of our Californian contemporary, *Bindery Talk*, consisted of a long suggestive article on co-operative bookbinding, from the American standpoint, which should not only appeal to the American librarians for whom it was intended, but should also interest English ones. The writer estimates that over five per cent. of the gross income of American libraries is paid out for bookbinding, and this means three-quarters of a million dollars (£150,000) of which amount probably not over a third goes to first binding of periodicals, leaving a half million for rebinding alone. After pointing out that small libraries cannot find a solution of the economical binding problem in the provision of a private bindery in each library, it is suggested that several libraries should pool their bookbinding appropriations to a guaranteed total of not less than $4,000 (£800) per year, and contract with some binder to devote himself exclusively to their work at an agreed scale of prices, the binder to furnish a plant located intermediate between the contracting libraries. "No difficulty," says the writer, "will be experienced, under proper arrangements hereafter explained, to obtain a binder who will contract at prices which will net him only good wages and fair interest on his investment; especially in view of the fact that he will receive an assured quantity of work, and is in no danger of losing anything through bad collections. The contracting libraries will be protected through proper specifications, and will obtain the best of service by restricting the binder to their exclusive work, or, at most, to library work." It is suggested that two per cent. of the money allocated by each library for bookbinding should be spent as an investment. "The two per cent. of the three quarters of a million dollars would be $15,000 a year (£3,000), and here are some of the things it would do":—

1. "It would pay for an executive, office assistant, a monthly publication, miscellaneous printing, and maintain an office, located probably near the geographical centre of the United States.

2. "It would pay for a travelling field man, an organizer to start binderies and set them going wherever desired, both in libraries and for groups of libraries, as suggested above.

3. "It would pay for one or more expert binders and repairers, who would at times assist the field man, on other occasions conduct demonstrations before gatherings of librarians in various parts of the country, and for the remainder of their time would carry on experimental work in a model bindery in connection with the executive office. These all forming an organization under the direct charge of the executive, and answerable to directors selected from among librarians, would be able to return many times their cost to the contributing libraries." After outlining the work which could be undertaken, another suggestion is made for the raising of the necessary $15,000, viz., to make a fixed contribution of one dollar per month (4s.) from each of 1,250 large and small libraries; or, a scale of annual contributions might be graded in relation to total income.

THE ELIMINATION OF

Electricity in Ruling Rooms.

By John J. Pleger.

Under certain conditions pressmen and rulers have experienced considerable trouble with electricity, which is generated in the paper during its manufacture, and remains while stored in bulk until dissipated or released. In small lots of paper the trouble is not as pronounced as in large lots. The friction incidental to the handling of the sheets and the rotary motion of the press and ruling machine add to the static electricity. This causes the sheets to stick together, adhere to the feedboard, and gives trouble in delivery. It also causes offsets when the paper is printed, and subsequently the sheets stick together when fed into the folding machine.

It is the experience of rulers in some localities that on cold, dry, wintry days the friction caused by the passing of the blanket over the segment board charges the machine with electricity. Consequently, the sheets, instead of being carried by the lower cords to the apron,

Bookbinders' MACHINERY and SUPPLIES

We have a very fine range of machinery for the Binding Trade, and solicit your enquiries. We can meet all your requirements whether large or small.

Caxton-Beatrice Blockers

Made in England from the original patterns —not a German imitation. Four supports to head, sliding feed table, powerful inking system.

Caxton Rotary Perforator

For run-through and stop work. Gives a clean reliable, slot-like perforation. Easy to adjust, speedy in operation.

Stitchers, Cutters, Presses

Large and small, hand and power.

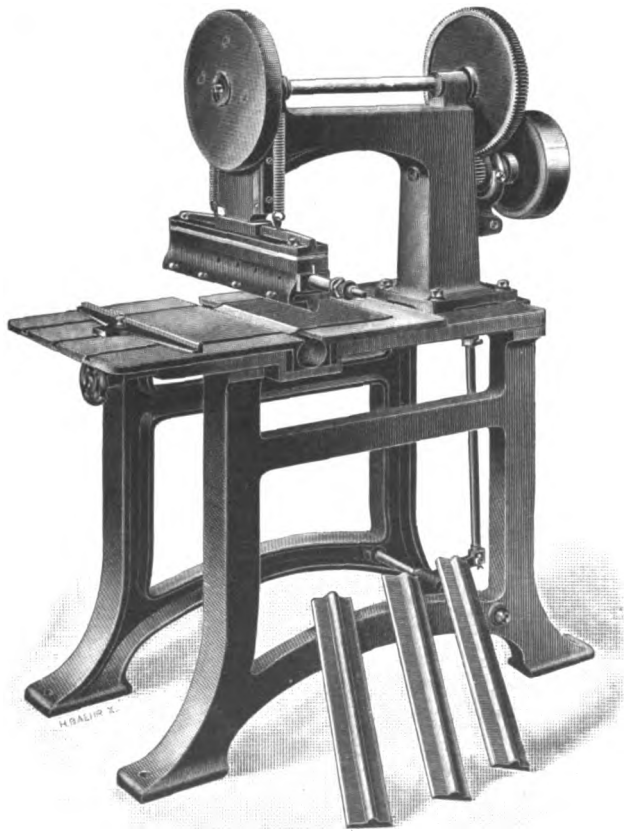
JOHN HADDON & CO.

Specialists in Labor-Saving Machinery.

SALISBURY SQUARE, FLEET ST., LONDON, E.C.

Digitized by Google

follow the upper cords or blanket. This trouble is so pronounced that as soon as the machine is started, to touch any of the steel parts gives a shock; besides, it draws the ink from the pens. Under such conditions it is difficult to stop the double or triple pens from running blind.



Weather conditions are largely responsible for this trouble. The cold, dry atmosphere of the winter makes it more difficult to get rid of the electricity than in the moist air of the summer. Various methods to eliminate this trouble have been devised, but have not proved successful under all conditions. To draw the electricity, copper wires are sometimes placed against the bed cylinder and delivery table of printing presses, and run into the ground. On the ruling machine the wire is placed above the feed table across the machine and back of the beam. Equal parts of glycerine, wood alcohol and raw linseed oil rubbed on the draw-sheet, packing and feed tables, and segment board are sometimes efficacious in eliminating friction and attracting and holding moisture, which offsets the static electricity.

In addition to the above, two or three cords should be put around the ruling machine to hold the sheets in place until they pass to the apron. This will prevent the "dog-earing" of the corners, which frequently happens when ruling paper that does not absorb the ink as fast as the speed of the machine requires. To do this, feed the end of the thread, which is attached to a pin stuck in the blanket, into the machine until it reaches the lower cords; then remove the pin, and follow the lower cords with the thread to the apron. Pass the thread around the blotter covered roller, around the apron, roller near the lay-boy, and to the apron adjusting the roller; then tie the ends together.

A gas heater, consisting of a pipe in which holes are drilled the entire length, and a shield to protect the cords and blankets, attached above the apron near the lay-boy, is likewise an efficacious remedy.—*International Bookbinder.*

THE "Lipsonia" Rounding Machine.

An appliance that deserves the attention of the trade is the "Lipsonia" Rounding Machine for forming the backs of book cases and that will be found of the greatest use in every bindery. The machine rounds the backs of finished cases in all sizes, and not only supersedes the old method of rounding by hand over heated pipes, but gives far greater output and perfect work. It is simple in construction and can be operated by a boy or girl, the cases being laid on to an adjustable gauge, so that the centre of the back corresponds with the centre of the "former" as it descends for the purpose of rounding the back. The head into which the "former" is fixed can be heated by gas, steam or electricity. While in operation the "former" moves quickly up and down, but ample time is allowed while the case is under pressure to make the rounding effective and complete. The speed can be regulated by a step pulley, and the machine can be stopped in any position by means of a friction clutch. Spoilage of cases is obviated, provision being made for the carrying off of any moisture which might result when rounding newly-made cases. Any size of book may be worked up to $17\frac{3}{4}$ inches in length and $2\frac{3}{4}$ inches in thickness. Those interested should apply for further particulars to Messrs. A. Edler and Co., Bath-place, Rivington-street, E.C.

The "Lipsonia" Rounding Machine.

Hints on Ruling.

Printing before ruling can be done on the ordinary run of work, especially large runs, but on small runs and small size sheets ruling first is preferable, says Mr. J. J. Pleger, late of the United States Government Bindery, Manila. If a job can be ruled eight, ten or twelve to the sheet, and it is deemed expedient to print it two, three or four on, it would be preferable to rule before printing. There can be no fixed procedure for this, as it depends on the character of the work; and the staff should take into consideration the cheapest and best way to complete the work. If an extra hour spent in the composing-room saves two or three in other divisions, that extra hour should be spent; and if by spending an extra hour in the press-room, three, four or five hours can be saved in the bindery, it ought to be done. Lack of binding knowledge is responsible for many improper make-ups in the composing-room. In the making up of all book forms, the method of handling the job in the bindery must be taken into consideration. Forms are improperly made up when they cannot be handled expeditiously in the bindery. A close study of binding methods will produce better results, as well as greater profits for the printer.

When customers require proof of ruling, mark a sheet with pencil and indicate the colours to be used thereon. It is neither advantageous nor profitable to furnish a sheet when pens are set, as holding the machine is a loss to the owner, and few customers are willing to pay the cost of waiting. Then, too, if changes are made they virtually require resetting of pens and making ready; or if the ruled proof submitted is passed, considerable time is lost in restarting the pens. The ink becomes dry and a scraper must be drawn through each pen to make an opening. The ruler must exercise great care in ruling, as the ink does not flow as readily through pens in which it has become dry. If proofs are desired on printed forms, it is advisable to set the type in the composing-room, draw a proof, and indicate ruling with pencil thereon. This gives the customers a chance to change copy before the paper is spoiled.

If you want your pens to strike evenly at the head and lift at the foot lines, says Mr. R. S. Engle, of Youngstown, Ohio (U.S.A.), you must have the pens set perfectly to the line from which you are going to strike; then see that all pens touch the paper evenly, and be very careful that the pens do not touch at the toe, or extreme point, while at the same time daylight is showing under the heel, or back of the ruling surface. After your pens are set, draw a sheet of fine sandpaper under the pens at an angle of about 90 degrees; this will round off any sharp points that appear. If the entire ruling surface of your pens rest on the paper, and the points of your doubles and triples are of the same length, then you should have good results. To obtain a lift and strike in a short space, I have secured good results in the following manner: First, remove the thumbscrew that holds the toe-plate in position, and see that the sharp (not the rounded) end of the plate will come in contact with the cams. The beam should be adjusted so that the end of the toe-plate will be over the centre of the cam-head. Now make a small wooden wedge about $\frac{1}{4}$-inch on the thick edge, $\frac{1}{2}$-inch wide, and as long as the toe-plate is wide, and place it between the toe-plate and its support at the end farthest from the beam, and fasten the toe-plate by using a $\frac{1}{4}$-inch machine screw about 1 inch long. A small wedge-shaped washer can be made from a $\frac{1}{4}$-inch nut filed to a thin edge, leaving the other edge its full thickness. This should be placed between the screw head and the toe-plate support. It will require about 30 minutes' time to make these, and they will last a long time. The whole philosophy of this arrangement is to bring the toe-plate nearer to a right angle to the cams, thus shortening the point of contact. A specially made toe-plate, bent to an obtuse angle of about 150 degrees, would produce the same results. By adopting this method on our machine we are enabled to lift and strike in a $\frac{3}{8}$-inch space, with the machine running at an average speed. The cams used for this kind of work should be filed down to at least $\frac{1}{16}$-inch surface or less.

Scale for Indexing Blank Books.

The following scale for indexing blank books is the one in use in the United States Government Printing Office at Washington, and is worthy of being standardised by binders, allowance being made for names running heavily on certain letters (Mc, Mac, etc.) in some localities:—

NUMBER OF LEAVES ALLOTTED TO EACH LETTER IN INDEXING BOOKS FROM 50 TO 150 PAGES.

Index Letters.	50	60	70	80	100	120	132	150
A	2	2	2	3	4	5	5	6

EVERY THURSDAY. PRICE TWOPENCE

The Choice of a Manager.

[COMMUNICATED.]

Take a look inside any of the busy commercial printing offices in Great Britain and you will find all is bustle and hurry from the message boy to the manager. Clerks and typists, male and female, pushing through their respective duties in the counting-house, while in the factory the same busy air is about the workers, composing by hand and machine, letterpress and lithographic, stereotyping, ruling and paging, guillotines, etc., all at top speed. When you come out to the street you take a look at the building and find a sign-board announcing the fact that the firm you have visited are stationers, printers, lithographers, bookbinders and rulers. On making enquiry we find that each department is carried on under the supervision of an overseer, who is a practical man in the business he supervises, and this being a big concern, whether privately owned or belonging to a company, requires a manager who is, or should be, the business director of the whole establishment. But what are the qualities necessary in a man to fit him for management. The first great essential is capacity for organisation; he should be a good disciplinarian, firm, yet kind, and aim at taking the greatest amount of work possible out of men and machines with the least possible expenditure of energy. Like Napoleon, he should be possessed of the power to discern character so as to be able to choose as generals, or we may say overseers, men best fitted for the particular duties he wishes them to perform. He should not be above giving a word of praise to any of the heads of his departments when they have accomplished some difficult task. I do not mean that he should make a habit of this, but —putting a time limit on it—if perhaps once in twelve months you heard the words "Well done good and faithful servant," you would not be so far left to yourself as to turn round and request an advance in your salary on the strength of the remark.

Another erroneous idea exists in the minds of some managers. They happen to be under the impression that they ought to be always finding fault. A continuation of such treatment robs a man of any initiative or constructive ideas, and puts his mind into such a confused state that he is in time totally unfit to do anything without the fear that he may be going the wrong way about it, knowing perfectly well that he will be told at the finish that he has done some part, if not the whole job, in a very stupid fashion. You can at once see that the manager is thus defeating his own ends in pursuing such short sighted policy.

Don't for a moment imagine that because a man is nagged at he is useless, because there is no manager under the sun charitable enough to keep a useless assistant. Next to organisation, is what might be termed confidential tact. He ought to have every confidence in his overseers, and treat them with the respect which their position demands, never forgetting that his own position would be quite untenable if he had not their undivided support. Snubbing, discourtesy, or studied insults, which some managers stupidly glory in, should be of his life a thing apart. It is not essential that he be a good workman, but if he is possessed of that rare quality combined with a general knowledge of the business he is in charge of, his value as a manager would be greatly enhanced.

When a vacancy for an overseer occurs in any of the departments already mentioned, there is no doubt in the minds of those who have the filling up of the appointment as to the calling of the person chosen, for he must be of the same craft as the department he is to supervise, but should a vacancy occur in the management, those responsible for the selection of a manager are faced with the problem, shall we appoint the head clerk or the cashier or the stationer, or any of the overseers, or shall we advertise, and if we decide to do the latter we will include in the advertisement that applicants must have held a similar position, and must state in what particular branch of the printing trade they have been trained? Supposing they choose one of the applicants. He comes to them with knowledge gained at the expense of the other firm or firms with whom he has been employed; his knowledge would depend greatly on his ability to see things with the observant eye. A good and retentive memory would be a great asset to him, thereby assisting to keep before his mind's eye his previous failures, and failures will certainly occur, even in a printing office which may be governed by a manager who has been voted an unqualified success. I do not infer that failures are necessary to a man's education, but they are certainly always useful as a study when looking for the weak joint in the armour. If we were all born to be infallible during our strenuous existence on this old earth of ours there would be no such thing as sorrow, despair, or any one of the thousand little evils with which we are afflicted at present. But the scheme of life was not ordained that way, and every day, in one way or another, we are constantly the victims of our own folly. Little acts of indiscretion, opportunities passed by, misjudgment, and, above all, carelessness, go to make up the reason for that word—mistakes.

There are no exceptions; it leaves its mark on us all. From the time we are able to talk and walk we go blundering along, and it is only a few of us that are clever enough to perceive the cause of our errors, and in a measure to prevent them. To this chosen few is allotted the privilege of fame and glory. They are the men who rise above the common crowd, the men whose judgment is sought for the weightier problems of life.

And yet they have only attained their superiority by careful, concentrated attention to their work, and at all times endeavouring to be accurate in their methods. There are men in the working world to-day who possess just as great brain power as those higher up, and are every bit as capable.

In a former paragraph I said that a doubt might exist in the minds of those responsible for the filling up of the manager's post, whether the head-clerk, cashier, or any of the overseers might be chosen. As an overseer, addressing overseers, I do not expect to meet with any opposition when I give it as my opinion that an overseer would make the most suitable manager, and in support of my opinion I will, without being in any way derogatory to the other professions mentioned, endeavour to establish the claim. Now then, we will first take a look at the business qualifications of the head clerk. He may or he may not have to meet the customers at the counter, it would be better for his own peace of mind if this was not included in his duties, unless the order happened to be a repeat one. Should a customer happen to ask a job in an impossible time he is not in a position to say offhand that it can't be done, he has to ask the question at the proper quarter. He is all right at making out dockets, can write or dictate a courteous and grammatical letter, and he might even be good at making out an estimate with a certain amount of guidance. But we know that the head clerk has not had the opportunity of gaining the necessary knowledge for management, and I don't see that he can lay any justifiable claim to be in a position to direct the intricacies of a printing office on an economic basis and secure profitable results.

We will now deal with the cashier. I may at once say that we reverence this gentleman more than any other in the office, and we give him a cheerful "thank you" once a week, and proceed to count what we have received in case he may have given us too much. He is a cool, calculating gentleman, you never see him bustling around, the very nature of his occupation demands surety, caution and deliberation, his mind is mostly concerned in getting money from customers, seeing that accounts are properly rendered, that the various insurance schemes or funds are paid at the proper time, wages, rates, rent and gas and electricity paid, not too soon, but just at the right time. He knows all the technical terms of the various materials used in the business, but he might not know some of them when he saw them, his duties are varied, he is an excellent servant as a cashier but his mind has never been allowed to get into the groove of running risks, and printers (letterpress and lithographic) are running risks with their work very frequently as regards folding, fitting, paper stretching, work drying, etc. Also our friend the cashier has not had his temper tried with the never ending worry of the machine-room, composing-room or warehouse, as I said at the beginning, his is not a mind accustomed to the bustle of the commercial printing office of to-day.

I am sorry to scratch this gentleman off the list, he is a good man at figures, but it would not be to the advantage of the printing office to have him at the head of affairs.

We now turn our attention to the stationer, he may have been trained in a paper mill, he knows all about tissues, carbonics, rags, grass or wood pulp papers, he can tell you when handling a sheet the weight per ream, he knows all the best mills for the various classes of papers, but unfortunately he looks on the best mills as the ones from which he can buy the cheapest paper.

An eight per lb. less than last time is a big consideration to him, he is placed where he is to make his department pay (just as others are), and it does not trouble him whether the paper he gets in is suitable for the working or not, the printer may complain about paper picking, the lithographer about creasing, stretching or soft coating, the binder and ruler pour their troubles into his deaf ear, but the stationer comes up smiling and tells you it is the same paper as the job was done on last; you certainly doubt it, but you can't prove otherwise, and you go back to your struggles with a heavy heart, while he (the stationer) turns up his books to see whether he got that paper an eight or a $\frac{1}{4}$d. cheaper by taking a larger quantity. The

Digitized by Google

stationer would make a good manager if he would pay more attention to the necessities of the printer and lithographer; if paper was bought for the requirements of the job the time lost mixing and concocting colour to get the work done would be saved. I have seen two reams of paper take five hours to lithograph because of the paper splitting, when passing round the machine cylinder. I learned later that this paper was 1s. 3d. per ream less than the previous time, so on paper there was a saving of 2s. 6d., but in time a loss of about 6s. total loss 3s. 6d. in five hours. Now this loss is not put against the stationer as it ought to be, but the printer's output or his income is down, and he bears the loss of the stationer's indifferent buying, and this fallacy of buying cheap paper is repeated day by day, complaints are lodged as usual, and with the usual result. You all know that there are more troubles with paper than I have mentioned here, and I feel you will agree with me, that this gentleman, who is largely responsible for the grey-haired, weary hollow-eyed printers, is not a person capable of filling the position of manager in a printing office.

We now come to a more interesting part of the selection. None of those who answered the advertisement were thought worthy of the post, the head clerk, cashier and stationer have been disposed of, and we learn that one of the overseers is to be appointed, but which one.

We will just glance briefly at the claims of the binder and the ruler, the former, as far as machinery is concerned, has generally a few guillotines, paging and perforating machines to arrange for, and our friend the ruler never appears to have a job in a hurry, his easy-going machines have a most soothing effect on the jaded nerves of the printer, but I am not here to offer any defence to the objections raised as to their ability, so far as business qualifications go, to fill the manager's chair, we will leave them in their present positions. The choice is now narrowed down to the compositor, letterpress printer and lithographic printer. You will observe I have placed them in alphabetical order.

Now for the compositor, he is generally looked upon as a man possessed of more than the average amount of brains than are to be found in most printing offices—in fact it is a common phrase in most offices that the composing department contains the brains of the establishment—but I credit the comps with the good sense to pass this quietly, for I know they are well aware that brains, and the intelligent use of them, are as necessary in other departments as their own. The comp, in the nature of his business, must at an early stage of his career fit himself by a study in grammar, spelling, punctuation and all that goes to the making of a good man, knowing when an article is proper in all its grammatical points and his eye trained to discern how an advertisement or bill should be displayed to advantage.

But the overseer, what are his duties and do they fit him for a manager? He frequently has to interview customers, but whether he does or not, he is the first to handle the work which is to be letterpressed and therefore has a grasp of the job at the start, he sees to the composition of the work, decides the size of the sheet, he may or may not consult with the letterpress machine overseer, who should have the most to say about the size of the sheet, but the work is imposed according to the instructions of the comp overseer, the job is read, alterations marked by a reader, corrections made, a proof pulled for revising and if no further further corrections are necessary, the work is handed over to the letterpress overseer.

That is roughly an outline of all work handled in the case-room, the overseer not being responsible for the printing or time of delivery, he might take an interest in a few of the jobs, but he is not the responsible man for the output or quality, so that the compositor's part really ends when the work is handed over to the machine department.

The letterpress machine overseer now tackles the work, up to now he has not had very much interest in it, he knew it was coming along but whether it would be in time to go into a certain machine or not, he is unable to say and perhaps when he does get it, the machine most suitable for the work will not be clear for a day or two, and, as it is urgently wanted, the printer feels himself getting into a mess and goes into overtime, if he has already worked his compliment he must run the risk of getting the work done in common time and get it finished before the customer clamours for it. As the work comes along from the case-room the letterpress machine overseer goes ahead planning the machines and the men for the various classes of work. He may not get the jobs from the compositors as he would like to get them, if he desires long runs, he possibly gets short ones or *vice versa*, thus his output suffers because the proper planning of the work is not done by the man who ought to do it. I hold that in an office where type printing only is carried on, the printer is the man who should be at the head of the printing department, and it should not, as at present, be carried on under two heads.

Why? you say, well the proprietors have sunk somewhere about two-thirds of their plant capital in the machine-room, and it is there that money can be made or lost more readily than in the case-room, and if the printer who knows how to plan his work and to keep his machines going profitably was in charge of the case-room, with an overseer subservient to him and carrying on work according to his wishes the amount of time lost by the present method would be lessened, because the work would come along more suitably for machines that it does by the present system, because one man would be entirely responsible, and that man knows exactly how to arrange for machines being worked profitably, but as matters stand meantime we see that the composing-room overseer does one half of a job and is responsible for that half only, the same state of matters exists with the machine overseer, and if letterpress printing only was carried on in this establishment, I would cast my vote in favour of the letterpress machine overseer as manager.

It was noted at the commencement that we have also a lithographic plant in the establishment, so the claims of the overseer in that department have to be reckoned with. If the order placed in his hands has been executed before, he, like the compositor, is the first to handle the work, but with this difference, he is the only one responsible for the whole lithographed job, he is thus saddled with a dual responsibility as compared with the compositor and printer.

The lithographic overseer decides the size of sheet, and the number of labels or pages on the sheet, he passes this sheet, after his transferer, or we might call this man the compositor, has patched his transfers in proper position, the overseer here reads the job, the work is transferred for the lithographic printer, who in his turn pulls a proof from his machine in what he considers to be the proper colour and position, this is shown to the overseer, who is again responsible for passing the machine proof. He (the lithographic overseer) has thus arranged and decided on the size of the sheet, passed the composing, imposing, reading, revising, printing and colour, and all the while he is planning to keep his machines fully employed, he thus takes the place of the composing and letterpress machine overseers in his own department. Let us look at the number of machines under his control, we will put the letterpress room at 30 machines, where we have the composing and letterpress overseers looking after their respective portions of the work, also an assistant in the machine-room, a specialist in three-colour work. You have thus three men responsible for work at certain stages in the letterpress department. Now the litho overseer is all alone. If anything goes wrong he can't blame the other fellow, and if he has only twelve machines he has a great deal more responsibility than all the three men in the letterpress department, with 30 machines. He has certainly far more trouble with his paper, he mixes all his own inks, and is not dependent on the ink maker for his proper shade for the work in hand; he has to fake ink to lift solid on hard or soft papers; he has to stretch or shrink paper which has become affected by atmospheric conditions; his temper and resources are tried every hour of the day, but the knowledge he has gained in his own business, his frequent intercourse with the compositor, printer, binder, and ruler makes him, I think, the best fitted to fill the manager's chair, to organise and conduct the everyday work of a modern up-to-date printing office.

I know that a large proportion of managers' situations are filled by compositors, the reason perhaps is use and wont. A manager who was a comp naturally chooses a comp for an assistant; he gets the opportunity of learning (shall I say) management which are denied the printer or lithographer. He next goes out into the world a full-fledged manager, and so the ball rolls on.

Now, I have mentioned the compositor, but my grievance is not with him. So long as he is offered the good situations, let him keep a hold of them; but I think those who are responsible for filling the vacancies in management might give the printer or lithographer an opportunity of showing the stuff he is made of. Healthy rivalry is good for trade, and I, for one, should like to see a printer or lithographer getting a plum just now and again.

Those who are not managers would, I am sure, be quite pleased to draw a manager's salary, and the best way to do so is to qualify one's self for that position by endeavouring to know more to-day than yesterday, thus becoming more indispensable, and should there be no one in this ungrateful world sensible enough to offer you a manager's chair, you will not have lost anything, because the greater knowledge acquired will make it much easier for you to hold your present post as overseer, always remembering that others equally deserving are not in such a fortunate position as yourself, and when you feel in the dumps, or fancy that the fates are against you, remember Shakespeare's stanza on adversity:—

Sweet are the uses of adversity,
Which, like the toad, ugly and venomous,
Wears yet a precious jewel in his head;
And this our life, exempt from public haunt,
Finds tongues in trees, books in the running brooks,
Sermons in stones, and good in everything.

A CLUB for the study of and instruction in the Printings Arts has just been formed in Milan, under the title of the Circolo di Studi Tipografic. One of the principal objects aimed at is the improvement of technical education, and the raising of the professional standard in all branches of the printing trade. The need of such an institution has long been felt in Italy, and Milan is the first city in that country in which the idea has been realised. Proposed future arrangements include lectures on technical subjects by leading authorities; theoretical and practical courses for instruction in the various branches of typography; competitions in typesetting, draughtsmanship, etc.; and the establishment of a technical library of books and trade papers. We wish every success to the enterprise.

ACCORDING to *Kemp's Mercantile Gazette* there was one failure in the printing and stationery trades of England and Wales for the week ending Friday, November 21st; the corresponding week in 1912 showed three.

GUILDFORD PRINTING CLASSES.—We have received the effectively got-up specimen book of "Examples of Work done by Students in the Letterpress Printing Classes during the Session 1912-13," at the Guildford Technical Institute. Enclosed in a grey cover with red panel title, the book contains a good variety of examples of display and solid letterpress work, and machine printing in colours and monochrome that is exceedingly creditable. In some "Notes upon the Work" we are told that it has been adversely affected by the absence of the instructor (Mr. S. W. Hartley), who was seriously ill practically the whole of the session, though a competent substitute was found after a short interval. In the three sessions during which the classes have been held 68 individuals had joined, seven having attended each year, 21 for two years, and 40 for one year only. Regret is expressed that more students (especially the young apprentices) do not survive the first year's work. The total weekly average attendance for the past session was 39. Five of the senior students secured Technical Exhibitions, awarded by the Surrey Educational Committee, value £1 10s. each, with additional £2 for travelling expenses in the cases of three of the exhibitioners, and the City and Guilds Typography Examination results were again satisfactory.

In AMERICA

There is published only one weekly paper representative of the interests of employing printers. It is the most popular Printers' Paper read in that country:—

Because it is the Trade Business Journal.
Because it has a splendid news service, with twenty-two paid correspondents.
Because it deals with the practical always.
It is the only Paper which holds the attention of the man who owns the plant.
The PRINTING TRADE NEWS does not attempt to teach printers to set type, but it is the foremost authority on the latest efficiency methods, the organization activities, progress in cost system work, approved methods of printers' advertising and anything and everything that tends to make the printing business a pleasant and profitable one.

It is pre-eminently the trade journal English machine builders should use to make their product known in America.

We have good mechanics. Let us have good business men. Let the **NEWS** come to **YOU** every week. Europe **$5.00** per year; Canada **$3.00**. 64 pages weekly.

Ambulance Work for Printers.

COMMUNICATED.

"Nothing new under the Sun." So said the ancient cynic. But like most axioms, this has different facets. That this is true may be deduced from the fact that while ambulance work is no new thing, the very latest and newest thing among the many useful offshoots of the practical printing world is the formation of a division of the St. John Ambulance Brigade in the City of London. We believe the division to be the only one in the "Square Mile," and its official designation is No. 68 (City of London) Division. This division has evolved from the ranks of the members of the Printers' Medical Aid and Sanatoria Association, an organisation that recruits its membership from all grades of the craft, and which now musters something like 5,000 members. As soon as the printers own medical aid society became an accomplished fact, a demand arose for first aid classes in connection with its operations. At first it was not deemed opportune to launch the new departure, but last year it was found possible to accede to the members' requests, and as a result of the course of instruction under the well-known Dr. James Cantlie, twenty seven first aid certificates of the St. John Ambulance Association were obtained out of 39 sitting for examination. From this group of first aid men the new division of the Brigade has started, aiming at securing a body of trained certified men, qualified to render first aid on any of the numerous occasions which occur during the storm and stress of life, whether such occasions be a minor accident in the daily venue of print, or one of the "crowded glorious hours" in national life when some part of the British metropolis is the cynosure of all the peoples.

That the division will be in good hands will be appreciated when it is mentioned that its divisional surgeon is Dr. Jas. Godding, of Leadenhall-street, Lieutenant-Colonel of the 17th County of London Territorials, and holder of other important appointments. The headquarters of the Division are at 68, Fleet-street, E.C., where the secretary of the Printers' Medical Aid and Sanatoria Association (Mr. Arthur O'Connor) will be pleased to reply to any enquiries not only with regard to the new Division, but also with reference to the first aid classes that the Association still organise. The men drill at the office of the Correctors of the Press, 83-85, Farringdon-street, at present, but it is hoped that arrangements will shortly be completed for more commodious drilling facilities. The energetic Ambulance officer, Mr. Edwin D. Callick, will be pleased to welcome any first aid member any Monday evening, and this should especially appeal to the men already holding certificates in first aid, irrespective of whatever position they may hold in the printing and allied trades. We need hardly say how heartily we endorse this excellent work, and commend it to our readers whether employers or employed.

SCREENS FOR PROCESS WORKERS.—We have at various times in these columns called attention to the excellence of the engraved screens manufactured by Messrs. F. E. Brown and Co., of the "Diamond" Screen Works, 5½, Guthlaxton-street, Leicester, and to the extremely reasonable prices at which they are offered to the trade, being supplied by the firm direct to the user without the intervention of the dealer. They are in use in many leading houses in this country and abroad, who regularly give repeat orders, the latter in itself testifying to their good qualities for the work that is demanded of them. An additional recommendation is that they are entirely British made, the firm being the only one engaged in the screen-making industry in this country. A new catalogue has just been issued giving sizes and prices of these screens, from 50 to 250 lines per inch, and this should be in the hands of every user of line screens, who will receive a copy on application at the address given above. Messrs. F. E. Brown and Co. also supply specially ruled screens for three-colour work, and make rulings up to 500 lines per inch, if required, and also repair screens of any make or size.

Ceylon's Demand for British Paper.

During the past five years the following were the quantities and values of paper, "all sorts," exported from the United Kingdom to Ceylon and dependencies:—

1912	62,750 cwts.	£44,118
1911	44,303 ,,	36,826
1910	47,073 ,,	42,075
1909	20,179 ,,	27,711
1908	21,892 ,,	31,279

British Paper in Straits Settlements.

The following figures show the exports of British paper of all sorts to Straits Settlements (including Labuan) during the past five years:—

1912	119,312 cwts.	£49,789
1911	100,138 ,,	42,925
1910	119,070 ,,	50,640
1909	14,811 ,,	20,931
1908	11,531 ,,	17,624

Trade Notes.

THE printers of Leeds are agitating for an advance of wages. The employers offer an advance of 1s. 6d. per week, bringing the minimum wage up to 37s., but this does not meet with the acceptance of the members of the Typographical Society, who have already voted for handing in notices failing a satisfactory offer.

Mr. M. C. RITCHIE, late of 107, Clifton-street, Finsbury, informs us that owing to the extension of his business he has removed to larger premises, at 145, Farringdon-road, E.C., where he will have spacious showrooms, and machines will be shown in operation that will be of interest to the bookbinding, box-making and kindred trades.

A CONVERSAZIONE in celebration of the twenty-first anniversary of the Borough Polytechnic Institute will be held on Friday and Saturday evenings (November 28th and 29th), at the Institute. About £2,000 are wanted to provide increased facilities for the students and members, and towards this purpose donations are invited, and should be sent to Mr. W. M. Richardson, secretary, 103, Borough-road, S.E.

A FIRE broke out last Thursday on the premises of Messrs. Hunters, Ltd., printers' engineers, St. Bride-street, E.C. It appears that some bottles of nitric acid, stored on the ground floor, became ignited, and caused dense fumes which the firemen had great difficulty in coping with. The fire was confined to the place of outbreak, and the damage will cause no hindrance to the carrying on of the firm's business.

MR. JOSEPH PENNELL, lecturing at the Victoria and Albert Museum the other evening, said there was scarcely an effect—etching, mezzotint, washed drawing, or photogravure—which could not be obtained by means of lithography, provided the artist was engaged in the reproduction of his own work. He believed that we are likely to see lithography once more to the front, as an ideal method of illustration.

THE *Cambria Daily Leader*, the first daily newspaper published in Wales, has issued a special number consisting of 44 pages. Twelve pages are devoted to the day's news, and a special supplement of 32 pages, gave a record of the industrial history of Swansea and district. The paper was published at the usual price, one halfpenny. The *Cambria Daily Leader* is an evening newspaper, published at Swansea. It was founded in 1861 by Mr. David Morgan Thomas, J.P., of Caterham.

A FIRE that caused considerable damage broke out, on Friday morning last, at the works of the Winterbottom Book Cloth Co., Blackburn-street, Salford. The Fire Brigade worked from about four in the morning until seven o'clock, when the flames were eventually subdued. Though the full extent of the damage cannot at present be ascertained, a representative of the firm said it might be put down at £20,000. The front of the gutted building has collapsed and quantities of brick and stone work fell into the narrow street but no one was injured.

ON Monday, Mr. Justice Bankes gave judgment on the counter claim raised by the *People*, Ltd., in the action brought against them by Mr. William Lotinga, seeking to restrain the plaintiff from breaking his agreement by disclosing his identity with "Larry Lynx," under which pseudonym he formerly wrote in the *People*. His Lordship granted an injunction with costs, to restrain the plaintiff from using the name of "Larry Lynx" at all in connection with the publication known as *Lotinga's Weekly*, or in any way to the prejudice of the defendants' proprietary rights in the name.

LAST week, at a general meeting of the Dramatic and Musical Critics' Circle of the Institute of Journalists, a resolution was unanimously passed as follows:—"That the number and activity of so-called 'Press agents,' receiving payment from theatrical and musical managers and artistes for procuring the gratuitous insertion of laudatory articles and paragraphs in newspapers, elsewhere than in the advertisement columns, is detrimental not only to the interests of the newspapers concerned and of drama and music, but also to those of the public.—That the Circle of Dramatic and Musical Critics recommends that theatrical and musical news should not be published unless received from a source responsible to the newspaper or from the official representative of a recognised manager."

MR. CALDER AND MR. GEDDIE, the two journalists who were on board the burning "Scotsdyke," last week, are members of the Press Gallery. Both are Scotsmen. Mr. Calder, whose father was on the *Liverpool Mercury* under Mr. Maitland half-a-century ago, has been in the Gallery for many years. Mr. Geddie is one of the staff of reporters employed by the *Scotsman*. Journalists are behoved to be ubiquitous, but this is probably the first occasion in which they were right on the spot when a fire has occurred at sea.

THE revenue derived from the Austrian State printing press in 1911—the latest return furnished, was £46,222—the gross revenue being £361,319, and the expenditure £315,097. In 1910 the next revenue was £33,167. The estimated receipts for 1912 are £366,666, and for 1913 £35 ,525.

TENDERS ACCEPTED—For supply of books, forms, and stationery for the County Constabulary of Warwick; Leamington Spa Courier, Ltd., Leamington. For supply of 10 tons of toilet paper and 1½ tons of greaseproof wrapping paper, for the Metropolitan Asylums Board; Drayton Paper Works, Ltd., College-hill, E.C. (recommended for acceptance).

MESSRS. J. G. SCHELTER AND GIESECKE, of Leipzig, have issued a new specimen book, in which is shown an elaborate combination border that is capable of being used in an infinite variety of ways, and from which designs may be composed to suit almost any description of work, from the light narrow ornamental outline to an artistic groundwork that will cover the entire paper. The border is also useful for working up with blocks and ornaments, and combinations of several colours may be achieved by its use. The specimen book gives many examples of its adaptation, and it should be seen by all printers who aspire to execute original work.

TENDERS WANTED—For general printing for alternative periods of five or seven years for the Camberwell Borough Council; forms of tender, schedules, etc., may be obtained from the Printing Office, Town Hall, Peckham-road, S.E. For the supply of paper, stationery, etc., for the East Indian Railway Co.; particulars at the Company's Offices, Nicholas-lane, London, E.C. Tenders will be received by the Postmaster-General until noon on January 5th, for the supplying, fixing in telephone silence cabinets, and maintaining free of charge, during a period not exceeding three years, writing pads exhibiting advertisements to be approved by the Postmaster-General; forms of tender from Mr. G. Morgan, Stores Department, General Post Office, 17-19, Bedford-street, W.C. For the supply of printed books and forms required during three years for the Hampton Urban District Council; particulars from Mr. E. Cozens, Public Offices, Hampton.

THE *Journal of Commerce* (Montreal) with which has been incorporated the *Shareholder*, is now one of the finest publications that Canada possesses. The combination is edited by Mr. J. C. Ross, M.A., a clever journalist, and the publishers are the Industrial and Educational Press, Ltd., Read Building, Montreal, a firm that is notable for progressive ideas in printing and journalism and one of the most flourishing concerns in the Dominion. The *Journal of Commerce and Shareholder* is beautifully printed, and covers a wide range of subjects of interest to business and professional men, the text being nicely classified and shown up in 8 and 10-point type. Of course the success of a journal depends on the way "copy" is handled editorially, combined with a good make-up and decent sized type. and it is these features that have gained a reputation for the *Jonrnal of Commerce and Shareholder* and the energetic firm behind it. Condensation is an art in itself, and in this respect Mr. Ross is not lacking, due attention being given to all salient points which none other than a capable and successful editor could deal with. Englishmen interested in Canadian commerce and finances should do well by a persual of this successful publication.

The Future of the P. M. and O. A.

SIR,—I am satisfied that my proposals for future government of the P. M. and O. A. have the support of those members of our provincial centres who take any interest in the Association's welfare. What I am waiting to hear is, what have the Parent Association's members to say about the suggestions? I do hope that before the revised rules are adopted London will speak out. It is a members' question, one on which the members should not necessarily look for a lead to the officials, who, being a changing body every year, do not *at one time* comprise *all* the Association's best men!

Members should not be alarmed by the largeness of the representation on the National Council suggested by the Manchester and North Midlands Centres. I should think the proposal was framed much in the same hope as that of a well-known trade union, which recently gladly accepted one-half that they had asked for!

I am for a National Council numerically small, but proportionately representative, freely elected by the members of each Centre, and dead against an official position in any Centre carrying the right to a seat on the National Council. Whether a Centre's representation is one or more, let us have free choice.

If London will agree to consider the question, now is the most opportune time. The revised rules, at present before the Association for consideration, can very easily be adapted for slightly changed conditions of government.

Yours, etc.,
THOS. SHAW.

Manchester,
November 24th, 1913.

The Late Mr. W. W. Fox.

SIR,—The news of the death of Mr. W. W. Fox came to me as a great shock, for I had not heard of the events which led up to it. Now I understand the shaken and all but unreadable caligraphy of a letter which I received from him in the spring of this year.

For nearly 20 years Mr. Fox was in the forefront of printer's craftsmen and reformers. How much more service he had in him, but was prevented from rendering by his unfortunate deafness, we can only surmise. When we started the Manchester Centre of the P. M. and O. A. about nine years ago he readily came down and gave us one of his characteristic practical lectures, which was followed by a (to us) profitable discussion.

Turning to me, in the chair, he said: "It is nearly all a blank to me. How I wish I could hear!"

The writer of "Quads" in your last issue has not said one word too good of our late friend. It was a pleasure also to read on another page Mr. Waterlow's testimony to Mr. Fox's worth and service.

It may be that the letter I received was Mr. Fox's last one to a fellow craftsman. As it ended with a greeting to the Manchester Centre, not yet conveyed, will you insert it? After a kind personal reference, he wrote: "I have not lost my interest in the dear old trade. I believe I was born to be a printer. I have given some blows in her defence, but I do not think I have any enemies. If they choose to be enemies, they are fools for their pains. . . . I have not forgotten your (the Manchester Centre) kindness when I spent a few pleasant hours in your company. Give my best wishes to the boys" (the Manchester members).

It is with the feeling that we have lost one of the best of our "boys" that I add my humble tribute to his memory.

Yours, etc.,
THOS. SHAW.

Manchester, Nov. 24th, 1913.

THE Scottish Bookbinders' Strike.

At the end of last week a well-attended meeting of the Glasgow master bookbinders was held. Mr. J. Monte Wilson presided. Mr. J. S. Waterston, president of the Edinburgh Master Bookbinders, was present, and reported on the position in Edinburgh. The Scottish District Council of the National Union of Bookbinders and Machine Rulers, in whose control the conduct of the dispute has been placed by the men, also met in Glasgow. Mr. Alexander Dempster presided, and delegates were present from the different branches of the Union in Scotland. At the commencement of the meeting, which lasted over five hours, reports were submitted affirming that the private agreements which had been made with certain employers were confined wholly to those firms whose conditions of employment are entirely in keeping with those demanded in the memorial of the men, and in each case a declaration had been made by the firm on their official notepaper guaranteeing the continuance of these conditions. The meeting decided to homologate the terms of the letter, repeating the request for a conference, which was sent on November 17th to the secretary of the Scottish Alliance of Masters in the Printing and Kindred Trades by the secretary of the Printing and Kindred Trades Federation, and also to accept the suggestion

Digitized by Google

of a conference to review the whole question in dispute. On Friday, the Executive Board of the Scottish Alliance of Masters in the Printing and Kindred Trades met in Glasgow. The letter from Mr. A. E. Holmes, secretary of the Printing and Kindred Trades Federation of the United Kingdom, suggesting a conference was considered, and it was decided to send a reply to Mr. Holmes agreeing conditionally to a conference for the discussion of the present position. Mr. J. Kelly, general secretary of the National Union of Bookbinders and Machine Rulers, and Mr. A. E. Holmes were present.

The masters' reply to the request for a conference was as follows:—"My board notes that the National Union of Bookbinders, including their Scottish District Council, unite with your Federation in asking for a conference. My board will be prepared to meet your representatives to discuss the present situation, but, as they have already informed you, they cannot rediscuss the memorial of April 28th, 1913, which has already been amply and repeatedly considered."

The next move must come from the Printing and Kindred Trades' Federation of the United Kingdom, who have been asked by the Masters' Alliance to fix a suitable date for the conference which they requested. The secretary of the Aberdeen Branch of the National Union of Bookbinders and Paper Rulers has received a communication from the Board of Trade, asking him to supply information as to the employment of girls at guillotine machines in the bookbinding trade in Aberdeen and also as to their wages. A bookbinder states that female guillotine operators are paid an average wage of 6s. per week in Aberdeen.

The managing director of Messrs. W. and R. Chambers, Edinburgh, writes:—"To-day our bookbinding department is worked exactly under the same conditions as existed long before there was any thought of a strike. The Union has sanctioned our men remaining in because they have no complaints to make against us; and have no reason to anticipate any."

The London Dispute.

There is little to report in connection with the strike at Messrs. Burn's. The City factory in Kirby-street, Hatton-garden, is still picketed by the men, while groups of the girl workers are daily seen discussing the situation, and a considerable number of police are stfll in evidence.

A meeting was held last week under the auspices of the National Union of Bookbinders and Machine Rulers, at the Club Union Hall, Clerkenwell-road. Mr. G. Harraway presided, and made presentations to Miss May Hampden and Mrs. Mary Friend, who were tried at the Old Bailey for alleged intimidation during the dispute. A letter was read from Mr. George Lansbury, wishing the strikers success, and speeches were delivered by Mr. F. Knee, Mr. A. McLeod, and others.

Printers' Managers and Overseers ASSOCIATION.

LIVERPOOL AND DISTRICT CENTRE.

The November meeting of the above Centre was held at the Hanover Hotel, Liverpool, the President, Mr. Harry Firth, presiding over the business meeting. Mr. J. Sutton Jones was elected to membership. The Hon. Secretary, Mr. J. N. Poole, reported on the Conference of the P.M. and O.A. with the Typographical Society and the Lithographic Society at Manchester, on October 11th, paying a tribute to Mr. E. C. Moyce, the General Secretary, for the manner in which he conducted the case of the P. M. and O. A. This concluded the business meeting

After a short interval, the first bohemian concert of the session was held, the Vice-President, Mr. G. Watson, presiding over an assembly of close on 200 ladies and gentlemen, a tribute to the popularity of the President, whose Concert Party supplied the entertainment.

The following is a copy of the programme:—

Pianoforte Solo	Alice, where art Thou?	Miss Elsie Roberts.
Song	Sea Life	Mr. Herbert Jones.
Song	Little Grey House in the West	Miss Myfanwy Jones.
Recitation	The Old Maid	Miss May Williams.
'Celle Solo	Passe-Pied	Mr. Chas. Leeming.
Song	The Toreador	Miss A. Thomas.
Humorous Song	Alice	Mr. Leslie.
Recitation	The Bald-headed Man	Miss Megan Matthews.

Interval of Five Minutes.

'Cello Solo	Lost Chord	Mr. C. Leeming.
Song	My Dear Soul	Miss M. Jones
Humorous Selection	The Talkative Two	Messrs. Leslie and Osborne.
Song	Betty's Way	Mr. H. Jones.
Recitation	The Obstructive Hat	Miss M. Matthews.
Song	Absent	Miss A. Thomas.
Recitation	My First Recital	Miss M. Williams.

At the Piano—Miss Elsie Roberts, L.R.A.M.
Musical Direction—Mr. Harry Firth.

Miss A. Thomas, who has a good voice and charming expression, sang in response to the demand for an encore, "Farewell." Miss Myfanwy Jones' sweet mellow voice was heard to pleasing effect in her two songs, and gave as an encore "Two Eyes of Grey." The contributions of Miss May Williams and Miss Megan Matthews, elocutionists, were very popular, and both these ladies were recalled on each appearance. Mr. Herbert Jones, who is the happy possessor of a fine baritone voice, gave splendid renderings of "Sea Life" and "Betty's Way," with "Young Tom o' Devon" as an encore. The skilfully played 'cello solos of Mr. C. Leeming met with deserved appreciation, and in response to a request he played "The Rosary." Messrs. Leslie Brothers greatly added to the evening's enjoyment with their songs and patter. Miss Elsie Roberts, L.R.A.M., was the accompanist, and right well did she carry out her duties.

Mr. Wm. Stephenson, in proposing a vote of thanks to the artistes, complimented the President on gathering together such an array of talent, and also on the splendid manner in which he had acted as musical director. He felt sure the large audience present testified not only to the popularity of Mr. Firth, but also to his ability to provide an evening's enjoyment of good music.

These remarks were supplemented by Mr. Wm. Stewart, who seconded in a humorous little speech, and by Mr. H. Edwards, who supported.

Mr. Firth, in reply, said he felt gratified at the remarks expressed, and pleaded that personally he was the mere figure-head of the concert; it was Miss Thomas who had got all the artistes together, and to her the praise was due. However, the evening had been a very pleasant one to him, and he felt sure the artistes had enjoyed themselves too, and he must also express his thanks to the Vice-President, Mr. Watson, for so ably filling the chair.

The singing of "Auld Lang Syne" and "God Save the King" brought a very enjoyable evening to a close.

At the December meeting Mr. C. W. Russell will lecture on "Scientific Management! Would it benefit the Printing Trade?"

Building up a Printing Job.

TOO LITTLE attention is often paid to the finish and general style of a job of printing, both by the customer and the printer who executes it. The customer is looking for the cheapest work, and the printer, having quoted him the lowest price, uses all his energies to get it rushed out with the least labour possible, with the result that it is creditable neither to purchaser or seller. If buyers of printing would pay more attention to the style and appearance of their printed matter and less to cutting printers' prices, their printed matter might be of immeasurably better quality, and so appeal more directly to the final customer whom it is intended to attract. An American printer, Mr. Frank Hubbell, the head of a large establishment in Cleveland, Ohio, has been talking on this subject, and gives his opinions thus:—"Building a printing job is like erecting a house. The ideas constitute the general formation, and may be compared to the architect's plans, The space occupied by the copy is the ground upon which the building is to stand. The type, cuts and borders stand for the separate pieces of brick, stone, lumber, glass and other materials. The type in which a printing job is displayed is as much a part of the message the advertisement carries as are the thoughts contained in it. The type appeals to the eye, and is responsible for the first impression made on the type. If this impression is good, the matter is more likely to be read and a favourable result obtained. If the first impression is not favourable, the reading of the advertisement, if done at all, will be unsympathetic. There will be a rebellion of the mind against the thoughts expressed. This is true of all printing, such as booklets, pamphlets, catalogues, mailing cards, house organs, and all matter that is set in type. Seventy-five per cent. of the printing could be greatly improved if the proper display was used. Proper type means the proper filling of valuable space. Type is talk. It represents thought. The study of printing means a careful study of type, its sizes, styles, names and uses. When to use light face, when to use heavy face, when to use a condensed or extended type, when to use italics—these are important questions which the printer has to decide. A careful consideration of these points gives printing distinctiveness. It means a stronger appeal than common typesetting. A proper use of type gives a distinction and character to your printing." These remarks are worth consideration by all who use or provide printed matter. Appearance should be put before price, and it should always be remembered that the best is the cheapest in the long run.

Employers' Defence Union.

THE Employers' Defence Union, which will have a guarantee fund of £50,000,000 sterling, is gradually coming into existence. Last Saturday the prospectus was issued and the objects of the Union are fully set out in it. These include the preservation of employers rights to engage whom they like as employees—in other words the right to employ free workers—and the right to carry on their business free from mischievous interferences. Practically speaking the Union is formed to counteract, or prevent, unrest in the industrial world or in transport circles. So far substantial sums have been guaranteed and all calls on the fund will be made on the whole of the members *pro rata* according to the amount each guarantees, and calls in any one year will not exceed 7½ per cent. on the amount guaranteed. Now there is no earthly reason why employers should not be banded together the same as trade unionists. Employers are, therefore, only safeguarding their own interests by establishing a union, and we venture to suggest that if medical men, lawyers, journalists and various trades can have their defence funds there is no excuse to prevent employers combining and forming theirs. Some people think that this union will irritate the trade unions; but as a matter of fact trade union leaders like to deal with an employers' federation in time of unrest, and they like the conferences to be of the round table nature where, as they say in Lancashire, "steam can be blown off" on both sides. We have only to look at what the masters' federation and other similar bodies have done in the recent cotton trade crisis. They were to a large extent responsible for averting a very serious strike—a strike in which individual negotiations would have been out of the question. The bitter experience of the last big coal strike, and then the railway men's, has wakened up employers, and it remains to be seen now how the new defence union will tackle matters when things are got into working order. There is no doubt it will be a fighting organisation, as the prospectus says: "It will protect the right to work of free workers against tyranny and coercion on the part of trade unionists. It will also endeavour to protect the public against the inconvenience and loss caused by strikes without due notice or without reasonable cause on the part of railway or tramway men, dock workers, miners, postal employees, or others. It is intended to promote the peaceful carrying on of business with due consideration for all."

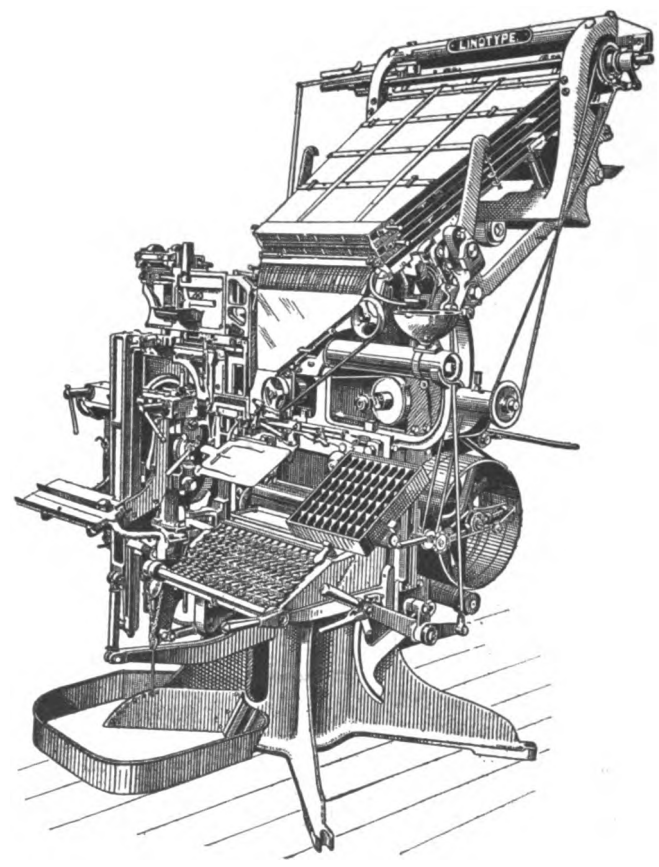
FIFTEENTH CENTURY BOOKS, A GUIDE TO THEIR IDENTIFICATION, by R. A. Peddie. 89 pp., 7½ by 5, cloth. London. Grafton and Co. 5s. net.



As Mr. Peddie says, the collection of incunabula is almost impossible for any one but the millionaire, but nevertheless the study of the work of the printers who flourished during the first half century of typography is rendered easy, owing to the very numerous collections of fifteenth century books which exist in public libraries.

But although easy so far as the accessibility of the books themselves is concerned, this branch of study, fascinating as it is to many, abounds in pitfalls for the uninitiated, due to the frequent disregard of such matters as dates, printers' names, places of production, and the like, in the imprints of those books, and the quite common absence of an imprint of any kind, save, perhaps, some such pious but uninforming phrase as "Laus Deo." The literature of incunabula is already a considerable one, but it has long been felt that some plain and simple guide to its use was desirable, and such a one Mr. Peddie, the well-known keeper of the Typographical Library at the St. Bride Foundation Institute, has provided in the work under notice. The text of the first portion of the book is arranged in twenty-two numbered sections, each dealing with some point of interest in connection with the study of the early phases of Printing, such as Types, Hebrew Printing, Music Printing, Woodcuts and Engravings; Block Books, Single Prints, Book Illustration, Initials, Printers' Marks, Title Pages, Signatures, Watermarks, etc. Under the heading of every section is a list of the books that deal with that particular branch of the subject, together with brief explanatory notes. Then follow three Appendices, viz.: (A.) an index of the Latin names of towns in which printing was in operation some time in the fifteenth century, together with their vernacular equivalents, the whole forming an interesting little etymological exercise; (B.) a list of catalogues of collections of fifteenth century books, arranged in alphabetical order by places; and (C.) a list of books on the History of Printing in the fifteenth century in particular countries and towns, including typographical gazetteers like Cotton's. Armed with Mr. Peddie's useful little book, even the most ignorant student, collector or librarian can hardly fail to find a means of identifying any fifteenth century book in which he is interested, or that is in his possession or custody. Incidentally, the work illustrates to how great an extent German, now so largely the language of scientific investigation, has superseded Latin as the "universal tongue" of bibliographers.

THE *Royal Magazine* for December has an appropriate design on the cover of a couple kissing under the mistletoe, and the contents generally are of a Christmassy character. Readable articles, interesting fiction, and good pictures go to make up an excellent number.

Financial.

Offices of the *British and Colonial Printer and Stationer*,
58, SHOE LANE, LONDON, E.C.
WEDNESDAY, Nov. 26th, 1913.

LAST Thursday there was heavy borrowing at the Bank of England, and a strong demand for credit has been maintained since. Though sufficient funds were available yesterday, rates were firm. The discount market is a shade easier. A considerable amount of gold has been bought this week, the result to date being a net influx of £226,000. There has been little doing in stock markets this week, but the tone has been satisfactory on the whole, They presented a cheerful appearance at the close yesterday. Consols have steadily improved, and are firm, the quotations being 73⅛ to 73¼ for money, and 73 1/16 to 73 5/16 for the account.

The miscellaneous industrial market is uncertain, and business has been restricted, though it showed signs of broadening yesterday. In the section relating to paper and print rises have occurred in Linotype and Machinery A Deb. of 2 and 3, and in the B Deb. of 1; in Waterlow and Sons Def. of 3 and 1; and in International Linotype of 1. Falls have taken place in *Lady's Pictorial* Pref. of ¼. Business has been done during the past seven days in Amalgamated Press Pref. at 20s. 3d.; in Cassell and Co. at 97s. 6d., 98s. 9d., 98s. 9d., and 100s.; in Sir Joseph Causton and Sons Pref. at 92s. 6d.; in *Financial News* Pref. at 15s. 3d.; in Ilford Pref at 18s. 9d.; in *Illustrated London News* and *Sketch* Ord. at 3s. 3d., in the Pref. at 13s., 13s. 3d., 13s., and 13s. 6d., and in the Deb. at 62⅛ and 62½; in International Linotype at 75 and 72½; in *Lady's Pictorial* and *Sporting and Dramatic* Publishing Pref. at 50s. and 51s. 3d.; in Linotype and Machinery A Deb. at 54 and 57, and in the B Deb. at 40; in Edward Lloyd Pref. at 21s. 6d.; in George Newnes Pref. at 17s. 3d. and 17s.; in C. Arthur Pearson Pref. at 80s. 7½d.; in Spicer Bros. Pref. at 9 3/16 and 9; in Raphael Tuck and Sons Ord. at 17s. 6d., 17s. 9d., and 17s. 6d.; in Waterlow Bros. and Layton Ord. at 6⅛, and in the Pref. at 7 and 7⅛; in Weldons Ord. at 30s., and acc. 31s. 10⅛d., and in the Pref. at 20s. and 20s. 9d.; and in Wyman and Sons Pref. at acc. 15s.

DIVIDENDS AND REPORTS.

LINOTYPE AND MACHINERY, LTD.—The report states that, after providing for depreciation, interest charges, etc., the accounts for the year to June 30th show a profit of £70,140, increasing the credit balance to £163,087, which the directors propose to carry forward. Last January six per cent., in the form of B debentures, was paid on the preference shares, and a year before that 10 per cent. was paid on them, in the form of A debentures.

"THE GENTLEWOMAN."—Dividend of 5 per cent. on the ordinary shares for the year ended July. £1,000 to the reserve fund (making £15,000), and £731 carried forward.

NEW COMPANIES.

M. SURKART, LTD.—Registered on November 19th, with a capital of £500, in £1 shares, to carry on the business of chemists, general and advertising agents and newspaper proprietors, etc. The subscribers are M. Massaquant and A. Massaquant. Private company. The number of directors is not to be less than two nor more than four; the first are M. Massaquant and A. Massaquant. Qualification, £50. Registered office: 31 and 33, High Holborn, W.C.

INTERNATIONAL ART AND PUBLISHING CO., LTD.—Registered on November 14th, with a capital of £100, in £1 shares, to carry on the business of proprietors and publishers of books, magazines, journals and newspapers, printers, booksellers, stationers, advertising contractors, etc. The subscribers are R. W. Dodd, B. W. Johnson and A. W. Crosse. Private company. Table "A" mainly applies.

ASH RUBBER STAMP CO., LTD.—Registered on November 12th, with a capital of £1,000, in £1 shares, to carry on the business of india rubber stamp manufacturers, printers, lithographers, engravers, etc., and to adopt an agreement with H. S. Ash. The subscribers are H. S. Ash and T. G. St. Johnston. Private company. The number of directors is not to be less than two nor more than five; the first are H. S. Ash and T. G. St. Johnston and their nominee. Qualification, £100. Registered office: 19, Constitution-hill, Birmingham.

AUTHORS' SYNDICATE, LTD.—Registered on November 7th, with a capital of £10,000, in £1 shares, to carry on the business of literary agents, to act as advisers and agents for the valuation, sale, purchase, registration and management of literary and dramatic copyright property in England, Europe, U.S.A., Canada and elsewhere, to enter into a contract with W. M. Colles for the acquisition of the business of a literary agent carried on by him at 3-7, Southampton-street, W.C. The subscribers are J. W. Gilmer, and W. M. Colles. Private company. The number of directors is not to be less than two nor more than seven; the first are J. W. Gilmer, and W. M. Colles (permanent managing director). Qualification 100 shares. Registered office, 3-7, Southampton-street, Strand, W.C.

FRANK HOWARD, LTD. — Registered on November 7th, with a capital of £10,000, in £1 shares, to carry on the business of music publishers, music and musical instrument dealers, etc. The subscribers are W. Allen, and W. Grierson. Private company. The number of directors is not to be less than two nor more than six; the first are Sir Frank Newnes, Bart., W. Grierson, H. S. J. Booth, and W. Allen.

FARLEY AND CO., LTD.—Registered on November 12th, with a capital of £1,000, in £1 shares, to take over the business of a process engraver carried on by J. C. Farley, at Mount-street, Nottingham, as "Farley and Co." The subscribers are J. C. Farley, A. Streets, and H. Scott. Private company. The number of directors is not to be less than two nor more than three; J. C. Farley is the permanent managing director.

LONDON AND PROVINCIAL WALL-PAPER CO., LTD.—Registered on November 11th, with a capital of £1,000, in £1 shares, to carry on the business of wall-paper, oil, colour and varnish manufacturers and dealers, decorators' sundrymen, etc. The subscribers are W. J. W. Sheret, F. G. Love, and R. E. Love. Private company. The number of directors is not to be less than two nor more than three; the first are W. J. W. Sheret (managing director), F. G. Love, and R. E. Love (all permanent, subject to holding 100 shares each. Qualification £100. Registered office, 21, Hartfield-road, Wimbledon, S.W.

S. HILL AND SON, LTD.—Registered with a capital of £1,500, in £1 shares, to take over the business of a stationer, printer, bookbinder, paper and fancy goods dealer, carried on by G. A. Hill, at Bury, Lancs., as S. Hill and Son. The subscribers are G. A. Hill, J. H. Hill, and Mrs. A. Hill. Private company. The number of directors is not to be less than three nor more than five; the first are G. A. Hill, J. H. Hill, and Mrs. A. Hill. Qualification £150. Registered office, 170, Bolton-street, Bury.

At a meeting of the company, held at London, on October 16th, the following resolution was passed; and at a subsequent meeting on November 12th, was duly confirmed:—"That the company be wound up voluntarily, and that Mr. Ernest Parke, of 21,

Digitized by Google

Bouverie-street, E.C., be appointed liquidator of the company. Notice is given, that a meeting of creditors of the Star Newspaper Co., Ltd., will be held at 21, Bouverie-street, E.C., on December 2nd.

NEW CARD CO., Ltd.

At a meeting of the company, held at London, on October 23rd, the following resolution was passed and at a subsequent meeting on November 8th, were duly confirmed, viz.:—"That the company be wound up voluntarily under the provisions of the Companies (Consolidation) Act, 1908, and that Mr. Ernest A. Harris, of 11, Cromwell-grove, W., be appointed liquidator for the purpose of the winding-up."

COMMERCIAL INTELLIGENCE.

Re JOHN OVEREND, Printer and Stationer.

This debtor, whose liabilities were £235, and deficiency £196, appeared for examination at the Bradford Bankruptcy Court on the 19th inst. The debtor said he commenced business as a printer and stationer in Cookelane, Keighley, in December, 1885. He had never prepared a balance-sheet and never kept proper books. His net profit in Cookelane was £1 a week, but he took to gambling in stocks and shares and "differences," losing about £1,000 up to the time he removed to Cavendish-street. That was after six months in temporary premises in 1898. He lost £2 or £3 a week during the time he was in temporary premises, his business being crippled. In 1907 he removed to his present premises. He had lost a considerable sum of money on the purchase of land at Wibsey. The Registrar remarked that the new law would be more strict with regard to the keeping of proper books.

Re CHRISTOPHER WALKER, Printer and Stationer.

At the Blackpool Bankruptcy Court this debtor, carrying on business as a printer and stationer, at 46, Elizabeth-street, Blackpool, came up for examination. The liabilities expected to rank amount to £159 3s. 8d., with assets £16 12s. 4d., leaving a deficiency of £142 11s. 4d. In answer to Mr. Plant, the debtor stated that prior to commencing business on his own account, in January, 1908, he was a foreman printer, and his wages were about £2 5s. a week. When he commenced business he had about £20, which he had saved, and he bought a small hand machine. The business paid him for the first three years, but afterwards began to go down. Material increased in price, and he could get no more for his work. He began to go to moneylenders, which made his position worse than before. He first commenced to borrow about twelve months ago, and had continued to borrow from one moneylender to pay another. When he borrowed money in June, 1913, he was not aware he would not be able to continue the business. Debtor further said he had not worked all summer owing to blood poisoning, and his wife was an invalid. The examination was adjourned until next month.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

DISTRIBUTION OF ASSETS.

LIPSETT, H. C., late of Kingsclere, Wickford, Essex, journalist. Claims by February 3rd, to Vandercom and Co., 23, Bush-lane, London, E.C., solicitors for the administrator and executrix.

ROWLEY, J., late of 18A, Watling-street, London, E.C., printer and stationer. Claims by December 18th, to Bolton, Jobson and Yate-Lee, 2, Temple-gardens, Temple, London, E.C., solicitors for the executors.

THE BANKRUPTCY ACTS, 1883 AND 1890. NOTICES OF INTENDED DIVIDENDS.

ACKLAND, T. J., trading as T. J. Acland, 32, North-street, Bridgwater, Somerset, stationer, bookbinder, etc Claims by December 6th, to C. H. King, official receiver, 26, Baldwin-street, Bristol.

SEATH, H., 110, Park-street, Luton, publisher. Claims by December 11th, to A. Ewen, official receiver, The Parade, Northampton.

NOTICE OF DIVIDEND.

BLOMFIELD, A. T., 74, Carr-house-road, Doncaster, newsagent and stationer. First and final dividend of 2s. 8d., November 26th, at the official receiver's office, 14, Figtree-lane, Sheffield.

NOTICES OF RELEASE OF TRUSTEES.

CLARKE, A. F., 77, Vinery-road, Mill-road, Cambridge, lately trading at 41, Green-street, Cambridge, stationer. Trustee, H. W. Cox, official receiver, 5, Petty Cury, Cambridge. Released October 27th.

EDWARDS, C. F., 11, Cumbergate, Peterborough, printer and stationer. Trustee, H. W Cox, official receiver, 5, Petty Cury, Cambridge. Released October 27th.

GIBSON, R. J., 68, Clarence-gate-gardens, London, N.W., advertising contractor. Trustee, W. P. Bowyer, official receiver, Bankruptcy-buildings, Carey-street, W.C. Released November 3rd.

HOLT-WHITE, W. E. B., formerly St. James-road, Sevenoaks, Kent, now 13, Champion-grove, Denmark-hill, London, S.E., journalist and author. Trustee, W. P. Bowyer, official receiver, Bankruptcy-buildings, Carey-street, W.C. Released November 3rd.

RASMUSSEN, J., 3, Southwark-bridge-buildings, Southwark-bridge, London, S.E., printer Trustee, A. Willmott, C.A., 14, Old Jewry-chambers, E.C. Released November 18th.

THE COMPANIES ACTS, 1890 AND 1908.

NOTICE OF APPOINTMENT OF LIQUIDATOR.

C. J. FORWARD AND SON, LTD., 27, Sayer-street, New Kent-road, London, S.E. Liquidator, H. Wingfield (with a Committee of Inspection), 67-9, Watling-street, E.C. Appointed November 4th.

Linotype and Machinery, Ltd.

The Annual Meeting.

The annual general meeting of Linotype and Machinery, Ltd., was held on Monday at the offices, 188, Fleet-street, E.C. Sir Joseph Lawrence presided, and in the course of his address said that their net available profits, although £3,000 in excess of last year's, would have been larger still but for the fact that they had to bear their share of the liabilities under the Insurance Act. They also had an increase of debenture interest in respect of the issue of debentures last year, which they gave the shareholders. At present there was a large amount owing to the company by customers due to the increased trade. They had increased their stock, and altogether they were £70,000 in cash results better off than they were last year. The business was going on soundly. New markets were being opened, and new developments taking place, which they hoped would be sources of increasing revenue.

Mr. Greenhall said it was disappointing that, after making a larger profit than last year, they did not propose to pay any dividend. Compared with a few years ago their debenture debt and loans were higher, and the cash at the bank considerably less. While the company had made profits for the past five years, none of it had come to the shareholders. No doubt the money had gone into the business, but for whose benefit.

The Chairman, in reply, stated that since the business began they had paid more than the whole of the cash capital they had received from the shareholders in dividends. The total amount of cash put into the concern was £1,513,000, and the actual sum paid in dividends was £1,679,000. They had only paid the dividends in debentures because they needed the cash for capital purposes.

Another shareholder said he did not exchange his shares for those of the International Linotype Co. or of the Mergenthaler Co., because if they were good enough for the Americans to buy, they were good enough for him to keep.

The Chairman, in reply, said the American company was not going to get from this company a farthing more benefit than any other shareholder. If the company earned a dividend they would receive the due amount on their shares; if it did not pay they would suffer just the same as anybody else.

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help a-d an ornament thereunto."
FRANCIS BACON, Baron Verulam.

Apropos, just as I am thinking of Mr. Fox and his time—his long and strenuous time—the post brings me a letter suggesting how much work is still to be done in costing reform.

o o o

J. A. N. writes me:—

o o o

City, Nov. 11th, 1913.

MY DEAR QUADS,—

Sane competition in prices *may* be the life blood of trade, but the experience of the past few years' trading has convinced many printers that there is a large amount of absurd and reckless "estimating" abroad. It cannot all be put down to ignorance of costs, especially after the admirable and energetic manner in which the Master Printers' Association has lately devoted itself to our education on the question of "What is Cost."

No good purpose can be served by reticence at the present moment, and I am sure that the worthier part of the master printers' body will agree that much of the cut-throat "estimating" is prompted by greediness and dishonesty. It ought to be recognised that printers who designedly quote for work at a lower price than the actual wages outlay are trading dishonestly. And I have come across many such quotations, chiefly in work consisting almost entirely of composition.

My charge is deliberately made and there is no question here of the point of view; "*less than the actual wages paid*" is surely plain enough; and the offenders are firms generally in a large way of business. It is all very well to say that such trading, if persisted in, is the straight road to the Bankruptcy Court; but that is small comfort to the honest printer who tries to pay his way.

o o o

How can printers save their trade from the unscrupulous attacks of the dishonest trader? The employees have their Unions; why should not the employers also have their Trade Union? "Any act done in pursuance of a trade dispute" . . . . you know the rest! To my mind, a very objectionable "legality," and I am sure the bulk of the trade is of that opinion.

I do, however, sincerely hope that some means may be suggested of dealing with this canker at the heart of the trade. Might it be suggested that any printer who becomes cognizant of any instance of dishonest trading, where the amount involved is anyway considerable, should in strict confidence give the "chapter and verse" to a special committee of the Association, who would consider the statement as practical men and take such action by way of remonstrance that might seem just. If repeated complaints were found to be justified, some more drastic action would follow in the interests of the whole trade.

I have written as above in the hope that you may be disposed to voice the feeling of the trade upon this matter. It is pitiable to have to fight against "ignorance," but *you* must fight downright dishonesty with the pen-sword of the doughty warrior. And who can do this better than Quads"?

o o o

If a man is selling work for less than cost while he is not thoroughly and amply solvent, he is clearly dishonest.

o o o

If he does this when he has a comfortable margin of assets, he is not dishonest; he is either very wily or very stupid; and possibly he may be both.

o o o

Monopolists, or would-be monopolists, are reputed to be often ready to sell under price in order to freeze out a competitor. It is "greedy," as "J.A.N." would say; it is mean, and oppressive as any act of a tyrant. Dishonest is perhaps not quite the term, since there is in dishonesty an implication of broken faith. And you can't dishonestly break an agreement you've never entered into.

o o o

I agree with "J.A.N." that the worst offenders are at times men in a large way of business. I have an extraordinary instance in my mind at the moment.

o o o

"J.A.N." asks: "Why should not employers have their trade union?" Well, many business men have; lawyers and doctors for conspicuous examples; though to be sure they are not employers in the ordinary sense. They might not like even to be called business man. But they are in business just like the rest of us.

o o o

The foundry proprietors of London three years ago formed themselves into a specific trade union. It was much easier for them to do that than it would be for master printers. That, however, is not to say that such a master printers' trade union could not be formed.

o o o

"J. A. N." makes a fairly specific suggestion at any rate fairly specific up to the "remonstrance" point. Even "remonstrances" are commonly disliked. "The applause, sir, of a single individual is of great consequence," said old Johnson in one of his most candid moments. The applause of many is of more consequence. and conversely the remonstrance of many cannot be ignored; whatever affectation of ignoring it one may make.

o o o

The "more drastic action" might take the line of influence brought to bear upon the houses supplying such an undercuttlng printer with type, ink, presses, or paper.

o o o

I must leave the subject for this week; in hope of cutting in at it again.

o o o

The *Evening News* and the *Star* have been very entertaining of late. The *News* reached its 10,000th issue, on Friahy, November 19th.

o o o

As I write I am passing the "Pindar of Wakefield," a licensed house in the Grays-inn-road. I see on its facia "Established 1517; rebuilt 1878." What on earth will the *Evening News* do when it can celebrate its quar-centenary as "The Pindar of Wakefield" will be able to do in four years time.

o o o

It will no doubt manage better than it has done now. It wont give away silver rattles to all babies born in its "great day"—one of the *News's* little oddities. Its methods will be less babyish altogether.

o o o

I went into so many little arrangements for showering presents upon us (presumably in conjuntion with advertisers) that it became the current gossip that if only there'd been a bit of news in its issues during its joy week, there'd have been a bit of everything.

o o o

Of course that chip exaggerated, we all exaggerate on joy days; all the same the *Star* was quite happy in its poster of the week, "We Sell News."

o o o

One of the cleverest parodies I ever read appeared in the *Star* on Saturday; *apropos* of its own 8,000th issue, which was presented on that day.

o o o

Do get it; send for it. Its a thing to pass on from friend to friend.

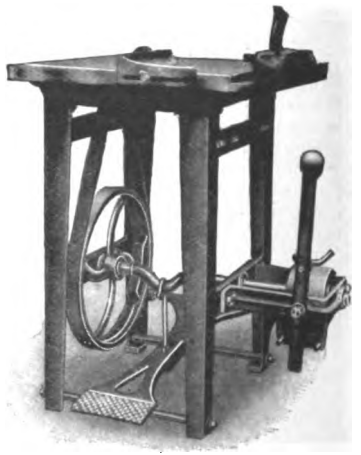
o o o

Its parting shot is *apropos* of the Frank Brangwyns impressionist picture which was to occupy two pages in the *Evening News* It was a splendid thing undoubtedly as a solid deep black and white impressionist study. It didn't look well in grey, and the *News* announced in later issues that it had been cut down by one half, and that the rotary process did not permit of justice being done to the artist.

o o o

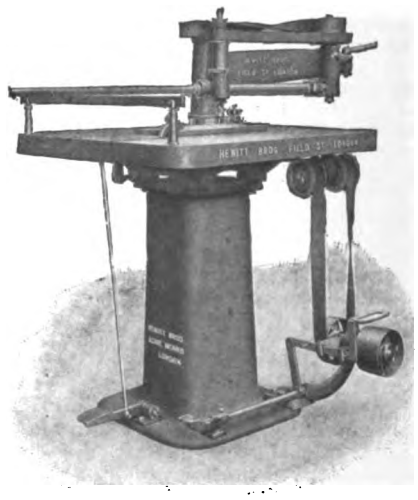
So the *Star* announced that it had had a Brangwyn picture, but had had to cut it down; "it was using too much ink."

o o o



I should perhaps make plain that the *Star* made no other attempt to mark its 8,000th number than by way of this delightful parody.

FRANK COLEBROOK.



THE revenue derived from Austrian official newspapers, according to 1912 report of the British Consul, which has reached us, was £407—the gross revenue being £155,912, and the expenditure £115,505.

THE commercial value of good taste, to buyers of printing, is marked by the rising demand for advertising managers, keen in their sense of appropriateness and expert in their knowledge of the harmonies of subject-matter with paper, type, form and colour.

¶ Of two catalogues, the same in purpose, but differing in quality, the one built on the laws of good taste will win by a margin big and decisive. Tests have proved this—and the truth of it is spreading.

¶ With this recognition has come an insistent call for men of good taste, and with the vision of its possibilities, who can plan, lay out, and put through the printing campaigns of high-grade houses.

¶ To such houses and to such men *The Graphic Arts* comes as a magazine full of suggestions, and educational features that stimulate good taste in all the factors that make for good printing.

¶ Send 30 cents for a sample copy.

Foreign and British Paper.

Our Foreign Trade.

THERE was an increase in the imports of paper, and a decrease in exports last month. The total values for October and also for the ten months ended October are as under, with increases or decreases compared with the corresponding periods of last year :—

OCTOBER.

Imports	£720,121 +	£54,260
Exports	300,802 —	35.474
Re-Exports ...	24,260 +	4,504

JANUARY-OCTOBER.

Imports ...	£6,411,728 +	£454,534
Exports	3,099,250 +	169,738
Re-Exports ...	248,359 +	100,465

Imports.

PRINTINGS or writings show an increased importation last month, the value being higher by £4,379. This was due to an improved demand for the class "not on reels," as the receipts of reel paper show a falling off. The imports under the latter heading were chiefly from Newfoundland, the value standing at £57,119, as compared with £45,304 credited to Norway and £22,865 to Sweden. It is noteworthy that Germany is sending more reel paper to this market. A prominent position in the import list is held by packings and wrappings, the value last month being £259,232, an increase of £32,546 compared with October of last year. Sweden and Germany, particularly, have considerably enlarged their shipments of packings and wrappings. Although the receipts of hangings have declined, other printed or coated papers have been in more active demand, with the result that the total value shows an increase of £2,629. Boards mark an advance of £13,795, and unenumerated £911. With the exception of decreases of £6,527 in hangings, and £8,865 in other coated or printed papers, the imports during the ten months ended October, as compared with the corresponding period of last year, show the following increases :—Printings or writings, on reels, £12,935, and not on reels, £40,615; packings and wrappings, £230,893; strawboards, £88,492; mill and wood pulp boards, £48,374; and unenumerated, £48,617.

Exports.

THE decrease in the exports last month included a drop of £28,992 in printings. There was a heavy reduction in the shipments to British Possessions, particularly Australia. The value was £82,269, a decline of £28,217 compared with October of last year. Printings of the value of £54,396 were purchased by Foreign Countries, a depreciation of £775. In writings, the demand was less active last month, British Possessions taking £30,900 worth and Foreign Countries £13,479, decreases of £1,516 and £299 respectively compared with October of last year. Packings and wrappings were in better request to the extent of £2,901; paper-hangings show a decrease of £6,276, and other printed or coated papers an increase of £1,320. The shipments of paste, mill and cardboard and manufactures thereof were well maintained, but all other articles evidence declining values. Taking the ten months' figures, it is satisfactory to find a substantial advance in the exports of printings, the increase in value amounting to £114,009. Writings, however, showed a small decline of £2,987. A satisfactory business is recorded in packings and wrappings, the value being up £44,120. Hangings also show an advance of £1,996, but other printed or coated papers evidence a reduction of £17,739. Other articles of export show a favourable expansion.

Exports of British Paper, etc.

"Until type founders make type of steel, depreciation on foundry type is a needless waste of real money."

To Those who Buy or Sell Type Composition

We advertise the advantages of "Monotype" Composition:

Because foundry type, when used, is old type, and old type is not so good as new "Monotype" type—which is new for every job.

Because the correction of matter set in foundry type involves the waste of compositors' time and of your money, changing bad letters for good letters. When "Monotype" matter goes to press it is all new type.

Because the cost of composition in foundry type does not end with the compositor, but with the pressman, who shares with the compositor the labour of changing bad letters for good letters.

Because the use of foundry type requires more make-ready on press. "Monotype" type saves make-ready because every type is new and accurate in height-to-paper.

Because the very highest grades of printed matter—catalogues, books and magazines—printed in the United Kingdom and on the Continent are "Monotype" set.

Because "Monotype" economy, versatility, and quality, are evidenced by the eminence of Monotype users.

Between "Monotype" composition and the product of "slug" machines there is no comparison.

The Monotype Machine sets type in justified lines, from 5 pt. to 18 pt., and casts type for the cases from 5 to 36 pt. A large range of faces to choose from.

Printers' Managers and Overseers ASSOCIATION.

NORTH MIDLANDS CENTRE.

"Electricity as Applied to the Printing Trade."

By MR. G. E. PHILLIPS, M.I.E.E.

The members and friends of this Centre who attended the above lecture held at the Albert Hotel, Nottingham, on Saturday, November 22nd, were for more than an hour and a half intensely interested in a practical, theoretical, and lucid explanation of the value of electricity for power, lighting, heating, telephonic communication, and many other uses applicable to the printing trade. Mr. C. G. Budden (President) occupied the chair, and, introducing the lecturer, assured those present the subject was one demanding the attention of all desiring to be in touch with the latest and most up-to-date means of scientifically illuminating their works, driving power for machinery, and methods of communication. Besides knowing Mr. Phillips personally, and having had practical experience of his many installations at the works of Messrs. Boots' Cash Chemists Printing Department, he was sure the lecturer would give them the results of his study and experience.

Mr. PHILLIPS proceeded with his lecture on

Electricity as Applied to the Printing Trade.

Probably the printing trade has made as remarkable a progress during recent years as any other industry in this country, and in certain directions I think it must be acknowledged that electricity has played a most important part in this progress, as it has entered into the lighting, heating, driving, and many other special departments of the trade, and revolutionised the methods till then obtaining, reduced the cost of manufacture, increased the output of the machines, and greatly improved the conditions of the worker.

When your President invited me to give this Society a Paper, it was with these thoughts in my mind that I accepted, and I trust that our experience may have been such that one or two points may be raised to-night which may more fully prove that electricity is the most flexible, convenient, and ready servant that the master printer has at his command, and also that its field is practically unlimited, and that the electrical engineer is only waiting to know of your problems and difficulties to at least assist in the solving and removing of these barriers to still further progress.

I would first point out that the printing trade has certainly not proved one of the easiest of "nuts to crack," as it is very generally acknowledged in the electrical world that if a piece of apparatus can be designed to withstand the strain and hard work which a machine hand can place upon it, that it is capable of "standing up" to almost anything.

In the designing and laying out of a printing works the electrical engineer should be called in as early as possible, as many of the points raised will require incorporating in the actual building itself, if the greatest efficiency and utility is to be obtained.

The efficient general lighting of the various rooms should in all probability be quickly settled, immediately it is known for what purpose the rooms will be used. To many individuals this is a matter easily and quickly settled. "Oh! one here, and another there, and I think perhaps another just there," is the common method in selecting the desired positions. Now, illumination of any area has developed to

A Very Exact Science,

and should be treated as such, if such things as eye-strain, headaches, and efficiency in both work and cost is to be considered.

Mr. G. E. Phillips, M.I.E.E.

The eye must be regarded as somewhat of an automatic camera, in which the iris is represented by the diaphragm and the retina by the sensitised plate. Now in photography, in the presence of very "high" lights, to obtain detail it is necessary to diminish the aperture of the diaphragm, and thus exclude a large portion of the light, while in the reverse case the diaphragm is opened to its very fullest extent, and as much light is absorbed as is convenient. The diaphragm of the eye, "the iris," is automatic, and opens and closes as required, very similar to that of the cat, but not to so appreciable an extent. The working of the iris is not very rapid, and does not alter half so rapidly as the source of light differs in many cases.

The reason I mention all this is to convince you of the necessity of avoiding "high" and "low" lights with the consequently automatic working of the eye diaghragm, which naturally will eventually become tired, and you then suffer from eye-strain and eventually perpetual headaches. From this I think you will readily see the necessity of even and diffused illumination throughout the room. There are three easy ways of obtaining this desired effect:—

Firstly, by placing the source of light sufficiently high to be well above the eye level, and in scientifically designed reflectors, which will reflect the light in *known intensities* over *definitely known areas*. This might be termed "direct lighting:" I will return to that later.

The second way is to enclose the lamps in a semi-transparent container, which diffuses the light evenly, and prevents "glare," due to the actual filament being in the line of vision. This is the "semi-indirect" method of lighting.

The third method is known as the "Fully-Indirect" system of illumination, and is by far the most scientific way of obtaining ideal lighting. In this system, the lamps, or other sources of illumination, are placed in entirely opaque bowls hung from the ceiling, and the light directed by means of reflectors to the ceiling, and then again from the white ceiling it is reflected evenly and absolutely without shadow throughout the area to be illuminated.

Now, naturally, the height of the room, the position of the worker's eyes, the colour of the furniture and fittings, must all be taken into consideration before deciding upon the system to be employed. All the above refers only to the general lighting, and special circumstances and special machines require special consideration and methods.

The compositors' room is probably the most difficult room to economically light with success, and many, many schemes have been brought forward to deal specially with this problem. The colour of the metal is such that it gives no assistance by reflection.

The Amalgamated Press Company's new premises, Fleetway House, are lighted by inverted arc lamps, in which the reflector is under the lamp, and all light is thrown to the ceiling.

Here the compositors spoke in high praise of the lighting, but personally I think it is not ideal, in view of the fact that the whole room is illuminated to one intensity, and the eye is inclined to wander, which is not the case when the rest of the room is kept in comparative darkness with a high concentrated light on the type.

Scientific reflectors, which almost "hood" the light, hung just above the eye-line, are successfully used in Station-street; a slide will be shown shortly illustrating this method, taken entirely by artificial light.

The press-rooms are best lighted with high candle power units, placed as high as possible, with local lights fixed under the feed-boards, etc., to assist in making ready.

It is useless to try and definitely say exactly how and why a department should be lighted, as I have already pointed out that so many conditions have to be considered and decided separately in each case.

Power.

Having roughly outlined the advantages to be obtained by scientific lighting, by electricity, we come to the "Power" question. Here, the electric "juice" makes even greater advances towards increased efficiency, output, and high-class work.

The old-fashioned method of installing a steam or gas engine, and then transmitting the power by numerous lengths of shafting, counter-shafting, pulleys and belting, has numberless undesirable features. In the first place,

Digitized by Google

the engine had to be of sufficient power to be able to run all the machines at one and the same time in case of necessity, and yet was only called upon so to do at very infrequent intervals, as nearly always some machines would be "making ready," others would be standing waiting for a suitable class of work to come along, and meanwhile the engine would be running at a load varying perhaps anywhere between half load and full load.

Now all prime movers, whether gas or steam, run more efficiently at full load than at any other. Take the following instance of a well-known make of steam engine at 100-b.h.p.:—

The makers' figures are as follows:—Full load, 91 per cent.; three-quarter load, 84 per cent.; half load, 72 per cent., and so on, so that for this instance only the engine would cost 20 per cent. more for fuel, etc., when running at half load, than when running fully loaded. With gas, these figures are even more inefficient.

We then come to the losses in transmission, and these by means of ordinary shafting, etc., may be anything from 15 per cent. to 50 per cent. These figures may appear exorbitant, but actual experience has proved than even the 50 per cent. can be exceeded in exceptional cases.

A glaring instance of where losses can occur came before my notice some five years ago, when I was called in as a consultant to a large flour mill, to advise how best to obtain a larger output with the then obtaining steam plant. The building had originally been constructed as an oil cake mill, and was built in seven floors, all supporting columns being 12-in. square oak posts and beams. The shafting was run close up to the ceiling, and the belts were taken upwards through the ceiling to the machines above. Thus the driving centres were short, and necessitated tight belts. The shafts were driven at the far end in each instance by means of ropes.

Upon indicating the engine it was found that 51 per cent. of the total output of same was required to simply turn the shafting and bend the belting, then running idle on the loose pulleys.

To shorten a long story, the shafting was re-lined, self-oiling bearings were installed, the diameter of the pulleys on the main shafts were increased, also on the machines; the driving centres increased from about 4-ft. to 12-ft., with the result that the loss was reduced from 51 per cent. to 19 per cent.

Even this last figure greatly varied, and shows how easily power can be wasted without easily anticipating same. The shafting had been re-lined when the stocks had been fairly normal, and well distributed over the floors; when the stock became abnormal the floors sagged, and up went the power losses, and when the stocks were low the same thing occurred owing to the floors rising.

This miller was able to put in extra machines, milling five sacks per hour more, and in addition, to generate all his own electric current for lighting purposes, instead of purchasing same from the Corporation. This totalled a saving of £800 per annum, without any increase in his engine power.

To revert to the printing trade. At times it is necessary to work overtime on one or two special machines, but the engine must be run as before, and all the transmission losses remain just as high as when the works were running full load. All this is immediately obviated as soon as electricity is installed in the most efficient method, namely:—

A motor connected to each machine (directly); under this arrangement only power is used by the machines in actual operation, and perfect control over the speed of the machine can be obtained without interfering with others. In the event of a breakdown only one machine is affected; the cost of working overtime is only just exactly as much as the machine requires, and what is of even more importance the operator has the machine under control to a much greater degree than is possible under any other method.

When I say a "motor to each machine," of course this refers to the presses and large plant, this method being too expensive for driving the "Croppers," sewing machines, and various small machines: these should be grouped as found most convenient, and a motor directly connected to the shafting of each group.

For Driving the Ordinary Flat-Bed.

The electric driving of an ordinary flat-bed reciprocating machine would probably be considered quite an easy matter, but I can assure you that many points require considering. I should like to take you through these one by one.

In the first place the motor itself should be very carefully selected. Some motors are what we term "shunt" wound, and run at a fairly constant speed between "no load" and "full load," but tend to drop in speed as the load increases.

A second type is the "Series" machine, which is so wound that its speed is inversely proportional to its load: for instance, a 10-h.p. Series machine might run at only 300-r.p.m. at full load, 800-r.p.m. at half-load, and would probably run so fast as to fly to pieces if allowed to run light. This type of motor is one of little use to you as printers, except for running cranes, hoists, etc, where this characteristic is very valuable.

But a third type is the "Compound" wound machine, which is a combination of the "Shunt" and "Series" machines, and can be constructed to give almost any speed characteristic required; it has the advantage of a higher starting tongue than the shunt machine, and can be "compounded" to give an absolutely constant speed throughout its fluctuating loads. This is, of course, very frequently an advantage in printing work.

Having selected the type of motor most suitable for the machine in question, it can be put down right under the press, and coupled up either by means of belts, gears, or silent running chains. Your President is an enthusiast for the chain drive, and is having the majority of his machines converted from the belt drive to this form of transmission.

The next point to be settled is the Controller, and it is here that so many fatal mistakes are made. The controller is the "brain" of the electrical side of the machine, and can easily "make or mar" the whole scheme, and must consequently be chosen with care and thought.

The perfect controller has to be capable of the following functions:—Starting the motor easily, and without demanding excessive current; the accelerating must be even, and as rapid as is consistent with the machine controlled; it must be capable of "inching" without burning the contacts; it must prevent the motor being overloaded, and shut it down if this should occur; it must be capable of preventing damage to the machine in the event of the electric supply being discontinued, and must replace the conditions for restarting whenever it is switched off; it must allow of speed regulation being carried out at will, and above all must be extremely robust and strong mechanically, and simple to operate.

The whole of the above operations must be as automatic as possible, remembering that the machine attendant is a printer, and not an electrical switchboard attendant. Now the chief difficulty of the functions just referred to is in

The "Inching."

The operator, when making ready, is continually requiring to move the cylinder an inch, or a fraction of an inch, and to do this with an ordinary starter means that he would carry the starter arm on to the first contact, and immediately the machine commences to revolve, would bring it back again to the "off" position. This would cause an "arc" to be formed on the edge of the contact, which would burn and spoil the contact in a very short time.

The only way to prevent this mischief is to so arrange things that it is impossible to actually break the circuit on the contact itself, but must break it on a special mechanism built for that purpose.

A very delightful controller for hand operation, built specially for this type of work, is manufactured by the Igranic Electric Co., of Bedford. Here the whole of the making and breaking of the main circuit takes place on a special circuit breaker, and is mechanically actuated, in so far that all the while the handle continues to be carried forward, the circuit to the breaker is still complete, but immediately the handle is brought backwards at all the circuit breaker opens the main current, the contacts are dead, and no possible burning can result.

This instrument is, of course, hand-operated, and is suitable for small machines, where the operator does not necessarily require two hands immediately the machine commences to revolve, but the fully automatic is by far the most suitable for larger machines, and is so exceedingly simple to operate, only the pushing of a button being necessary either to start or stop, and it leaves both hands of the operator free to attend to the feeding of the machine, etc., even before the machine commences to revolve.

In the fully automatic operation the circuit breaker is essential, and is so designed as to act as the main switch as well as the circuit breaker. These breakers are so made that all the wearing parts are renewable, and are provided with a magnetic blow-out, which materially reduces the sparking and burning.

A great advantage of this type is that the controller itself need be nowhere near the machine, but can be placed on the wall or in any other suitable position most out of the way, and only the pilot or controlling switch wires led to the machine itself.

All the previous remarks have had reference to flat bed machines, and the smaller and more common type of presses, but it may be of interest to augment these by reference to some of the special applications of electricity to

The Mammoth Newspaper Printing Machines,

such as are used in the production of the large London newspapers. Of course it will be generally recognised that each type and make of rotary newspaper press will have special features which will require special consideration, but the general conditions required are as follows:—

Complete control over every movement, from all the places where attendants are stationed, often as many as eight positions; all control buttons must be so inter-locked that it is impossible for the machine to be started by any one of the attendants until released by the operator, who had cause to stop the machine. One position occupied by the foreman of the gang is known as the Master Station, and in some of the London offices the foreman is always made responsible for the starting again of the machine after stopping, and has then at his station an extra button, marked "Free." This button is in addition to the six buttons which each operator has, namely:—"Inching"—"Start"—"Accelerate"—"Retard"—"Stop" and "Lock." By this method it is possible for the machine to be stopped and locked by any of the numerous operators, but when locked, no one can start it again until the foreman has pressed his "Free" button.

The functions of the various buttons is interesting:

The "Inching" button causes the press to start and run at its very slowest speed, and to remain at that speed as long as the finger remains on same, and stop as soon as released.

The "Start" button does the same, with the exception that it continues to run at this slow speed even after the finger is released.

Pressing the "Accelerate" button causes the motor to generally accelerate until the top speed is attained, or until the finger is removed. Should the finger be removed before the maximum speed is reached, the machine will continue to run at just the speed at which it was running when the finger was removed.

The "Retard" button has exactly the opposite effect, the machine retarding until the minimum speed is reached, or until the finger is released.

Pushing the "stop" button immediately cuts off the supply of current to the motor, applies the brakes, and is master of all other pushes, that is, the machine will stop when this button is pressed, even if another operator is pushing any other button.

The "locked" button locks all other buttons, with the exception of the "stop" button, and when so arranged, can be operated by the foreman in such a way that having commenced actual printing, and the most efficient speed having been obtained, according to the paper, or ink, or necessity of getting out the edition, he operates one of the "locked" buttons, a red disc appears over each set of buttons marked "locked," and everything is then unoperative except the emergency "stop" button.

The "locked" button would, of course, be used by any operator before going into the machine to adjust or alter anything, or whenever he has to place himself in such a position that the starting of the machine would be likely to cause him bodily harm. Having described the method of control, we will refer to

The Actual Driving of the Machine.

The motor for such large machines must be capable of tremendous variation of speed, and yet be able to develop its full power at whatever speed it is running.

The most popular type of control is known as the Holmes-Clackworthy System, and consists of two motors, one known as the subsidiary motor, and the other as the main motor, the subsidiary machine is a small machine about 12-h.p., which is directly connected to the main motor shaft by means of a worm gear through a self-releasing clutch. When starting up, the small motor takes up the load, and is run from "dead still" up to about 1,500-r.p.m., this being transmitted through a 10—1 reduction gear; this means that the main motor is running at 150-r.p.m. before any current is connected through it.

When the rheostat has taken the sub-motor up to top speed, current is then connected to the main motor, and this accelerates gradually, and eventually over-runs the subsidiary motor, and both electrically and mechanically disconnects itself from it, and the whole of the work is then done by the main motor.

Upon the machine being shut down, the subsidiary motor is again automatically replaced, ready for starting up again.

This method allows of perfect acceleration, from "standing" to full speed, without "jerks," and without excessive demands for current. This system is installed in almost all the main newspaper offices.

A fairly well-known American method is the "Bullock" Teaser System, which consists of as follows:—

Between the main motor and the supply is placed a small motor directly connected to a dynamo, and is termed the "Teaser."

The duties of the "Teaser" are numerous, but all having the same object, namely, the easy regulation of the speed of the main motor; for instance, the motor at first is not connected at all to the full voltage supply, but is supplied by a low voltage generated by the motor-driven dynamo. Seeing that the speed is directly proportional to the voltage, a low voltage means a low speed. This is gradually increased by increasing the dynamo voltage, and eventually connecting the full supply, but in series with the "Teaser." The "Teaser" is then connected to the main motor field, and a very heavy current passed, still keeping the field very strong, and as again the speed is inversely proportional to the strength of the field, this keeps the speed down. Decreasing the current flowing round the field now, gradually weakens the field, and the speed increases, until the motor is running at normal speed. It is now switched right across the mains, and the "Teaser" shut down, any further increase being obtained by weakening the field of the main motor itself. Of course all these operations are carried out quite automatically, and in the correct rotation by the controller.

This system is now considered too complicated, and is being rapidly replaced by the system previously mentioned. Of course there are other systems, but time does not permit of going into them.

(To be continued.)

THE annual prize-giving and concert of Pitman's Schools will take place at the Queen's Hall, Langham-place, W., on Friday, December 12th. when the Right Hon. Lord Kinnaird, D.L., will present the numerous awards, and Sir Robert W. Perks, Bart., will preside. A first-class concert has been arranged to follow the presentations. Admission free, by ticket only. All applications should be made to the Secretary, Pitman's School, Southampton-row, W.C.

Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be endorsed "PATENT DEPARTMENT," Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C. Telegrams: Stonhill, Fleet, London.

Institute of Printers' Visit

TO THE

WORKS OF LINOTYPE & MACHINERY, Ltd.

Another New Linotype Model.

A party of a hundred printing members of the Institute of Printers and Kindred Trades of the British Empire and their friends journeyed from London to Manchester on Thursday evening, for the purpose of paying a whole day inspection of the extensive works of Linotype and Machinery, Ltd., at Broadheath, near Manchester, on the following day. Many visits of different sections of the printing community have been made at various times to the Broadheath Factory, which is one of the largest in Europe occupied exclusively in the making of machinery for the printer, but last week's visit was by one of the largest parties of printers that have availed themselves of the courtesy of the Board of the L. and M. Company, numbering, with further additions on Friday, 120 gentlemen associated with the art preservative.

The interesting occasion was seized upon by the I.P.K.T. to mark the election of Mr. Frank H. Taylor, general manager of Linotype and Machinery Ltd., to the office of Vice-President of the Institute of Printers. Special reserved saloon carriages took the large party to Manchester on Thursday by the 4.30 p.m. train from St. Pancras Station, dinner being served on the train, and on arrival at Manchester the party repaired to the Midland Hotel, where bed-rooms were reserved for them, a sitting-room also being set apart for their use.

On Friday morning, after breakfast at the hotel, a special train conveyed the party to Broadheath, where the guests were formed into convenient parties in charge of Works officials, who were most assiduous in their efforts to convey a clear understanding of the many intricate and delicate operations involved in the making of linotype and printing machinery. The inspection of the works commenced with the Linotype Department. Here the visitors witnessed the making of matrices, each of which goes through some 45 different operations, from the stamping of the little rectangular pieces out of narrow strips of brass by automatic machines that cut up the hard metal as though it were cardboard, to the mathematically exact cutting of the little saw-like teeth in the wedge-shaped incision in the top-edge. Then came the making of the moulds and space bands, each space band necessitating as many as 82 to 83 operations to complete it, whilst to ensure the accuracy of the mould it is tested to the ten-thousandth part of an inch. There are some very fine grinding operations in this department, and, in fact, the number of detailed operations and the exactitude obtained was quite a revelation to the uninitiated. When told that a machine was cutting to the quarter of a thousandth of an inch one could only stare in amazement. In this department the making of automatic screws and studs was seen taking place, also type designing and punch-cutting, and the linotype erecting. In this connection the party had the unique advantage of seeing the latest new model linotype, Model 67, being worked for the first time. It is intended for the book work trade, and has four magazines and two distributors, and is the last word, *as yet*, in linotype construction. The interesting process of manufacture of these machines was seen right through from the pattern making and moulding of the framework to the completed machine.

The General Machinery Department contained much of particular interest to the visiting printers, as well as much to admire in the beautiful workmanship entailed in the manufacture of Miehle, Centurette, Litho Rotary, and Offset Litho Rotary presses, the Autoplate and the Rotary Web Press, many of which were in the course of erection for eminent firms, and some were complete and running at their maximum speed. The fitting of printing machinery parts was another interesting process taking place in this department.

The Machining and other departments inspected were: the gear cutting, milling, drilling, turning and planing; the Power House, where from 3,000 to 3,500 h.p. is generated by several different types of engines; the Foundry and Smithy, where in the morning the visitors saw the process of making the moulds for the parts of machinery from start to finish, and in the afternoon they saw the molten metal conveyed from the furnace to the moulds and poured therein, one of these being for the cylinder of one of the large printing machines; the Testing Department, where some very delicate and fine work is done; the Drawing Office, where it was seen how exceptionally perfect the formation of the letters for the moulds of the linotype has to be, as proved by various special apparatus; and the Pattern Making and Joinery department, quite a woodworker's art in itself.

One of the remarkable features of these extensive works, which was the source of general comment, was the wonderful mechanical ingenuity shown in the numerous machines that were running and accomplishing their particular work quite mechanically, with no attendant, apparently only needing their attention when the work was finished, in order to remove it and supply the machine with fresh material. For instance, there were many machines cutting the cogs in cog wheels, the wheels, when one deep cut had been made into its periphery, mechanically revolving to the exact position for the next cut to be made, and so on till completed. And so it was with other machines, each also mechanically feeding itself with oil, with a liberality characteristic of the Company, but also tempered with a wise economy in the prevention of needless waste, as the plentiful flow of oil is afterwards collected, strained, and used over again. Other interesting features will have appealed to the attention of other individuals, and certainly all came away delighted with what they had seen, and holding the printing trade in much higher estimation than hitherto.

Mr. Frank H. Taylor,

General Manager, Linotype and Machinery Ltd.

A pleasant break and welcome rest was provided at noon by the provision of an excellent luncheon in the Works. Sir Joseph Lawrence (chairman and managing director) presided, with Mr. Edgar Waterlow on his right and Mr. George Eaton Hart on his left, there also being seated at the head table Messrs. Frank H. Taylor (general manager), W. H. Lock, C. Eves, A. H. Pollen, H. J. Goss (chairman of Council of Institute of Printers), C. H. Roud (deputy chairman of Institute of Printers), T. E. Wells, H. Pearce, J. Vernon, and W. E. Hebditch. The following is a list of the guests at the luncheon:—Messrs. E. R. Alexander, the Era Press, Leyton; J. Amoy, City Trade Printing Works; A. Bennett, J. Truscott and Sons, Ltd.; H. W. Birdsall, Birdsall and Son, Northampton; E. J. Booker, Press Printers, Ltd.; W. Boutall, Herne-hill; R. B. Brett, R. B. Brett and Son; F. R. Briant; F. W. Bridges, *Caxton Magazine;* E. J. Brown, Lake, Sison and Brown, Ltd.; W. H. Burchell, Caxton Press, Ltd.; E. W. Carter, W. Speaight and Sons; J. H. Coleman, *News of the World;* H. A. Clarke, F. W. S. Clark and Co., Ltd., Leicester; C. R. Cook, Avenue Press, Ltd.; E. R. Cooke, Badoureau and Jones, Ltd.; J. A. Corey, Eyre and Spottiswoode, Ltd.; C. J. Drummond, Secretary, I.P.K.T.; H. Featherstone, R. L. Lundgren; T. W. George, *Daily Mail;* J. Goozzee, *Field and Queen;* H. J. Goss, H. J. Goss and Co., Ltd.; H. Gravestock, W. Cooper and Nephews, Berkhamsted; A. G. Gronow, Waterlow Bros. and Layton; A. L. Harber, J.P., Hughes and Harber, Ltd., Longton, Staffs; A. Donald Harber, Hughes and Harber, Ltd., Longton, Staffs; F. W. Harcourt, Heneage-lane; D. Harding, Suffolk and Watts, Ltd.; H. J. Hardingham, W. H. Smith and Son; C. Harrap; G. E. Hart, St. Clement's Press, Ltd.; J. Hayes, Hayes and Matthews; W. E. Hebditch, Eyre and Spottiswoode, Ltd.; H. R. Heyward; T. J. Hunt, Garlick-hill; J. J. Jagelman, United Newspapers, Ltd.; A. E. Jarvis, Eyre and Spottiswoode, Ltd.; G. W. Jones, Gough-square; H. W. Jordan, Jordan and Sons, Ltd.; W. Keating, Alfred Berridge and Co.; E. C. Keliher, J. J. Keliher and Co., Ltd.; C. Keliher, J. J. Keliher and Co., Ltd.; A. Langley, Langley and Sons, Ltd.; E. C. Langley, Langley and Sons, Ltd.; A. Legg, Darling and Son, Ltd.; G. H. Limbrey, Solicitors' Law Stationery Society, Ltd.; W. Marshall, Allen and Hanburys, Ltd.; W. A. Masters, Ernest Nister; Alex. Smith Mitchell, Classic Colour Press, Reading; J. Mortimer, Printers' Pension Corporation; G. K. Naylor, L.C.C.; R. A. Peddie, St. Bride Institute; W. Penman, W. Penman and Sons; G. Phillips, Odhams, Ltd.; O. Pickford, United Newspapers, Ltd.; W. Brett Plummer, J. Swain and Son, Ltd.; J. R. Riddell, St. Bride Institute; N. T. Riddle, Riddle, Smith and Duffus; M. C. Ritchie, Farringdon-road; C. H. Roud, Bank of England; E. H. Rudd, *Illustrated London News*; C. Salter, Blades, East and Blades; T. Sanders, Newspaper Proprietors' Association; W. D. Sarjeant, Eastern Press, Reading; J. Sharp, Lake, Sison and Brown, Ltd.; J. E. Shaw, Hayman, Christy and Lilly; J. J. Smith, Comptelburo, Ltd.; P. G. Smith, *Newspaper World*; R. E. Thomas, R. E. Thomas and Co.; J. Vernon, Waterlow and Son, Ltd.; Toye Vise, *Stationer and Printer*; E. H. Walker, Usher and Co; W. R. Walker, Roberts and Leete, Ltd.; W. H. Wardley, *British and Colonial Printer and Stationer*; Edgar Waterlow, Waterlow and Sons, Ltd.; E. W. Watkins, The Vandyck Printers, Ltd.; W. T. Welfare, W. H. Smith and Son; T. E. Wells, Eyre and Spottiswoode, Ltd.; H. Whetton, *British Printer*; H. P. White, H. P. White and Co.; F. H. Williams, W. Cooper and Nephews, Berkhamstead; W. S. Wilson, Menpes Printing Co., Ltd., Watford. Amongst other officials of the Company were Messrs. G. W. Davis, C. W. Shortt and W. M. Bower.

After luncheon each guest was presented with a souvenir of the visit in the form of a handsome leather sovereign purse with the date stamped in gold inside, and a few toasts were honoured.

The CHAIRMAN expressed how glad his colleagues and he were at having the members of the Institute of Printers with them as guests, and said they welcomed them there because they believed that closer intercourse between the manufacturers of machinery and those who used it in their daily avocations would be beneficial to all parties concerned. (Hear, hear). They did not regard that day's function in any sense as a business engagement; they valued it for the sake of the social intercourse it was the means of promoting. He was instructed to say that those responsible for the organization of this visit, especially his friend Mr. Drummond—(applause)—had received a large number of replies to the invitations sent out, in which the writers expressed regret for their inability to attend, notably from their friend Sir George Riddell, who was kept in town by circumstances of an important and urgent character; also from their old friend, Sir Thomas Bowater, now Lord Mayor of London; Lord Hamilton, Sir Adolph Tuck, Sir Frank Newnes, Mr. Alfred Blades, Mr. Hugh Spottiswoode and others. They also regretted the absence of Sir Philip Waterlow, a vice-president of the Institute of Printers, but they were pivileged to have amongst them his son, Mr. Edgar Waterlow. (Applause). He hoped after what they had seen in the Works that they had found evidences that the Company, founded twenty-five years ago, had not been asleep in the meantime—that it had been going on from point to point in the great process of evolution that was going on in the printing world. There was no finality about it. And the machines they bought to day they hoped would be out of use in four or five years' time. (Laughter). In fact the number they were turning out of all classes of machinery was so great now that the officials of the Company—including their friend Mr. Frank Taylor, to whose initiative and brilliant forethought this gathering was entirely due—were finding some difficulty in cataloguing all the machinery they were making, as they would have observed in passing through the erecting shops where there was a Miehle machine to which they had been unable to give a number and had therefore given it six noughts. (Laughter.) What it would be like in five or ten years time it was impossible to say; it would probably be a long string of noughts. He regretted the weather had been so inhospitable for them that day, but assured them that the Company's welcome was none the less warm. They had had a foretaste of the kind thought of Mr. Taylor in the shape of the gift of a sovereign purse as a souvenir of the visit. (Applause.) Referring to the co-operation of the Company with the kindred companies of America and Germany, the chairman remarked that this had not impaired their finances in any way, nor had it led to an increase in prices. During the last ten years they had had to bear heavier expenses in the payment of higher wages and the greater cost of materials. There was, however, perfect freedom of trade and they all

Digitized by Google

benefited by the brains of the companies with whom they interchanged improvements without cost to each other. This combination of the human intellect, of capital and of energy in the three most progressive nations of the world must be for the benefit of the whole country. He hoped this day would be the fore-runner of many other similar gatherings with his friend, Mr. Frank Taylor. He asked them to join with him in drinking to the health of the Institute of Printers and Kindred Trades, coupled with the name of Mr. Edgar Waterlow. (Applause.)

Mr. EDGAR WATERLOW expressed sincere thanks to Sir Joseph Lawrence and the Company he represented for the great hospitality that had been shown to them. Having accepted this hospitality, could they go back without leaving something behind? Two members of his own company were there that day, Mr. Vernon and himself, and they had put their heads together and had decided to buy two printing machines to show that they both appreciated their hosts' hospitality. He hoped each one present would do the same. (Laughter.) They were indebted to Mr. Frank Taylor for the idea of enabling the members of the Institute of Printers to visit these works. Most great ideas emanated from America; they were colossal in everything they did. This building was colossal, and everything they supplied to the buyer in England. They could not in the neighbourhood of London have anything like such a structure. The huge vista of machinery to be seen in the Miehle department would be impossible in London. They were exceedingly obliged to Mr. Taylor for the idea, and to the Company for the handsome manner in which they had carried it out, and he therefore asked the visitors to give a hearty vote of thanks to the Chairman and Board of Directors of the Linotype Company. (Applause.)

Mr. FRANK H. TAYLOR, in returning thanks on behalf of his colleagues and himself, said the occasion of the visit arose from the honour that had been conferred upon him when he was elected a junior vice-president of the Institute of Printers. He desired to do something in recognition of that honour, and it occurred to him that it would be as useful for them to come to the Broadheath Works, as it would be to the company to have them. He wished to correct a wrong impression that seemed to prevail, that the Yankees had something to do with the growth of these Works. All the machinery in the place, the buildings that had been erected, and the advances that had been made there—except the use of patents and the privilege of doing certain things—were not only initiated and bought, but entirely planned out by an English force. When he came over here he made up his mind there should be no other Yankees here. (Laughter and applause.) He had seen lots of failures—men from America coming over to England to change them and generally making the mistake of bringing men to help them, especially men possessed of things they themselves recognised they were weak in. (Laughter.) He found such men over here as were to be found in these Works to-day, and they had as good an organisation and staff here as could be found anywhere in the world. (Applause.)

Mr. H. PEARCE, works manager, also replied, remarking that the Works were run entirely for the benefit of the printing trade. It gave him much pleasure to have had the opportunity of showing them the Works and the way the machinery was built there, in the hope that they might convince them that they did their utmost to supply machinery that was perfect when it left the Works and that would keep perfect ten years afterwards. They did not stand still; no sooner had they finished one design than immediately they were thinking how they were going to better it. (Applause.)

The CHAIRMAN said he did not think they should separate without a word from Mr. Drummond, whom he had known for long as a sterling good friend in anything connected with the printing trade.

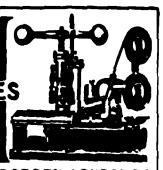
Mr. C. J. DRUMMOND acknowledged the compliment paid to him by the chairman, and thanked those present for the appreciative way they had received him. In an interesting speech he referred to the introduction of the Linotype and the difficulties that were surmounted with so little friction, considering the revolutionary nature of the invention, and paid tribute to the enormous advantage it was to the printing industry. The visit, he said, had been very interesting, and the part of the building that had impressed and interested him most had been that portion which dealt with the Linotype machine. They had seen a new machine about to be placed on the market, and they would agree with him that it was a wonderful production. He took the opportunity of proposing a very hearty vote of thanks to their chairman, testifying to the great ability with which he had dealt with the management of the Company for so many years, and spoke of his many-sidedness, characterising him as one of the best friends the printing trade had ever had.

The health of the Chairman having been drank with musical honours, Sir JOSEPH LAWRENCE replied, and proposed the health of Mr. W. H. Lock and other members of the staff who had contributed to the enjoyment of the visitors.

The toast was cordially received and Mr. LOCK briefly returned thanks, and the proceedings terminated.

The inspection of the works was resumed after luncheon, the first thing to attract attention being a newly-invented machine, the Auto Trimmer, which is an improvement on the one previously in use for this purpose, performing the work of trimming the curved stereo plates more automatically and more perfectly.

A photograph of the large party was taken in front of the entrance to the works, and the visitors left about five o'clock for Broadheath Station, from whence a special train conveyed them to London-road, Manchester, and they returned to London by the 6.15 p.m. train, in specially reserved saloon carriages, dinner again being served in the train, which reached Euston Station exactly to the minute, after a very comfortable run.



THE index and title-page to Volume seventy-two of the *British and Colonial Printer and Stationer* is now ready, and it being contrary to postal regulations to enclose it as a supplement to our usual weekly issue, a copy will be sent to any reader desiring it on receipt of a penny stamp.

A NEW monthly review, entitled the *International Review of Commerce and Industry*, has made its appearance. A foreword informs us that it "will be written for the principals of great commercial firms having business interests in all parts of the world." The publishers are L. Upcott Gill and Son, Ltd., Drury-lane.

LIABILITY FOR ADVERTISEMENTS.—In the City of London Court, the other day, before Judge Rentoul, K.C., Messrs. Ward Lock and Co., Ltd., publishers, Warwick House, Salisbury-square, E.C., sued Mr. J. D. Wertheim, lately trading as the Puttagoff Manufacturing Co., Gamage-buildings, Holborn, for £7 16s., advertisements inserted in the *Windsor Magazine*. The defence was that the A.C.S. Syndicate, Ltd., were liable. One of the plaintiffs' canvassers said that he took the order from Caffery, defendant's then manager. He knew nothing about the A.C.S. Syndicate, Ltd. Caffery was called by the plaintiffs, and he said he gave the order on behalf of the defendant. He was the defendant's sales manager. All he knew about the A.C.S. Syndicate was that defendant told him it would take over the Puttagoff Manufacturing Co. Sometimes he was told to put a rubber stamp on the letters that went out with the name of the A.C.S. Syndicate, Ltd., on them and sometimes with the names of other companies on them. There were half-a-dozen rubber stamps of half-a-dozen companies in the defendant's office. Witness signed as manager of all or any of them but it did not make him such. Defendant paid him his salary. In cross-examination he admitted that he had sworn affidavits describing himself as the manager of the A.C.S. Syndicate. Defendant said he never carried on business as the Puttagoff Manufacturing Co. and he never gave Caffery authority to give the plaintiffs the order for the advertisements except on behalf of the A.C.S. Syndicate, Ltd. The A.C.S Syndicate, Ltd., was liable for the amount of the plaintiffs' account. He owned 20 shares in the company—his qualification shares as a director. Mr. S. Jones, plaintiffs' solicitor, said that the plaintiffs knew nothing of the A.C.S. Syndicate, Ltd. Judge Rentoul said he was sorry that the law required him to find for the defendant, although the decision according to justice, would go the other way. He was bound to hold that Caffery gave the orders to the plaintiffs on behalf of the syndicate.

ACCORDING to the Labour Department of the Board of Trade, 1,914 persons were employed last year by co-operative consumers' societies, their total annual wages amounting to £107,920. In addition, 1,066 persons were employed by similar associations of workers, their total wage being £70,352.

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help a-d an ornament thereunto."
FRANCIS BACON, Baron Verulam.

Mr. Goodwin, the organiser of the Federation Costing Committee, is visiting Scotland just now.

o o o

It's no special business of his to recapture a lot of the book work Edinburgh long ago sto—no, no, no—captured from London; but if he could just melt the hearts of a few printers across the border and get them to let us have just a wee bit of it back, the gift would be received with the most heartfelt surprise.

o o o

Poor old London. It's always getting buffetings of some sort. It's always being killed. It almost seems to like it.

o o o

Dutch typefounders were once battering upon London. Certain Bishops used to stipulate that books they published must be printed in Dutch type.

o o o

Caslon recaptured that position for us nearly 200 years ago. It's a tougher job to recapture London's book trade.

o o o

What a Noah's dove our costing organiser is. East, West, North and South Mr. Reginoah Lake (I hope that's not libellous) sends him forth from the ark on Mount Buchanarat to see whether any printers are getting any firm ground firm under their feet.

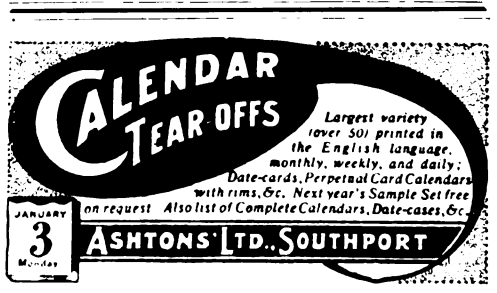
o o o

He improves on the earlier dove's solitary olive leaf performance. He keeps coming back with olive leaves and evidences of this peak and of a man here and that craggy old Caxtonian yonder who have sturdily refused to be submerged; whose heads are and have always been well above water.

o o o

He was at Dorchester lately. The country has one very notable printerian association. I am thinking of the large Butler and Tanner printery at Frome. I write as one who in other days had cause to acknowledge much friendliness from some members of the Tanner family. Those whom I knew well are not, I think, financially connected with the printing firm; but never mind about that. I cannot feel indifferent to any bearer of the name of Tanner. It would please me particularly to see one or more of the partners in the Frome establishment taking a prominent place in the forward movement in the craft consonant with the scale and importance of their enterprise.

o o o



So far as giving a lead in technique is concerned, there is not much to ask of them that is not already forthcoming; they do notable things now, and my impression is they are going in 1913 to give a rather special lead to the craft in one particular technical direction.

o o o

But I want to see them come into the open. I want them to be right in the forefront of all associated effort making for the craft's amelioration. We can possibly do without the help of this or that large employer, but we could do much better with it.

o o o

More contact with them would do us good; more contact with some of us might do them good. By which I mean no more than that iron sharpeneth iron. In my unofficial and unofficious way, I put it to these gentlemen with very real respect for the name they bear, to co-operate in this cost reforming, and in any craft reforming movement, to the extent not of what they feel they must do but to the extent of all they can do.

But that dove's been fluttering about near the window. I must pull it in, and go on with its story.

o o o

Mr. Goodwin went lately to Dorchester, and Dorchester is sound on costs, and so, I think, is Weymouth so far as indications go.

o o o

By the way, one of the Byles family has apparently bought the good old business of of Mr. Sherren. I judge that no one has more worthily upheld the good name and fame of the printer than Mr. Sherren.

o o o

"Troops of friends" appear to have been among the rewards of his advancing years, and another solace has been the satisfaction of seeing a son well established as a practitioner in the inner circles of the medical profession in the West-end. Mr. Sherren must have studied his costs.

o o o

From Dorchester to Norwich, there's a stretch for you; and its all the same tale. Forty-five master printers recently turned up at a Norwich meeting. Fletcher's have the Federation's Costing System going very well; and he with both his frank admissions of defects discovered and the outstanding evidence of business competence, has been a great help.

o o o

Then Mr. Goodwin met a few printers in Stoke-on-Trent a short while since. Ten of them were either installing the system or just about to do so. One firm was disposed to seek rather special assistance from the Federation, which was readily forthcoming.

o o o

At Leek, hard by, six of the nine master printers in the town recently met, and decided to form a Leek branch of the Federation.

o o o

The Johnson brothers, of York, have done yeoman service; alluring to brighter balance-sheets and leading the way. They've prepared charts showing how different allocation of expenses affect the price of jobs.

o o o

Mr. J. E. T. Allen is naturally a tower of strength in Manchester district.

o o o

Mr. Goowin, as I understand, speaks at the Manchester School of Technology on December 6th.

o o o

In Liverpool fourteen or more printers have intimated that they are altering their own systems, or are about to do so.

o o o

A fresh Costing Committee has been appointed. It consists of Messrs. Howard Hazell, Austen Leigh, W. A. Waterlow and Herman Lea, who were stalwarts of the old body, and the additions are Mr. J. T. Cooper (of Cooper and Budd), an exceedingly fine printer of more than national repute, M. Geo. Eaton Hart, Mr. Keliher, Mr. J. H. Johns (Finsbury), Mr. J. R. Burt, Mr. Matthieson (of Burrup, Matthieson and Sprague), and Mr. Harold Curwen.

o o o

Those who know these gentlemen (and that surely means all live printers) will recognise what a very great access of strength these appointments represent.

FRANK COLEBROOK.

A VERY fine calendar for 1914 is being sent out to customers by Messrs. Taylor and Watkinson, of the Belgrave Foundry, New Briggate, Leeds, the well-known printers' lead and clump manufacturers. It is 18 by 12 inches in size, and consists of a heavy card with sunk panel, on which is a reproduction of one of John Noble Barlow's paintings, "Evensong," a picture that is a typical and excellent example of the art of this noted landscape painter. With wonderful fidelity to nature the artist has painted the deepening shadows and the soft hazy atmosphere. The old church, surrounded by fine trees, fast losing their foliage as winter's reign draws nearer—with its warm glow of colour, gives a pathos and wealth of sentiment to the picture. In the gradually deepening shadows may be observed the simple country folk on their way to church. It is as though all nature had sought and found a moment of complete rest. The firm's business announcement appears on the margin of the mount, and the calendar is a very fine one. A smaller calendar accompanies the large one just mentioned, on which is a pretty picture entitled "Twilight on the Orwell," from a painting by F. G. Cotman, R.I. This picture is also in colours, and is mounted on a wide-margined card, with the dates on tear-off sheets at the foot. Both calendars are got up in a very tasteful manner, and will be appreciated by recipients.

Love and Malcomson's Compositors' ANNUAL DINNER.

The annual dinner organised in connection with the compositors' chapel of Love and Malcomson's Printing Works, Dane-street, High Holborn, was held on Saturday last, at "Ye Olde Mitre," Chancery-lane. A company numbering about seventy sat down to a capital spread under the chairmanship of the manager (Mr. A. C. Gronow), with Mr. E. H. Campling (overseer) in the vice-chair. Among others present were Mr. Stuart Malcomson (representing the firm), Messrs. Alway and Geale (overseer and accountant respectively of the firm's Redhill establishment), Messrs. Mitchell (overseer of the warehouse), W. A. Perkins (head reader), H. E. Kelly, A. Nicol, F. Coleridge ("Imperial" Father), W. H. J. Symons ("Lino" Father), and A. Young (Clerk of the Chapel).

After dinner, the time was profitably occupied in song and speech, a short toast list being interspersed with the musical items.

Mr. Coleridge, in giving "The Firm," welcomed the presence of Mr. Stuart Malcomson at that gathering, and hoped on a future occasion to see more of them there—perhaps the whole board.

Mr. Stuart Malcomson thanked the company for the reception of the toast, and assured them of the pleasure he had in being present.

The Chairman, in replying to the toast of his health, which was drunk with much enthusiasm, commented upon the increasing prosperity of the firm, and remarked that it was his earnest wish to maintain good relations with everybody engaged in the house.

Mr. Alway replied on behalf of "The Visitors," and said the thing which he liked about the gathering was the good fellowship which seemed to exist among those present without distinction of grades.

Another toast which was greeted with great heartiness was that of "The Vice-Chairman," and Mr. Campling, in reply, said that was the third of their dinners he had attended. He hoped he would be spared to work with them and to attend those annual functions for a great many years.

"The Health of the Stewards" having been duly honoured, the Chairman gave "The Father of the Chapel," and in doing so referred to the amicable manner in which everything was arranged between those gentlemen and the representatives of the firm.

Mr. Coleridge, in reply, gave an instance of the way in which the manager considered the interests of the men. While that kind of spirit prevailed they could not but get on well together.

Mr. Symons also replied.

Those who contributed to the musical programme included Messrs. E. Thorne, W. G. Baker, J. Dougherty, Andy Gemmell, C. Pope, R. Dowling, A. Mitchell, T. Long, and R. Smith, some excellent "local" talent being included among them. Mr. Will Seymour acted as accompanist. The arrangements were carried out in an excellent manner by Messrs. W. A. Hooper and A. Hanson who acted as stewards.

The menu card was an artistic production in red, green, and gold, which reflected great credit upon its designer (Mr. A. R. Ambrose), also upon the pressman (Mr. W. Barker).

The gathering was highly successful in every way.

MUCH excellent colour printing is in evidence in the December *Pearson's Magazine*, and there are stories and articles well designed to appeal to every possible taste. The Hon. John Collier is an artist who enjoys wide popularity, and it is a pleasure to find all his well-known "problem" pictures assembled together as illustrations to an article on "Life's Little Tragedies." This is followed by a contribution in lighter vein from Mr. Arthur Collins of Drury-lane fame, who writes on "Pantomimes and Players." Miss Jessie Pope's advice as to "How to Amuse the Boys and Girls" will come as a boon to many a distracted hostess, and "Fortunes in Furs" should appeal to every feminine heart by reason of its captivating illustrations of fair Parisiennes in the latest of "furry" garments. Miss Beatrice Grimshaw has an adventurous romance called "The Sorcerer's Stone." Captain Harry Graham is represented by the first of a new series under the heading "The Complete Sportsman." "Fancy Dresses and Fancy Dances," by Mr. Philip O'Farrell, manages to convey some helpful hints in light, amusing style, and the coloured illustrations by Mr. W. E. Webster are a feature of the number. Other authors and artists whose work appears to advantage are Dr. R. Austin Freeman, Lady Sybil Grant, Messrs. Edgar Jepson, J. J. Bell, Gilbert Holiday, Christopher Clark, R.I., Heath Robinson, Réné Bull, Dudley Buxton, Edmund Blampied, Lewis Baumer, and Treyer Evans.

Trade Notes.

THE City reporters' third annual dinner was held at the Trocadero, on Saturday. The gathering was presided over by Mr. W. Chisholm (*Mining World*), one of the oldest City journalists.

ON Monday, at the French Embassy, Mr. Frederick W. Emett, of Reuter's Agency, was presented with the insignia of the Chevalier Etoile Noire, which has been conferred upon him by the President of the French Republic.

THE Christmas *Bookseller* is a finely printed issue containing particulars of, and illustrations from all the principal books that have been got ready for the Christmas trade, and will be of great service to all who deal in literature.

THE annual staff dinner of the Argus Printing Co. and the *Sunday Times* was held at Anderton's Hotel, Fleet-street, E.C. The gathering numbered close on 200 persons, and was presided over by Messrs. H. Schmidt, W. Miles and A. Rowland Harris. The proceedings throughout were most enjoyable.

A LECTURE will be given at the Victoria and Albert Museum, on Thursday, December 11th, by Mr. G. H. Palmer, on "Early Printed Books." Admission will be free, by ticket only, for which application must be made before the date of the lecture either at the Museum entrances, or by letter addressed to the director and secretary.

ON Tuesday Messrs. Cerebos, Ltd., salt manufacturers, were awarded £100 damages, in the King's Bench Division, for libel against the *Winning Post*, which in March last printed the following paragraph: "Romano's is to be congratulated. It is one of those restaurants that have discarded Cerebos for real salt." As stated, the jury, after a hearing, returned a verdict for plaintiffs, and judgment was entered accordingly, with costs.

A USEFUL calendar desk pad is being sent out to customers by Messrs. John Kidd and Co., Ltd., printing ink and roller manufacturers, 11, Wine Office-court, E.C. It is 10 by 6 inches in size, each sheet containing a week's dates with space for memoranda, engagements, etc. The firm's business announcement is blocked in white on a red ground at the top of the pad, and there is a complete calendar for the year on the back.

ON Thursday evening last about 200 members and friends of the Society of Authors met at the Criterion Restaurant on the occasion of the annual dinner, under the chairmanship of Mr. H. Hesketh Prichard. Field-Marshal Earl Roberts was present, and the guests included Sir Arthur Conan Doyle, Miss Marie Corelli, Mrs. Elinor Glyn, Mrs. Humphry Ward, Mrs. Bullock Workman, and Messrs. Francis Gribble, W. W. Jacobs, E. Temple Thurston, E. Phillips Oppenheim, and Douglas Sladen.

"PENROSE'S PICTORIAL ANNUAL" (the "Process Year Book"), which will be published shortly, has this year been greatly enlarged and improved. It reviews the progress made during the year in all illustrative methods, and, for this reason alone, should be in the hands of every progressive man. Besides being a beautiful picture book it contains a host of exceedingly interesting articles on many subjects intimately associated with the graphic arts, and is of special interest to printers, engravers, photographers, artists, advertisers, and all lovers of beautiful pictures. The price is 5s. net, from Messrs. A. W. Penrose and Co., Ltd., 109, Farringdon-road, E.C.

TENDERS WANTED.—For general printing for five or seven years for the Camberwell Borough Council; forms of tender from the Printing Office, Town Hall, Peckham-road, S.E. For the supply of books and general stationery for the Guardians of West Ham Union; forms of tender from Mr. T. Smith, clerk, Board Room, Union-road, Leytonstone. For printing rate books for the Wandsworth Borough Council; forms of tender from the Council House, East-hill, Wandsworth, S.W. For the supply of exercise books, foolscap papers, drawing books and papers, stationery, reading books, charts, and general publications, kindergarten materials, etc., for the Wolverhampton Education Committee; particulars from the Accountant, Education Offices, Town Hall, Wolverhampton. For a supply of books, printing and stationery for three years, for the Prescot Guardians; specifications may be obtained from the Union Offices, Whiston, Prescot. For printing the registers of Parliamentary, County Council, and parochial electors for three years, for the Isle of Wight County Council; particulars from Mr. J. Dufton, County Council Offices, Newport, I.W.

THE "Engineering Directory," issued by *Engineering*, Ltd., Bedford-street, W.C., has now attained to its fifty-seventh number, and contains a classified list of the leading firms in the engineering world together with their telegraphic addresses, codes and telephone numbers, as well as glossaries for the use of foreign buyers. The "Directory" is distributed gratis, over 100,000 copies being sent out every year to all parts of the world.

A DEBENTURE JUDGMENT.—A motion was heard last week by Mr. Justice Sergent, sitting in the Chancery Division of the High Court of Justice. It was listed in *re* The Ludgate Printing Co., Ltd., Oliver *v.* The Company, and was a motion for judgment in default of defence in a debenture action. The plaintiff held 16 debentures out of 20 authorised, and 19 of which were issued, the bonds being for £50 each, and it appeared that he had paid £280 2s. 8d. in cash in respect of them. There was no opposition, and an ordinary judgment in a debenture action was entered.

TENDERS ACCEPTED.—For various supplies, for the Whitehaven Education Committee (recommended for acceptance), stationery, etc. (section A), W. H. Moss and Sons, Ltd.; kindergarten (section B), R. Burlington; reading books, W. H. Moss and Sons, Ltd.; printing and office stationery, T. Brakenridge and Co, Ltd. For printing work, for the Bridlington Corporation (accepted), Jowett and Sowry, Leeds, 118 copies of the year book, six calf-lined russia cases. A. J. Brown, printing 75 copies of the Council minutes each month. C. Forster and Co., printing 100 copies of the committee minutes each month.

FROM May to October in 1914 an Anglo-American Exhibition is to be held at Shepherd's Bush, to celebrate the hundred years of peace and progress between the English-speaking people of Great Britain and the United States. A century's advancement in education, science, art, literature, inventions, the manufacture of all kinds of goods, transport, light, heat, power, etc., will be demonstrated in the most attractive manner, and be a special feature. The Duke of Connaught is acting as the patron of the Exhibition, and the Duke of Teck has consented to be the president. The Earl of Kintore is chairman of an influential Executive Committee. With regard to trade exhibits as well as historic objects of interest the Earl of Kintore says that they are likely to be more numerous and better organised than at any previous show within the metropolitan area.

PRINTERS' WAREHOUSEMEN'S PENSION.—The first concert of the season was held on Monday, at the "Red Lion," Red-lion-court, E.C., when the chairs were taken by Mr. R. Apps (*Gentlewoman*), Mr. J. Southey (*News of the World*), and Mr. W. H. Hillman (Fleet Printing Works), who were supported by Mr. J. Rawlings (Odham's), and Mr. H. Budd (Eyre and Spottiswoode). Quite a host of talent appeared, and included Miss Amy Orchin, a sweet soprano; Mr. John Regan, the popular baritone; Mr. G. Biss, a pleasing tenor; Mr. H. Chalk, Mr. H. Berry, Mr. Lionel James, Mr. A. Dent, Mr. Frank Carlton, an entertaining raconteur; Mr. Len Austin, a capital comedian; the Three Gees, with their ragtime melodies; Mr. Fred. Vernon, a popular favourite at these gatherings; Messrs. Lester and Harvey, patterers, and other entertaining items. The "plate" realised £18, and the chairman and their supporters heartily thanked their many friends for their splendid help. Praise is due to Mr. Geo. Scotter, who was a painstaking pianist, and the whole ehtertainment reflected the highest credit upon the energetic hon. secs., J. S. Edwards and H. Whitlock, who, together with the hon. treasurer, Mr. T. McCaffrey, and Mr. J. F. V. Bennett, the musical director, attended to every detail for the comfort of their patrons.

A CLAIM FOR PHOTOGRAPHS.—In the City of London Court, last week, the case of Scriven and Co. *v.* Wakefield and Co. was before the Court and finally disposed of. The plaintiffs, of 35 6, Hosier-lane, sued the defendants, trading as the Applied Arts and Antique Co., 9, Howland-street, Tottenham-court-road, for 17s. 6d. for photographs supplied. The case had been before the Court on several occasions, the proceedings at the time being reported in the columns of the *British and Colonial Printer and Stationer*. Upon the case being called, the Registrar said he thought the matter had been settled. The plaintiff, Mr. Scriven, said that was so. He had made some new photographs for the defendant which had been accepted, and some part of the order it was agreed should be cancelled. The Registrar said he did not know why, if the parties had settled the matter, they should appear at Court. The plaintiff said he thought he had to put in an appearance. The defendant said that the plaintiffs had made two fresh photographs for him which he had accepted. The plaintiffs, he understood, were willing to accept £1 to settle the matter, and that sum he was prepared to pay. He did not think he should be called upon to pay the costs of the previous attendances at Court. The Registrar said he was not going to make any order as to costs. There had been a fresh bargain made, and the parties had settled the matter. The defendant said he would give £1 to settle the matter. The plaintiff said he would accept it. The Registrar: Then why come to the Court wasting your time like this.

ADVERTISING IN FRANCE.—It will be noticed from an announcement on another page that we have been appointed the London agents of *Le Courier du Livre*, a bi-monthly Parisian journal, devoted to the printing and kindred trades, which is now in its fifteenth year of publication. It is one of the most newsy and practical of our many Continental trade contemporaries, gets into the best French printing establishments, and amongst the right people, and thus constitutes an advertising medium of unusual value to all those who are intending to enter the French market with any plant or machinery appealing to firms engaged in the printing and kindred industries. We shall be pleased to furnish, on application, a specimen copy of, and scale of charges for advertising in, the *Courier du Livre*.

THE special Christmas number of the *Auckland Weekly News*, which is just to hand by the New Zealand mail, is quite up to the usual high standard of that publication, to which in past years we have referred in terms of highest praise. The contents deal with New Zealand life and scenery, and the large half-tone illustrations with which the issue is filled are most beautifully reproduced. Many of them being worked on tints, and having artistically designed and appropriate borders. The cover is in colours, and two coloured pictures of New Zealand scenery accompany the number. The whole of the work has been done in the establishment of Messrs. Wilson and Horton, the proprietors of the *New Zealand Herald* and the *Auckland Weekly News*, and is a credit to all concerned, the whole issue being of a high-class character, and equal to anything ever produced in the old country.

THE Christmas double number of the *Windsor Magazine* is an excellent issue. The fine art subjects include facsimile coloured plates reproducing important pictures by Sir John E. Millais, P.R.A., B. W. Leader, R.A., Sir John Gilbert, R.A., and Sir Lawrence Alma-Tadema, R.A., accompanying a survey of the pictorial treasures of the Guildhall Art Gallery of the City of London. Many famous novelists contribute their latest stories to the fiction programme of the issue, and other writers of note are responsible for important features, among them Sir H. Rider Haggard, Anthony Hope, Halliwell Sutcliffe, Beatrice Harraden, "Q.," H. B. Marriott Watson, Charles G. D. Roberts, Edgar Wallace, Arnold Bennett, Eden Phillpotts, E. F. Benson, S. Macnaughtan, Barry Pain and other authors almost equally well known. This number of the *Windsor* is an uniqne Christmas annual of the utmost attractiveness.

ARE COLOURED ADVERTISEMENTS PREFERABLE?—In the City of London Court, on Friday last, before His Honour Judge Rentoul, K.C., the Phono Press, 40, Fleet-street, claimed £11 19s., against Mr. Gabriel Parés, manufacturer, 15, New Oxford-street, for advertisements inserted in the *Phono Record*. Mr. Collyer appeared for the plaintiffs. Mr. W. J. Williams, 15, New Oxford-street, had been added as a co-defendant and he alone defended the action. He said he gave the order as agent for Parés, who was in Paris. Mr. Collyer said they knew nothing about Parés other than through Williams. Judge Rentoul did not think it probable that the plaintiffs would trust a Frenchman in France. Williams said that the invoice was made out to Parés. Mr. Collyer pointed out that Williams had paid £1 1s. on account and had never disclosed his principal. They thought he was Parés until they got into Court. Williams was liable in law to the plaintiffs. Judge Rentoul thought that Williams was undoubtedly liable. He gave the order on behalf of his firm of Pares who would pay Williams. If the firm was a valid one it would pay Williams, who had given the order as an undisclosed principal. Williams said that he objected to the amount. The advertisements had brought him nothing. Judge Rentoul said that did not matter. Williams further said that he ordered the advertisements to be inserted in colours. That had not been carried out with some of the advertisements. Plaintiffs said they made the defendant an allowance of 10s. in respect of that on the next advertisement. Judge Rentoul said he could quite understand that an advertisement in colours in say the *Daily Telegraph* would be worth 40 times more than in black. In the end he found for the plaintiffs for £6 and costs.

THE MEANEST MAN.—The meanest man has been located, says *Geyer's Stationer*. He went into a stationery store and asked the proprietor for a cheap note-book. The small package was made up and the price, a nickel, handed to the merchant, when the customer asked if the purchase could be sent to his home. The merchant assented, and calling a boy, handed him the parcel and a dime, saying, "Here, sonny, take this parcel to Mr. Blank's house." "What!" exclaimed the customer, "are you going to give that boy a dime to take that parcel up?" "Why, certainly," said the merchant. "I would not think of asking him to go for nothing." "Well," said the meanest man, "if you would just give me my nickel back, I will take it up myself, and save five cents."

THE current issue of *International Theosophical Chronicle* gives the reader some excellent food for thought. Dr. Herbert Coryn (formerly of London and now resident at Point Loma, California) writes on "The Playground of the Mind," and shows how we live in our likes and dislikes. "Cheerless Theosophy," by a London Student, is the subject of a good article dealing with some adverse criticisms on Theosophy, by the Rev. Dr. Horton, and in the section devoted to the "Survey of the movement," there are records of press notices and of a special interview with Mrs. Katherine Tingley, just after her return to the United States from the extensive tour she has recently made in Europe in the cause of International Peace. Further records of the activities at the International Theosophical Peace Congress at Visingsö are published, and numerous fine half-tone illustrations bearing on the Theosophical work combine to make a very enjoyable number.

Lithographic Three-Colour Process.

According to a German technical paper, an artist lithographer in Munich has been successful in making a three-colour printing process direct from stone quite practicable for large editions. This he has done by means of special retouching methods on the half-tone prints, making the screen points weaker or stronger as desired. He makes three or four colour plates in a photo-mechanical way by means of fundamental positive and negative retouching, and the high lights are quite blocked out during the exposure of the plates. The prints can be made direct from the screen negative on to stone if a suitable whirler for coating the stone, and the necessary printing frame are available. If such apparatus are not at hand the print must be made on aluminum, and retransferred to stone. The stone may be of the blue or gray variety, according to the hardness desired. If local correction or strengthening is necessary, the stone is etched slightly into relief, and by this means the clean printing of the stone is ensured as the ink will not attach itself between the dots. For this reason also the printing may be done on any kind of paper. Then three or four colour stones thus prepared with the screen or grain prints will yield just as long editions as the colour stones prepared hitherto by the chromo-lithographer.

Indian Paper Trade.

Mr. William Raitt, F.C.S., the cellulose expert, attached to the Forest Research Institute, Dehra Dun, in one of his recent official reports to the Government of India, deals with the problem referred to as follows:—

"The local mills have long since reached the limits of economic radius from which they can draw supplies in the raw state, a state which means freight and handling charges on 2½ tons of raw material for each ton of product, and rather than extend their radius further it suits them to import European wood pulp to the amount of 8,000 tons per annum at a high cost for freight. To put the Indian paper industry on a satisfactory basis, its system must be revolutionised on similar lines to the change of methods which has taken place in Europe, *i.e.*, the raw material must be partly manufactured at or near the source of supply and the 50 to 60 per cent. of waste there got rid of. Besides the present local demand and the large expansion of it which may be expected as soon as our paper mills are in a position to undertake it, there is a rapidly growing market in China and Japan which may be tapped, and which is represented by a present annual import of 30,000 tons of European wood pulp, and on which there is, to pulp manufactured in India, what amounts to practically a bonus of Rs. 15 per ton in difference of freight. Further, in view of the admitted increasing scarcity of spruce wood, and the gradually increased cost of wood pulp, it does not appear to be beyond the bounds of possibility to see an export trade to Europe develop."

The Worker and his Wages.

Theoretically, every workman is supposed to give all that he is capable of doing, but in reality no employee works his full capacity without extra inducement. Honest, conscientious men endeavour to earn their pay, but do not feel it incumbent upon them to give more than value received. In fiction the hero steams ahead at full pressure all the time, and the employer recognises his work by voluntarily increasing his pay, but in real life the pay envelope is fattened generally only when the employee receives a better offer elsewhere, save in institutions where there is a regular scale of advancement regulated by term of service.

The average employee has no interest in the firm farther than his pay envelope, and all the "get-together" lectures and "pull for the shop" slogans will enthuse him in a general way only unless he gets a substantial return from the profits he helps to swell.

High wages generally mean low cost of production, and nothing spurs like a bonus for good work. This truth employers should not forget.

If most men have something extra to work for, many time-saving short cuts will suggest themselves, and they will use their heads trying to think up new ways of doing the thing quicker and better.

When employees begin to use their heads, when they cease to work mechanically along certain lines because "we always done it that way," they become more valuable, both to their employers and to themselves. Brain cells, like muscles, grow through exercise, but they need an impetus to give them a start.—*Harris Monthly*.

Offset Book Printing.

Our American contemporary, the *National Lithographer*, says:—"We have received a specimen of book work done by the offset process that is well worth noticing. We have maintained for a long time that really fine book work, with illustrations, could be printed to advantage by the rubber blanket process. Now we have a fine specimen that comes fully up to our expectations. It is called 'Random Notes of Boston,' and is a cloth bound volume of about 100 pages, size 6½ by 10 inches, by Henry P. Dowst; drawings by John Albert Seaford. The offset press-work was done by the Providence Lithograph Co., and the publisher is the H. B. Humphrey Co., of Boston. The paper used is Strathmore Japan Antique, a paper that it would be folly to undertake to use if the fine sketches that the book contains were to be printed on a type press. As it is the rough paper and highlight half tones, printed in tint, make a very fine combination and the entire work is an elegant production." This is another testimonial to the utility of the offset principle. The same journal reviews the announcement of the semi-annual meeting of the California State Hardware Association, lithographed upon a sheet of No. 00 sandpaper. Photolitho portraits of leading hardware dealers grace one of the cover papers—on the flinty side, which shows what the rubber offset press can successfully tackle in the way of printing surfaces.

TENDERS WANTED.

TO PRINTERS.

THE WANDSWORTH BOROUGH COUNCIL is prepared to receive TENDERS for PRINTING RATE BOOKS from 15th January next.

Form of tender and specification may be obtained, and form of contract seen at these offices between the hours of ten a.m. and four p.m. (Saturdays ten till one).

Contractors will be required in the case of all workmen employed by them in and about the execution of the contract to pay wages at not less, and observe hours of labour not greater than the rates and hours recognised by the associations of employers and employees, and in practice obtained in the district where the work is to be executed, and to pay all carmen a wage of not less than 4s. 6d. per day. The contract will contain a general strike clause. Tenders, each enclosed in a separate envelope, sealed and endorsed "Tender for Printing Rate Books," are to be delivered at the Council House, East Hill, Wandsworth, S.W., and may be placed by the person tendering in the tender box provided for the purpose not later than ten o'clock in the forenoon of Thursday, 11th December next. No tender will be received unless it is made upon one of the printed forms issued for the purpose from these offices. The Council does not bind itself to accept the lowest or any tender.

D. A. NICHOLL,
Town Clerk.

Council House, Wandsworth, S.W.
27th *November*, 1913. 14243

PATENTS FOR SALE OR LICENSE.

THE Proprietor of Patent No. 29,386 of 1909, for "Improvements in and relating to Duplicating Books and Blocks," is desirous of entering into arrangements, by way of License and otherwise, on reasonable terms, for the purpose of exploiting the same and ensuring its full development and practical working in this country.—All communications to: HASELTINE, LAKE AND CO., Chartered Patent Agents and Consulting Engineers, 28, Southampton-buildings, Chancery-lane, London, W.C. 14240

THE Proprietor of the Patent No. 18776 of 1907 for "IMPROVEMENTS IN AND RELATING TO COST ACCOUNTING SYSTEMS," is desirous of entering into arrangements by way of license and otherwise on reasonable terms for the purpose of exploiting the same and ensuring its full development and practical working in this country. All communications to:—HASELTINE, LAKE AND CO., Chartered Patent Agents and Consulting Engineers, 28, Southampton Buildings, Chancery Lane, London, W.C. 14247

THE Proprietors of British Patent No. 27,058, of 1906, relating to "Improvements in Paper Folding Machines," desire to enter into negotiations with one or more firms in Great Britain for the sale of the Patent rights, or for the grant of licenses to manufacture under royalty. Enquiries to be addressed to D. YOUNG AND CO., Patent Agents, 11 and 12, Southampton Buildings, London, W.C. 14232

The Board of Trade and Labour.

THE present labour unrest was made the subject of notice the other day by Mr. Sydney Buxton, the President of the Board of Trade, who said, in the course of a speech to the members of the Institute of Directors, that it was the duty of companies and firms engaged in business to endeavour to improve, so far as they could. the relations between themselves and those whom they employed, and it was also their duty to go to the root of these things. In regard to the position of the Board of Trade itself, it had been his policy throughout the time that he had been in the Department to allow disputes when they arose to be settled locally between the parties themselves whenever possible. If they could not be so settled, and if the intervention of the Board of Trade—which was always at the disposal of parties if they desired—was required, that intervention should be through the Industrial Department of the Board, and should not be through any Executive Government action. Occasionally, of course, a dispute developed to such an extent that members of the Government were brought in, but he for one thought—and his colleagues of the Government agreed with him—that so far as possible Government intervention, unless absolutely essential, should only be the last resort, and should never be brought in at an early stage, and always be avoided if possible. Whenever, a dispute of any magnitude arose the Press, which represented the public, at once clamoured for Government intervention, but as soon as the Government had intervened, whether the strike was ended or not, they were abused for having done so. They were told, he continued, that this country and its traders and manufacturers were losing their grip, but he did not believe it. He thought that the enterprise of this country had never been greater or stronger than at the present moment.

* * *

Scientific Buying and Selling.

THE British have often been taunted by continental peoples as being "a nation of shopkeepers," and yet, after centuries of practice in buying and selling, it appears that we do not even know the rudiments of the science. At least that is what the average man in the street would imagine after listening to the speeches at a meeting held on Monday evening at the Kingsway Hall, under the auspices of the International Correspondence Schools, at which Lord Desborough presided. The chairman was good enough to say that the work of English men and women was in regard to brain and muscle superior to the production of any other country, and the idea of the correspondence schools was, with the help of commercial firms, to provide classes for instruction, the object of which was to bring to those who wanted commodities the knowledge of where to get them. The idea of the advisory committee was to take counsel with producers for removing difficulties in the way of making their wares known to consumers. Mr. Thomas Russell, the President of the Incorporated Society of Advertisement Consultants, also spoke, and said that efficient marketing reduced the expense of selling goods, and one of the most useful elements of it was honest and well-managed advertising. The new salesmanship and modern advertising offered great attractions as a career, because the man whose work resulted in an increase of business was naturally most valued and the best paid. Initiative, industry, and a native talent for business would find their reward sooner in the work of advertising and selling than in any other part of an ordinary business career. He was strong on the testing of the various modes of advertising by scientific devices, and instanced elaborate experiments that he had himself conducted to ascertain for a firm of billposters what combination of colours was legible over the greatest range of distance, and how difficulties were removed and waste prevented. The movement is supported by several leading gentlemen, and among those who have agreed to become members of the advisory council are Sir Frank Newnes, Sir William Treloar, Sir Joseph Lyons, Sir George Riddell, Mr. J. Murray Allison, Mr. John Hassall, and Mr. H. Simonis. It is to be hoped that the promoters may be successful in their scientific methods, but old-fashioned people might have something to say about the law of supply and demand.

* * *

American Imports and Exports of Newsprint.

THE American imports of printing paper for books and newspapers during September totalled $907,444, compared with $433,037 for the corresponding month in 1912, and for the nine months ended September $6,041,314, an increase of $3,789,129 over the first nine months of last year. The exports of newsprint alone are valued at $149,056, an increase of $10,845 over September, 1912, and for the nine months $1,635,687, as against $2,006,962 for the corresponding period in 1912—a reduction of $371,275. "All other" exports of printing paper are returned as follows:—September $109,528, compared with $128,044 in September, 1912; January September $1,203,622, an increase of $164,358. The supply of paper from Canada to America more than doubled during September.

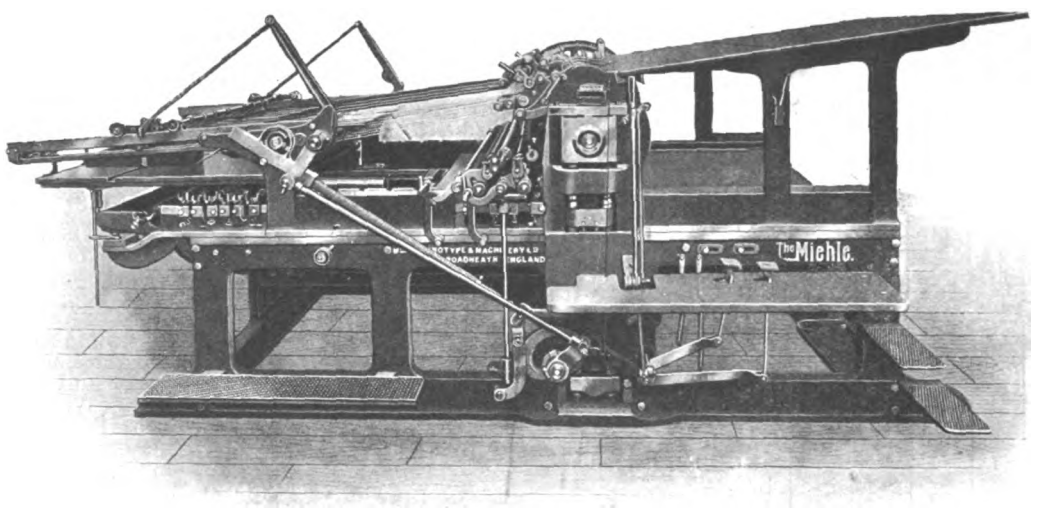
The Scottish Bookbinders' Strike.

At a meeting of the Glasgow Master Bookbinders, held last week, Mr. Campbell stated the men's union saw no object in discussing the present position at the proposed conference unless the reason of the strike was discussed also. It will be recalled that the men have struck to obtain certain demands contained in a memorial presented to the employers last April. Consideration of this memorial has been excluded from the scope of the proposed conference by the express terms of the letter from the Masters' Alliance to the men's Federation agreeing to the request for a conference. At the conclusion of the meeting it was announced that the employers had passed unanimously a resolution adhering to the position they had taken up previously. It was also reported that several men had returned to work. The conference alluded to was held this week at the Central Station Hotel, Glasgow. The delegates from the Printing and Kindred Trades Federation meeting the Scottish District Council of the Bookbinders' Union, and Mr. James Kelly, general secretary of the National Union of Bookbinders and Machine Rulers, attending the conference as a delegate from the Federation.

On Tuesday, the representatives of masters and men met in conference in the Central Station Hotel, Glasgow, to consider the situation. The representation of the Scottish Alliance of Masters in the Printing and Allied Trades, who are conducting the case for the masters, was headed by Mr. James MacLehose, chairman, and Mr. Bisset, secretary, also attended. The men's representatives included delegates from Glasgow, Edinburgh, and Aberdeen. The Glasgow representatives were Messrs. Alex. Dempster, Archd. Duncan, and John Clarke. Mr. A. E. Holmes, secretary of the Printing Trades' Federation, and Mr. Jas. Kelly, of the Bookbinders' Union, were present, and Mr. John White, of the Scottisn Typographical Society, and Mr. Thomas Stroat, Lithographers' Society, also attended. The parties met separately prior to conferring together.

After deliberating for nearly two hours the parties separated, and considered the position in their respective rooms. No indication was given to the Press as to the progress, if any, that had been made towards a settlement, and at the time of going to press we have not received the result of the deliberations.

The London Strike



is still going on, and we have nothing this week to record respecting it, both sides, as yet, seemingly being as determined as ever to fight to a finish, although it is stated that Messrs. Burns have now nearly 350 workers on the pay-roll.

THE late Mr. J. Ferguson, formerly editor and principal proprietor of the *Ceylon Observer*, has left estate of the value of £30,949.

The Miehle

TRADE MARK

IS PRODUCING THE FINEST COLOUR, BOOK, AND JOBBING PRINTING THROUGHOUT THE UNITED KINGDOM AND COLONIES.

In half-tone work, the Miehle reproduces every gradation of tone contained in the blocks—from soft high-lights to heavy solids.

Its reputation for perfect colour printing (which includes efficient rolling power and the features which make for dead register) is embraced by the standard phrase "Miehle Quality," which means essentially Miehle printing.

The Miehle is fitted with two deliveries, which at will deliver the product printed side up or printed side down.

The inking equipment provided on this press consists of sixteen rollers and a large ink table; of these, four are forme rollers with reciprocating riders and rollers over them (nine in all, arranged in pyramid form). The other seven rollers distribute the ink on the table before it reaches the forme rollers.

This press is built in six sizes; the smallest size takes a sheet up to 26-in. by 39½-in. and the largest size 46-in. by 66-in.

Miehle presses are also supplied in tandem, so arranged that the units may be disconnected and used as single machines.

The Miehle is Manufactured and Sold by

LINOTYPE AND MACHINERY LIMITED

who have the sole and exclusive right to manufacture and sell The Miehle in the United Kingdom and Colonies (except Canada).

Financial.

Offices of the *British and Colonial Printer and Stationer*,
58, SHOE LANE, LONDON, E.C.
WEDNESDAY, Dec. 3rd, 1913.

THE active demand in the money market continued down to Friday last, since when it has lessened and conditions have been easier, supplies being ample for requirements. Some £600,000 was on offer in the open market yesterday, and there being no outside demand, probably the Bank of England will secure the bulk of it. Bullion movements for the week have resulted to date in a net influx of £924,000, the bulk of which represents bought bar gold. The undertone of stock markets has not been unsatisfactory on the whole, but business has been small and price movements irregular. Consols are under the influence of forthcoming loans and have lost the ground they gained last week. The quotations are 72⅛ to 72¼ for money, and 72 7/8 to 72 3/8 for the account.

The miscellaneous industrial market has been dull, with business on a restricted scale. In the section relating to paper and print movements have occurred both ways. Rises have taken place in Cassell and Co. of ¼, and in Raphael Tuck and Sons Pref. of ⅛, whilst there have been falls in Causton and Sons Pref. of ¼; in Ilford Ord. of 1/16; in Spicer Bros. Pref. of ¼, and in Waterlow and Sons Def. Ord. of ½. Business has been done during the past seven days in Associated Newspaper Pref. at 20s. 7½d.; in Cassell and Co. at 5¼, 5¼, 5⅜, 5⅝ and 5 11/32; in *Country Life* Pref. at acc. 17s.; in John Dickinson and Co. at 99 in both the Cum. Pref. and the 2nd Pref.; in *Illustrated London News* and *Sketch* Pref. at 13s .and 13s. 3d.; in International Linotype at acc. 73⅛, 72⅛ and 72⅛; in Linotype and Machinery A Deb. at acc. 58½ and 57, and in the B Deb. at acc. 42; in Edward Lloyd Pref. at 22s. 6d.; in George Newnes Pref. at acc. 16s. 6d. and 16s.; in Raphael Tuck and Sons Pref. at 5 3/32; in Waterlow and Sons Def. Ord. at 30; and in Weldons Ord. at acc. 30s. 7½d., 31s. 6d., 31s. 3d., 31s. 10½d. and 31s. 9d., and in the Pref. at acc. 20s.

DIVIDENDS AND REPORTS.

THE directors of the Printing Machinery Co., Ltd., in their report for the year ended June 30th, state that dividends at the rate of 7½ per cent. per annum on the ordinary shares and 5 per cent. per annum on the preference shares have already been paid to the shareholders, and beyond the sum required to meet these dividends the company has not received any surplus from Linotype and Machinery, Ltd.

EYRE AND SPOTTISWOODE.—The accounts for the year to March 31st last, after providing £1,200 for debenture stock sinking fund, and writing off £1,000 from the cost of issue of mortgage debenture stock and including £556 brought forward, show an available balance of £23,572. Out of this sum dividends on the preference shares at 2½ per cent. were paid on March 7th and July 31st, 1913, absorbing £12,500, and £10,282 has been set aside for depreciation of plant, type, fittings, etc., leaving £790 to be carried forward.

NEW COMPANIES.

B. M. C. PROCESS, LTD.—Registered on November 21st, with a capital of £1,100, in 2s. shares, to carry on the business of fine art dealers, artists, print dealers, publishers, lithographers, engravers, printers, etc. The subscribers are A. W. Forsaith and W. Wade. Private company. Table "A" mainly applies. A. W. Forsaith is the first secretary.

PATHE CINEMA JOURNAL CO., LTD.—Registered on November 27th, with a capital of £250, in £1 shares, to take over the business of the *Pathe Cinema Journal*. The subscribers are J. L. Solenne, A. Werkmeister and H. L. Lablache. Private company. The first directors are J. L. Solenne, A. Werkmeister and H. L. Lablache.

ILLUMINATED POSTERS, LTD.—Registered on November 27th, with a capital of £1,000, in £1 shares, to carry on the business of advertising contractors and agents, etc. The subscribers are C. A. Cohen and T. E. Godbold. Private company. The number of directors is not to be less than two nor more than five; the subscribers are to appoint the first.

COMPANY NOTICES.

MIDHURST PUBLISHING CO., Ltd.

Notice is given, that a meeting of the company will be held at Petersfield, Hants, on December 29th, to receive the report of the liquidator, showing how the winding-up of the company has been conducted and its property disposed of, to hear any explanation that may be furnished by the liquidator.

UNIVERSAL TYPECASTER (Parent) CO., Ltd.

Notice is given, that a meeting of the company will be held at 26, Shaftesbury-avenue, W., on December 27th, for the purpose of having an account laid before them by the liquidator, showing the manner in which the winding-up of the company has been conducted, and of hearing any explanation which may be given by the liquidator.

AUTOMATIC ADVERTISING CO., Ltd.

At a meeting of the company, held at London, on November 10th, the following resolution was duly passed:—"That the company cannot, by reason of its liabilities, continue its business, and that it is advisable to wind up, and that Mr. Robert J. Blackadder, of 28, Norfolk-street, Strand, W.C., be appointed liquidator for the purposes of such winding-up."

MILLINERY TRADE PRESS, Ltd.

At a meeting of the company, held at London, on October 23rd, the following resolutions were passed; and at a subsequent meeting, on November 10th, were duly confirmed, viz.:—"That the Millinery Trade Press, Ltd., be wound up voluntarily."—"That Mr. Berkeley W. Nelson, F.S.I.A.A., of 19, Southampton-street, W.C., is hereby appointed the liquidator to conduct the winding up."

WORLD'S WORK, Ltd.

At a meeting of the World's Work, Ltd., held at London, on November 7th, the subjoined resolution was passed; and at a subsequent meeting on November 24th was duly confirmed:—"That the company be wound up voluntarily, and that Mr. John W. Heinemann, of 20, Bedford-street, Strand, W.C., be appointed liquidator for the purposes of such winding-up without remuneration." Notice is given, that a meeting of the creditors of the company will be held at 20, Bedford-street, W.C., on December 10th.

COMMERCIAL INTELLIGENCE.

Re JOHN ARTHUR BAILEY. "The Pepper Box."

At the London Bankruptcy Court, recently, before Mr. E. Leadam Hough, senior official receiver, the first meeting of creditors was held under the failure of this debtor, described as of 205, High Holborn, W.C. After dealing with the proofs of debt lodged, the official receiver stated that debtor had informed him that in June, 1909, a gentleman approached him with a proposal that he should provide money with which to start a new weekly publication to be called the *Pepper Box*. He was given to understand that a sum of £500 would be ample to carry the thing through. Upon that assumption debtor persuaded his father to find £700 for the purposes of the paper. Offices were taken at 67, Long-acre, W.C. The first edition of the paper was issued about three weeks afterwards, and about six weeks after the business commenced the whole of the £700 had been absorbed. It was represented to debtor that the paper had had an unusual run of bad luck, and further capital was wanted. Debtor saw his father again and got him to consent to put another £1,000 into the concern, but that amount was also expended prior to the formation of the company. In November or December, 1909, a company was formed and registered under the style of "Weekly Publications, Ltd.," with offices at 67, Long-acre, W.C., and a nominal capital of £20,000, in £1 shares. Debtor was appointed a director of the company, but still the *Pepper Box* did not pay, and he obtained from his father further sums amounting in the aggregate to £3,000. In March, 1910, the company went into voluntary liquidation, Mr. Randall being appointed liquidator, and the paper ceased publication. In January, 1910, he signed a document which he afterwards found to be a guarantee for certain of the company's debts. Under that guarantee three creditors had obtained judgment against him, and he had filed his petition in bankruptcy in order to put an end to his liability. He had no other liabilities beyond those guarantees. He held a certificate for 5,000 shares in the company, but they were of no value. He returned his liabilities at £1,064, and the assets consisted of the £5,000 worth of shares he had referred to. He alleged his failure to have been caused through the guarantee given by him on behalf of the company (Weekly Publications, Ltd.), and to the failure of the company. The estate was left in the hands of the official receiver for summary administration in the usual manner.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIPS DISSOLVED.

LANE, G. W., and WOODS, J. E., lately trading as Lane's Library and Printing Works, at 65, Preston-street, Faversham, Kent, stationers, printers, booksellers and newsagents. Debts by G. W. Lane. November 3rd.

CARR, J. T., and LIGHT, A. E., trading as Carr and Light, 107, Leeds-road, Bradford, newsagents, etc. Debts by J. T. Carr. November 27th.

BARNETT AND GILLESPY, Alfreton-road, Nottingham, advertising contractors. Debts by R. Barnett, who will continue to carry on the business. November 11th.

DISTRIBUTION OF ASSETS.

IN THE MATTER OF A DEED OF ASSIGNMENT for the benefit of creditors, dated June 11th, 1908, and executed by T. A. Ward, 16, Bath-street, Ilkeston, Derby, stationer, etc. Claims by December 20th to A. C. W. Rogers, C.A., Milton Chambers, Milton-street, Nottingham, the Trustee.

THE BANKRUPTCY ACTS, 1883 AND 1890. RECEIVING ORDERS.

NASH, H., Granville Stores, High-street, Minster, Kent, newsagent, etc. Date of order and of adjudication order, November 24th, made on the debtor's own petition. First meeting of creditors, December 10th, 11 a.m., at the Official Receiver's office, 68a, Castle-street, Canterbury. Public examination of debtor, January 3rd, 10 a.m., at the Guildhall, Canterbury.

KIMBER, W. E., Hampden House, Phœnix-street, Somers Town, London, printing machinery agent. Date of order and of adjudication order November 27th, made on the debtor's own petition. First meeting of creditors, December 11th, noon, and public examination of debtor, January 30th, 11.30 a.m., both at Bankruptcy-buildings, Carey-street, W.C.

ADJUDICATION.

VICK, H., ASHWORTH, A. and F., and PEARCE, W., trading as Vick, Ashworth and Co., at Dean-road, Salford, and 28, Kennedy-street, Manchester, general printers. Date of order, November 17th. It was ordered that the receiving order, made on September 26th, be discharged so far as it relates to L. Ingram.

NOTICE OF INTENDED DIVIDEND.

EVANS, E., 31, Coleherne-road, Earl's Court, London, S.W., journalist. Claims by December 17th to E. L. Hough, official receiver, Bankruptcy-buildings, Carey-street, W.C.

NOTICE OF RELEASE OF TRUSTEE.

TERRY, F. H., 6, Cannon-street, Hull, newsagent, etc. Trustee, G. H. Acheson, official receiver, York City Bank Chambers, Lowgate, Hull. Released November 17th.

BOOKBINDERS, as a rule, are generally careless in the handling of material. Leather, cloth, canvas, art papers, etc., are left unwrapped and uncared for. When needed the light and air have discoloured edges and open sheets, causing much waste. The efficient binder is careful of his material.

The Future of the P. M. and O. A.

SIR,—In your last issue appears a letter under the above heading, from one of our old members, Mr. Thos. Shaw, a gentleman who has in various ways rendered many services to the Association, and whose opinions, therefore, are entitled to be received with respect. I question, however, whether the matter he so strongly advocates is a proper one to discuss in the public Press, the domestic affairs of the Association being for the consideration of members only; and, further, Mr. Shaw's views upon a National Council have already been discussed in London and elsewhere, and, so far as my knowledge goes, even the Provincial Centres are not all in favour of the establishment of such a body.

I am, Sir, Yours, etc.,
E. C. MOYCE,
General Secretary.

November 29th, 1913.

A Disclaimer.

SIR,—Will you permit me to explain that the Employers' Parliamentary Association, which has its headquarters in Manchester, and of which Sir Charles W. Macara is the president, has no connection whatever with the body known as the Employers' Parliamentary Council, London, which has issued a statement on the case for the amendment of the Trade Disputes Act of 1906, and against "labour union conspiracy."

The Employers' Parliamentary Association was inaugurated two years ago to deal with National Insurance in the first instance. It is entirely non-political, and is organised on a thoroughly representative basis, its main object being to ensure that the men controlling the industries of the country shall be consulted with regard to all legislation affecting industry. The Association has no antagonistic feeling towards trade unionism, indeed, it recognises that the workers have quite as much right as the employers to combine for the defence of their interests. The statutes do not permit of the Association taking any part in disputes between capital and labour.

The Employers' Parliamentary Association has already assumed large dimensions, includes in its membership many great firms in special industries and thirty federations and associations of employers, and it hopes to co-operate in the future, as it has done in the past, with the Parliamentary Committees of the employers' federations controlling the staple industries in dealing with legislative measures affecting industry generally.

I am, etc.,
J. HAWORTH, *Secretary.*

15, Cross-street, Manchester,
Nov. 29th, 1913.

The English Language in India.

SIR,—I am here editing a daily evening paper, published in the native language—the Gujarati, which is one of the principal languages of the Bombay Presidency, a language spoken at least by eight millions of people, consisting of Hindoos, Mahomedans, and Parsis. Just as the question of an international language is occupying the attention of the scholars of the West, who, I regret, seldom take into consideration the millions inhabiting the East, so too a universal language for India has been discussed here these last two decades. In India there are so many languages and dialects (I think there are about 300) that a native of Bombay Presidency, speaking either Gujarati, the Marathi or the Urdu (three principal languages) is hardly able to converse with a Madrasi, Telangu, Bengali or Sindhi, who are living say only 400, 500 or 300 miles from his native place. I should think there is no country where the need for a common language and common script is so urgent as in India. For commercial, industrial, social and political intercourse, the advantages of a common tongue will be far more greater in India than in Europe. Public opinion is in favour of such a language, but we have been unable to adopt one language for the whole country, because claims of rival languages are so many and difficulties are so varied that I do not think this problem will ever be solved. Just as the French is spoken more or less all over Europe, Hindi is spoken or understood over many parts of India, and if there is any chance Hindi might become the common language, but the difficulty comes in the way of the script. If 60 out of 100 persons can speak and understand Hindi, only six know how to write it. I am one of those who do not favour any of the Indian languages being adopted for a common purpose. I have always advocated in my paper that if there is any language that will be and should be the universal language for India, it is *the English language;* the language of our ruling class, the language of the official world, the language of the courts, the language of British Parliament, to which we Indians look as the highest tribunal for redress of India's grievances. In spite of its inherent difficulties the English language is spoken and written by thousands of Indians as ably and efficiently as any English-born scholar. Indians have shown a remarkable aptitude for learning the English language and its precious treasures of literature, English language has a great future in India, and when our benign British Government makes mass education *free* and *compulsory*, millions of numbers will be added to the 150 millions (reckoning white men alone) that are now speaking this remarkable language. My object of writing these few facts is that you should include India and its people in the movement for the reform of English spelling, and you will be rendering yeoman service to the cause of dumb humanity of this vast country, if you will help them in their efforts to spread English education in the land.

Yours faithfully,
(Sgd.) SORAB P. KAPADIA.
Bombay.

[We insert the above letter at the request of the Simplified Spelling Society.—ED.]

THE Royal School of Typography, though of quite recent foundation, is setting to work energetically to fill a useful place in the industry with which it is connected. It has lately begun the publication of an illustrated Dictionary of the Graphic Arts (under the editorship of Sig. G. I. Arneudo), having special regard to typography,* which is being issued in parts, each containing about 75–100 pages, 8 by 5½ inches. It is anticipated that the entire work will cover about 1,200 pages, and be completed some time in 1915. The publishing price will be 11s. 3d., but a discount of 1s. 6d. is given to those who subscribe in advance. The arrangement adopted is alphabetical, thus facilitating easy reference, and the matter is neatly printed within red border lines. We have no doubt that the work will be of considerable value to Italian printers, and it should also be of interest to all those in other countries who have to do with members of the Italian printing trade.

GUIDA DEL MUSEO DEL LIBRO, CON INDICE BIBLIOGRAFICO DEI FACSIMILI DEGLI INCUNABOLI.

The Turin Exhibition of 1911 was the means of bringing together a very extensive and representative collection of photographic reproductions from Italian incunabula, or books printed before 1500, and many of interest that were produced shortly after that date. In addition, there was a quantity of other material relating to the history of the graphic arts trades in Italy, and it was felt, when the Exhibition closed, that it would be a worthy enterprise to permanently retain as much of this as possible, in the original location—*i.e.*, the "Mediæval Castle" which formed so interesting a feature of the Exhibition—and to found for its reception and future preservation a "Museum of the Book." The Executive Commission of the Exhibition therefore handed over the building to the Municipality of Turin, together with the collection of facsimiles referred to, and at the same time Sig. G. B. Miliani, the well known Italian manufacturer of hand-made paper, presented the model fourteenth century paper mill that he had in operation there. There was thus an excellent nucleus for the formation of such a museum as that in contemplation, and accordingly the Municipality decided to frame a constitution for it, which has since been done and the institution opened to the public. The work now under notice is nominally a Guide to the Museum, but this descriptive portion only occupies a dozen preliminary pages, the rest of the volume (163 pages) comprising a triple index to the collection of facsimiles from Italian incunabula; which consists of no less than 538 items, and illustrates in one form or another practically every phase of early Italian typography, during the first half-century of its existence. The arrangement is alphabetical: first in order of authors' names, then in order of names of places at which the books were produced, with a sub-list of printers' names under each (a few facsimiles from early Mayence-printed works are included) and finally a list of the names of the printers whose work is represented in the collection. References to Hains Copinger and other authorities on the subject, also to public libraries or other institution, where the copies from which the facsimiles were taken are to be found, adds much to the utility and interest of the book to all students of the early history of typography. The work has been nicely printed on deckle-edge paper at the Royal School of Typography at Turin, and the Commissioners of the Museum—of whom the Syndic of Turin is Hon. President, and Cav. G. Vigliardi-Paravia Acting President—are to be congratulated upon it.

*Dizionairo esegetico Tecnico e Storico per le Arti Grafiche

Sale of Printing Plant.

Messrs. Walter Phelps and Son, auctioneers, of Birmingham, offered for sale, last week, by direction of the debenture holder, the printing plant and machinery of the *Hampshire Post*, which comprised a very fine 4-deck Goss rotary press, and other plant which had been installed for the production of the *Wessex Press*, a daily evening newspaper brought out a year or so ago to compete with the *Evening News*, but which only ran for a few months. The whole of the plant, valued at some £24,000, together with the copyright and goodwill of the *Hampshire Post*, was first offered in one lot, but no bid resulting the auctioneer proceeded to submit it in some 1,200 lots. The copyright of the *Post* was knocked down to a local buyer at 500 gs., and it is understood arrangements have been made for a continuance of publication without interruption. Prices obtained for machinery included demy colour press £10, standing press £9, 44-in. self-clamp Elliott guillotine £47, double royal Wharfedale, by Payne, £175, royal nearly new ditto £110, steam wire stitcher £23 10s., cap folio Jardine platen £14, demy art Caxton platen £80, a double royal Wharfedale £52 10s., double royal self-inking proof press £36, new quad demy Miehle (cost £650) £540, old quad demy two-feeder Wharfedale £40, 4-h.p. Otto gas engine £26, lino metal £18 10s. to £20 a ton, stereo ditto £17; seven Linotypes, new "Model 4" double-letter machine No. 6,603, £575, duplex double-letter ditto, No. 5,601, £370, duplex machine, No. 4,645, £340, ditto No. 3,871, £220, duplex pica machine, No. 106, £175, duplex machine, No. 3,812, £210, a Simplex machine (some 20 years' in use), £100. Intense interest was displayed when the rotary was put up, described as a "four-decker Goss newspaper straight-line perfecting press," with every available improvement up to the date of construction about a couple of years ago, and producing 48,000 4, 6, or 8-page papers an hour. There are not many newspaper firms who are ready to buy such a machine at short notice, even if the size of sheet it prints is suitable, and the bidding was extremely slow. The fine machine was eventually knocked down to Mr. Thomson, of the *Dundee Courier*, at £1,125.—For the foregoing information we are indebted to the *Isle of Wight County Press*.

ACCORDING to *Kemp's Mercantile Gazette* there were no failures in the printing and stationery trades of England and Wales for the week ending Friday, November 28th; the corresponding week in 1912 showed six.

NATIONAL HEALTH INSURANCE. — The National Health Insurance Commission (England) have issued a Provisional Order excepting from compulsory health insurance the two following classes of outworkers:—

1. Persons to whom articles or materials are given out, but who are not themselves substantially engaged in the actual manipulation of those articles or materials.

2. Persons to whom articles or materials are given out, not being articles or materials which it is the trade or business of the person by whom they are given out to manufacture, make up, clean, wash, alter, ornament, finish, or repair, or adapt for sale.

The effect of the first exception is to exclude contractors or middlemen, who supervise the work but are not themselves substantially engaged in the actual manipulation of the articles or materials given out to them. Contractors or middlemen who are substantially engaged in working on or manipulating the articles or materials given out are not excepted. The effect of the second exception is to exclude persons to whom tradesmen or business firms give out work of a kind which it is not the trade or business of the tradesman or firm to perform. For example, the employment of a person to whom a firm of solicitors give out the dusters used for office purposes to be washed or repaired would be covered by the terms of the exception.

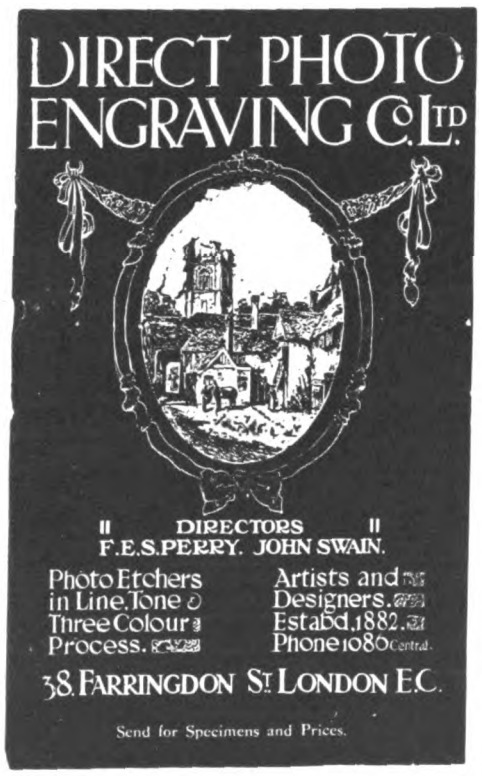
TO THE PRINTER.

When you are in the market for engravings of Maps, Charts, Diagrams, Colour Plates, Fine Script, Copy Book and Educational Work for modern Text Books or Catalogues, come to the L.L. Poates Engraving Company for estimates.

We can take your rough copy, blue prints, white prints, pencil sketches and reference letters, outlines, descriptive matter can be written on copy with pencil, and we, with our force of skilled engravers, work up the plate to perfection, giving you all the nicety of detail which is necessary in this class of work.

"We will send Specimen Illustrations of Poates Wax Engraving Superiority" on request.



Yours for "SERVICE,"

L.L. POATES ENGRAVING COMPANY,
22-24, North William Street,
New York, N.Y.

For the history of the Wax Process of Engraving and reproduction of the first plate made by this Process, we call your attention to the December "AMERICAN PRINTER"

Tariff Changes
AND
CUSTOMS REGULATIONS.

(From the "Board of Trade Journal.")

FRANCE.

It has been decided that boxes of corrugated cardboard (*carton ondulé*) constituting the exterior packing of certain products (particularly articles of glass) imported in complete car loads (*wagons complets*) may in future be regarded as packing without marketable value, and admitted free of duty or at the same rate as the contents, according as the latter are dutiable on the net weight or on the gross weight. In conformity with the provisions of Circular No. 4,191 of September 20th, 1911, cardboard boxes constituting the exterior packing of products imported otherwise than in complete car loads, and which, consequently, bear traces of usage, must also be regarded as without marketable value.

FINLAND.

Lithographic reproductions of photographs in cartons (cardboard covers?) are dutiable under 235 (5) of the Tariff, at the rate of about £3 10s. per cwt., but if loose, they are admitted free. Paper yarn is dutiable at the same rates as cotton yarn. Manufactures of lacquered or white sheet iron, with lines, figures or inscriptions printed or painted in one or more colours, are dutiable under 224 (2) of the Tariff at about 37·6 per cwt.

COMMONWEALTH OF AUSTRALIA.

It is announced that stencil paper, treated with glycerine, but not waxed, 24 by 4 in., is dutiable under 357 (B) of the Tariff at 30 per cent. *ad val.*, or if in sheets of mill size, at 20 per cent., a rebate of 5 per cent. being allowed in either case if the goods are of British origin.

Cellophane, gelatine foil, and similar material, provided security be given by the owner that it will be used for envelopes only, and that evidence of such use be given to the satisfaction of the collector within six months after delivery by the Customs, will in future be admitted free of duty.

The *Commonwealth Gazette* for October 11th last contains a Customs Notice, dated October 1st, stating that, in accordance with the provisions of Customs Regulation No. 103, drawback of duty may be allowed on the undermentioned imported material used in the manufacture of articles within the Commonwealth, upon the exportation therefrom of such manufactured articles:—

Pictures, printed on paper board, cut to size, with space for printing, used in the manufacture of calendars.

Provided that in each case, before drawback be allowed, the collector shall be absolutely satisfied that the drawback claimed shall be properly due, and may, if he thinks necessary, require the manufacture to take place under the supervision of an officer.

DENMARK.

So-called "spring backs," intended for use as spring or clasp covers for binding loose papers, consisting of a thick piece of stiff tissue, curved like the covers of a book, surrounded at intervals by a spring of oxidised steel plate, the edges of which are inserted in the cover by means of two narrow strips of tinplate, which run the whole length of the cover, the entire article being covered on the outside with canvas and paper, with black cotton tissue pasted on the inside, the latter being continued on each side for a few centimetres beyond the edges in order to fasten the binding, is dutiable under the heading "textile manufactures," the black cotton cloth being the most highly taxed material under No. 151 of the Tariff at the rate of about 2d. per lb.

Sir Frank Short on Engraving.

On Thursday evening last, in the Lecture Theatre of the South Kensington Museum, Sir Frank Short, R.A., the most eminent English authority on the subject, lectured on etching and engraving to a large and appreciative audience. The single hour allotted is of course far too short a time in which to deal with the points involved, in anything more than the merest outline, but Sir Frank succeeded in placing before his hearers a lucid and well-strung together account of some of the principal engraving processes—excluding of course photo-mechanical ones—and the leading etchers and engravers, ancient and modern, quietly passing over his own fine work with scarcely a word. His idea is that engraving for printing purposes took its rise somewhere in the Lower Rhine valley about the middle of the fifteenth century, and probably owed its inception to the practice of taking a "proof" from incised engraving on metal—armour and the like—for decorative purposes. The nature and operation of the copperplate printing press were fully described, as were different methods of engraving, line, mezzotint, stipple, and so on, with the aid of lantern slides, and the lecturer also put before his audience, by the same means, some of the finest work of Rembrandt and other great craftsmen. Aquatint came in for a very detailed description, illustrated by nearly a dozen slides showing the successive stages of biting and stopping-out by which the finished plate was produced.

Here and there, amongst the mass of historical data which Sir Frank Short had compiled, a few words were interpolated on his own opinions and experiences, and this was by no means the least interesting part of the lecture. On the subject of colour printing he was quite emphatic, and declared he had hardly ever come across a print of this kind that he really cared for, save those produced by the old water-colour process of block printing, *i.e.*, the Japanese method that is now undergoing a revival. Nor had he a good word to say on the subject of "states," that fetish which is so religiously worshipped by the print dealer, and through him by most collectors. "Proofs," in Sir Frank's opinion, should be simply impressions taken during the progress of a plate to completion, to see "how it is getting on," and subsequent to completion there should be only one "state." One of the items in the syllabus of the lecture was "Clear Printing and Smudge." The latter term, horrible to relate, was applied to the common trick of imperfectly wiping a plate before printing, in order to obtain a sort of tone from the offset of the light film of ink remaining on parts of the surface. Some plate printers, and not a few artists, are inclined to swear by this, but Sir Frank Short seems to have only tried it once, and promptly tore up the printed result! Some useful hints as to the care and preservation of prints brought a very interesting lecture to a close.

Next Thursday's lecture (December 11th) is to be by Mr. G. H. Palmer, on Early Printed Books.

GERMAN TRADE MARKS.—A new trade mark law is about to come into operation in Germany, of which the following are the main features:—Under the new law trade marks will be examined as to novelty, and, if accepted, will be open for public inspection after the manner of patent applications. The classification system in force in this country will be introduced. Whilst at present a single application is sufficient to cover all classes of goods, in future, in addition to the application fee, a supplementary fee will have to be paid in respect of each and every class in which the mark required is to be registered.

THE WORLD'S

Paper Trade Review

IS PUBLISHED EVERY FRIDAY AT

58, Shoe Lane, London.

In AMERICA

There is published only one weekly paper representative of the interests of employing printers. It is the most popular Printers' Paper read in that country:—

Because it is the Trade Business Journal.
Because it has a splendid news service, with twenty-two paid correspondents.
Because it deals with the practical always.
It is the only Paper which holds the attention of the man who owns the plant.

The PRINTING TRADE NEWS does not attempt to teach printers to set type, but it is the foremost authority on the latest efficiency methods, the organization activities, progress in cost system work, approved methods of printers' advertising and anything and everything that tends to make the printing business a pleasant and profitable one.

It is pre-eminently the trade journal English machine builders should use to make their product known in America.

We have good mechanics. Let us have good business men. Let the NEWS come to YOU every week. Europe $5.00 per year; Canada $3.00. 64 pages weekly.

The Costing Campaign.

Meeting at the Aldenham Institute.

A meeting was held the other evening at the Aldenham Institute, St. Pancras, Mr. G. Eaton Hart presiding. In opening the proceedings, Mr. Hart said:—We have met to-night to find a very important point of our industry, that is, to find the cost. That is a matter which has been in the minds of most of us all our lives, but it is only very recently that I have become associated with the new costing system; and I am here to-night probably presumptuously, because I am not fully familiar with the costing system, but am only a novitiate eager to learn like the rest of you. Naturally I have been interested in endeavouring to find costs during the whole of my printing life, from the time when I was a young student up to the point of managership. During the last few years there have been a good many conferences and discussions, and a good deal of thought has been given to the matter, and to-night we are to reap the benefit of all that. The late Mr. Fox who, I believe, spoke a good many times in this room, was an enthusiast on costs; up to a certain point he arrived at very much what the Costing Committee are arriving at now, only probably by a different method. In ascertaining the cost we do more than find out whether we are making money or not, we discover a good many other things. We discover where the waste is, because we check our expenditure in a new and scientific way. If we could universally adopt a costing system we should get unity amongst ourselves, and the prices at which we should sell our commodity to the customer would be as easy of regulation as that of loaves in a baker's shop. I think the printer is as much entitled to the fair, regular, even, established price for his commodity as the baker is. That is looking at the matter from the employer's side, the side of profit and loss. But there is another side which it would be improper for me not to refer to in a hall like this, where the youth of our trade is being taught; that is the side of instruction in our technical schools in this system of costing. I, myself, think, and have always thought, that the youth in the printing office does not have the opportunity—or at any rate he does not see or does not seize the opportunity—of making more of the counting-house side of the business. There is a great future in front of the young man who has sufficient commercial education in addition to high technical skill. There is a great future for this young man in the counting-house, either in this very system of costing, which above all things must have a practical head; or, something which is better in my opinion—those who possess both the technical and commercial knowledge of the costing system may become representatives of some of the biggest houses. You know they say that a representative is born not made; but I think that with a little effort the representative might be made out of the ordinary material which we find coming into the printing business. I will call upon Mr. Austen-Leigh to give his address. (Applause.)

Mr. Austen-Leigh.

Mr. Austen-Leigh said that he had been asked to speak on the general aspect of costing, and had very readily responded because it was not only a subject which had been considerably agitated during the last few years, but he believed it to be one of the most hopeful movements to be found in the trade to day. In old days, to which not many in the room could go back, there had been much less need for a costing system in the printing trade. Printers were not so numerous then, and in consequence good prices could be obtained. As competition increased prices fell lower and lower, while, in addition, the printer had to face a steady and natural increase of wages, shorter hours and whatever fresh burdens—such as Workmen's Compensation, the Insursance Act, or an increased Income Tax—it pleased the various governments of the day to place upon him. Naturally, in the end, a great many master printers had found their profits reduced to the very slenderest proportions. Such adversity had at least one good result—that it made us look into our methods as closely as possible and see whether it is not our own fault that we do not earn more.

That was happening in a good many other trades besides the printer's. Ten years ago, for example, railway directors had been forced to overhaul their methods, to put in a statistical department and find out exactly how much it cost to carry a ton a mile. By an Act of Parliament, which came into force during the present year, railway directors were now compelled to keep certain statistics; he only wished all printers were equally compelled by Act of Parliament to keep statistics showing the cost of a thousand ens or an hour's jobbing composition. In the case of railways, America, where the science of railway management was much more highly developed than over here, was not only lowering costs but was eliminating competition by working arrangements. He was not so foolish or so optimistic as to believe we should get rid of competition in the printing world, but he did say its intensity might be diminished with advantage to all. Further, he would say that excessive competition was very much the result of ignorance of costs, which led to the cutting of price already unremunerative. Brown would argue that if Smith could do a job for so much, he (Brown) could do it for ten per cent. less; but if he went into the cost he would more than likely find that Smith was already doing it at a loss. Another way in which ignorance of costs increased competition was by producing large variation in the amount of tenders. If most printers put in tenders for the same amount customers would be less likely to shop around for prices. Sometimes the variation in the amount of tenders was so extraordinary that they were published in the trade journals, but most master printers knew of instances where there had been a difference between two printers of 100 per cent. Of course it was possible to argue that one was a robber and the other a philanthropist, but it was a much more likely explanation that neither understood his costs. He was bound to say that if either was right the betting was on the man whose estimate was the higher. Some were inclined to think that the costs of one printer would vary enormously from those of another; but he did not believe it could be so in the same part of the country, where both were paying the same wages and using the same material. Some thought the small printer could print more cheaply than the large one. That was flying in the face of what was almost an economic law—that production on a large scale reduced cost. Where the small master printer seemed to print more cheaply, it was because he gave his own labour and charged nothing to depreciation. He had, however, an advantage in being able to give his business close personal supervision, so that although the large printer could print more cheaply than the small one, it was not so to a great degree. Rent varied enormously in comparing one part of the country with another. But in his own office in the heart of the City the cost of an hour's composition was about 1s. 10d., and the rent was only one penny of that amount, so that however much lower rent might be elsewhere, it could not make much difference.

A Cure for Bad Management.

Bad management also increased costs, but the difference did not work out to much per hour, and costing was one of the very best cures for bad management, because it showed up leaks and extravagance. If he was right that in the same area the cost of printing was the same in all offices where the conditions were normal, there was no reason why a standard rate should not be established, as the chairman had suggested, for the metropolitan area. That was one of the objects of the local costing committee for London that had just been set up. Were there any real objections to costing? They heard of the man who was losing year by year, and did not want a costing system to tell him how much he was losing on each job; that would not seem a valid objection except to those who liked to bury their heads in the sand. There was the man who said, "It's no good finding out my costs; I cannot get more than I am getting." That again was a delusion; no man knew what he could get until he tried. Printing was no exception from other kinds of manufacture; it was advisable to find out what its production cost. Obviously it would be better if all had the same costing system; unless they were all proceeding on the same lines the results would be quite different. The system now recommended had been selected out of a number of others. It represented the survival of the fittest.

Its cardinal features were, first, that the business should be divided into as many departments as were necessary—there should be at least the main divisions, into composition, machine and warehouse. The second point was that all specific charges should be allocated to their proper departments, and the third was that overhead expenses should be allocated to departments on some common-sense basis. In the result, if they added together direct charges and indirect, they got the total expenses for each department. The final step was to arrive at the number of chargeable hours in each department; when these were divided into the expenses the result was the cost per hour. The chargeable hour was what their system ought to find. It was not the paid hour, it was the sold hour. Non-chargeable time was time the master printer paid for but could not sell. For instance, in the composing-room there was time spent in clearing and distribution; in the machine-room there was time lost waiting between two jobs. Clearly the hours that were sold must bring a price to cover the cost of those that could not be sold. This meant that if the cost of the paid hour came to 1s. 6d., the price of the sold hour must be 1s. 10d. Besides finding their costs they had to record them; they wanted to be able to find how much time had been spent on any particular job, and by turning those hours into money to see what that job had cost. The system Mr. Goodwin was to explain that night covered all the points required. It would enable the printer to provide in his system for every kind of expense, whereas without it there were a hundred little items he was apt to overlook. For example, the handling of material. The indirect advantages of the system were great; a great many leaks were laid bare and economies could be effected. Those who installed it found exactly the class of work they could do at a profit, and were able to eliminate the less profitable jobs. They must not be afraid of the cost of adopting the system; that was only another form of insurance. It was the most important form of insurance, for the premium was paid to insure that they worked at a profit instead of a loss. (Applause.)

Mr. Goodwin followed with a lucid and interesting exposition of the costing system such as we have already published. At its conclusion,

An Eye-Opener.

The Chairman said they were all very grateful to Mr. Goodwin. For himself it had

been an eye-opener, as he had not previously attended a lecture where the system had been fully explained. From his knowledge of collecting costs he could see the scientific accuracy of this system. They would be using their own figures, and if they did not arrive at accurate costs it would be because they were not honest with themselves. It would be no good to arrive at correct costs, however, unless they got them back from the customer. If there was any business at all which should be properly paid for it was the printing business. He himself was making haste to adopt their costing system as fast as ever he could. (Applause.)

In reply to a question as to what should be done where a stationery and printing business were carried on together,

Mr. Goodwin said it was not really a difficult matter. They should treat the stationer's shop as if it were a customer. He had come across one instance of a man who not only kept a printing and stationery business on one side, but he had a confectionery business on the other. I said, "Well, of course, you have first of all to find out what your profits are on the confectionery side, and you may find it to your advantage to close down your printing and stationery business altogether." (Laughter.) In such a case the thing to do was to draw sharp lines between the different businesses. Generally in the practical application of the system some slight variation had to be made from the model.

In reply to another question, he said that repairs and renewals covered such expenses as replacing work or broken parts. If they put new parts, say geared inkers, to a machine that would not come under this head; it would be a capital expenditure. It should be treated like a new machine, added to capital and depreciation, allowed year by year.

A question was asked as to what should be done supposing a machine was bought and was only worked part of the time.

Mr. Goodwin replied that if the machine was bought for a particular purpose that purpose should be charged with the full cost, the amount of interest, depreciation, and so on. But they might buy a machine thinking to be able to use it twenty-five hours a week and then find they could only get work for it for ten. If they then charged their customers as he had suggested the price might be so high that they would get no work at all. It was a case for the printer to use his own discretion. If he had a white elephant he must use it as such—use it at a lower cost than it had cost him or get rid of it.

The Chairman said that in the good old days, when a newspaper proprietor wanted some special machine used he provided it for the printer. To-day a printer sometimes put down a big rotary machine for a customer who might skip off at the end of a few years. If the old custom were followed to-day there would be fewer losses in the printing world. (Laughter and applause.)

Other questions having been replied to,

Mr. Burt moved a very hearty vote of thanks to the Chairman, to Mr. Austen-Leigh and to Mr. Goodwin. This was seconded by Mr. W. H. Amery and cordially given.

THE RULING MACHINE.—There is no valid reason why a ruling machine should not be as carefully guarded from accumulations of waste and dirt as is a printing press in an up-to-date plant. As a rule, however, the ruling machine is neglected, chiefly for the lack of time; whereas the habit of cleanliness should be cultivated. An important matter, often overlooked altogether, is that when the machine is erected it shall be set perfectly true, a level being used to secure the desired result. It should stand solid on the floor and be as free from vibration as possible. The bolts should be tight, but not binding, and these should be examined occasionally to see that they have not worked loose, causing the machine to sway out of plumb. A piece of strawboard or millboard between the upright posts and the crosspieces often relieves any tendency to binding that may occur. The bearings should be kept quite clear of old grease even though a little benzine has to be used to cleanse the parts. While it may not be always possible to enforce the practice of godliness in a bindery, it is possible to insure the next best thing—cleanliness.—*Printing Trade News.*

The Condition of the Labour Market

IN THE

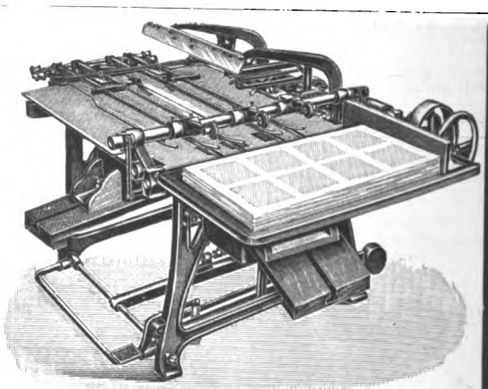
PRINTING AND ALLIED TRADES.

HOME.

According to the Labour correspondents of the Board of Trade, whose reports appear in the *Board of Trade Labour Gazette* for the past month, employment with letterpress printers during October was fairly good, and showed a seasonal improvement. It was better than a year ago. (See Table.)

Districts.	No. of Members of Unions at end of Oct., 1913.	Percentage Unemployed at end of			Increase (+) or Decrease (—) on a	
		Oct., 1913.	Sept., 1913.	Oct., 1912.	Month ago.	Year ago.
London	21,737	5·6	6·8	6·1	— 1·2	— 0·5
Northern Counties and Yorkshire ...	5,883	2·8	3·2	2·3	— 0·4	+ 0·5
Lancs. and Cheshire	7,320	3·0	4·0	4·0	— 1·0	— 1·0
East Midland and Eastern Counties ...	2,835	1·9	2·4	2·0	— 0·5	— 0·1
West Midlands	2,748	2·6	4·5	3·9	— 1·9	— 1·3
S. and S.W. Counties and Wales ...	4,095	2·2	2·2	2·1	—	+ 0·1
Scotland	5,896	1·7	2·0	3·7	— 0·3	— 2·0
Ireland...	2,486	7·2	7·4	6·8	— 0·2	+ 0·4
United Kingdom	53,000	4·0	4·8	4·5	— 0·8	— 0·5

In London, employment was fair generally and better than a month ago.



In other centres, employment was good on the whole and better than a month ago and a year ago. With letterpress printers at Bristol and Dublin, however, it was slack, and worse than a month ago.

FOREIGN.

From France, it was reported that employment in the printing trades during September was still satisfactory, though it showed a slight decline in the provinces. In Germany it was rather slacker, so that the percentage of unemployed amongst Trade Unionists in that line rose from 6·9 to 7·4 (the same as in September, 1912), out of a total of 67,703. In Holland, the percentage was only 0·8 out of 7,224.

THE late Mr. Jasper Rowley, of New Barnet, Hertfordshire, and of Watling-street, printer and stationer, has left a net personalty of £26,153—£30,145.

Printers' Managers and Overseers ASSOCIATION.

Annual General Meeting.

The twentieth annual general meeting of the Printers' Managers and Overseers Association (Parent Body) was held at the "Old Bell," Holborn, E.C., on Tuesday evening, 2nd inst., the President, Mr. C. J. Gray, presiding over a large attendance.

The minutes of the November meeting having been read and passed, the following nominations for membership were confirmed: Mr. A. F. Anderson (Messrs. F. W. White and Co.)—works manager; Mr. T. A. Beckett (London and Norwich Press, Norwich)—machine; Mr. C. W. French (Messrs. Shield and Spring)—composing; Mr. W. P. Hornbrook (Theophilus Creber, Plymouth)—general overseer; and Mr. C. E. Minson (Messrs. John Parry and Co., Ltd.)—general overseer.

The CHAIRMAN read a communication from Mr. R. J. Davies, ex-president, regretting his inability to be present, and expressing the hope that "the boys" would not think he was deserting them.

Messrs. W. Jack, J. Stevenson, and C. W. French were appointed scrutineers of the voting in the election of Council and Officers.

Prizes for Technical Examinations.

Mr. J. FRENCH moved and Mr. T. A. CATLING seconded, that the customary sum of £8 be voted for prizes for technical examinations.

Mr. S. M. BATEMAN said the October Circular gave a list of the prizes awarded by the Association, and he noticed that only five guineas was put down. If that amount covered it, it was hardly necessary to vote £8.

The SECRETARY (Mr. E. C. Moyce) explained that the amount Mr. Bateman was referring to was the list of prizes awarded for the City and Guilds of London Technological Examinations. The remainder of the sum of £8 was voted to various technical institutes in London. The full list was given on the back page of the current Circular.

The motion was then put to the meeting and carried.

Messrs. H. W. Jackson and R. B. Hardie were appointed stewards for the annual dinner on February 7th, 1914.

The Annual Report.

Mr. BATEMAN moved and Mr. HARDIE seconded, that the Report be read, but Mr. PUGH proposed an amendment that it be taken as read, and Mr. F. W. SEELEY seconded. On being put to the meeting, the amendment was carried.

The Report was as follows:—

TWENTIETH REPORT OF THE COUNCIL, 1912-13.

MEMBERSHIP.—The total strength of the Association is 1,019, against 1,017 last year; and is divided as follows: Parent Association, 578; Liverpool, 65; Manchester, 76; Yorkshire, 71; Birmingham, 56; Glasgow, 40; Edinburgh, 59; Dublin, 32; North Midlands, 42. The net increase in number of the Parent Association is 9. There have been 25 new admissions (8 more than in 1911-12) and 3 transfers from other Centres. Losses by death numbered 8, one member has been transferred to a Provincial Centre, and exclusions and resignations amount to 10.

The increase in the number of candidates for membership has been fairly satisfactory, but the Council are convinced that there are still many who ought to be in our ranks, and urge upon every member the duty of trying to secure the adhesion of any who may be eligible.

FINANCIAL.—The following statement shows the principal items of receipts and expenditure compared with the two previous years:—

	1910-11. £ s. d.	1911-12. £ s. d.	1912-13. £ s. d.
Subscriptions received	417 5 0	447 0 0	447 3 10
Death levies received ...	360 8 0	288 14 0	563 15 0
Unemployed payments	92 0 0	183 10 0	117 0 0
Gross expenditure* ...	391 3 4	469 4 6	442 4 6
Total funds	1,049 14 7	1,145 1 11	1,565 13 8

*Exclusive of Death Benefits.

The Council are glad to note that the payments for unemployed benefit have dropped to about the normal amount, being £67 10s. below last year, and only £3 above the disbursement in 1907-8, which was, previous to last year's record, the highest in the experience of the Association. The beneficial effect of this gratifying decrease is seen in the balance on General Account, which stands at £531 12s. 2d., an increase of £44 14s. 10d. on the year's working, although the account bears the grant of £20 towards the 1912 annual dinner, in addition to part of the expense of this year's festival. Calls on the Benevolent Funds have again been heavy, and the balance is some £9 lower than last year. The capital account shows the gross value of the funds to be £1,565 13s. 8d., an increase of £420 11s. 9d. It is of interest to note that the revenue of the Association has this year been over £1,000.

DEATH BENEFIT FUND.—The number of deaths during the financial year was ten, against four last year. Eight of these (Messrs. Ellis, Hayward, Buchanan, Bye, Girling, Quelch, Keliher and Fox) were members of the Parent Association; one (Mr. Brace) of the Yorkshire Centre; and one (Mr. Hadley) of the Birmingham Centre. The Fund shows a balance of £752 17s., which will be augmented by about £210 when all payments are completed. With reference to the large amount shown as "levies outstanding," it must be borne in mind that the Quelch levy was only called for in November, and that the Centres in some instances did not begin to collect the three previous ones until October. Mr. R. Keliher was not entitled to death benefit.

INVESTMENTS.—Since their last report your Council have made a further investment of surplus funds, the stock selected being New South Wales 4 per cent. and the amount expended in the purchase £305 6s. The total amount invested is nearly £1,000, and is shown in capital account at purchase price and not at market value.

MEETINGS AND SOCIAL GATHERINGS.—The monthly meetings have been well attended. In the months of May, June and July, the meetings were devoted to the consideration of the report of the Special Committee on Future Policy, whose recommendations were discussed and modified and a Committee appointed to advise the Association as to the alterations of rules rendered necessary. The Revision of Rules Committee is now sitting at frequent periods. Lectures on technical subjects have been given on three occasions and proved very popular and attractive, and the Council on behalf of the members tender their sincere thanks to Mr. D. Greenhill ("The Three Colour Process in Theory and Practice"); Mr. A. H. Motley ("The Newest Mechanical Method Applicable to Lithography in all its Forms"); and to Mr. Frank Heywood ("Some Reflections on Offset Machinery"). The Association is also indebted to other ladies and gentlemen for their help at concerts, etc. A special meeting was held in May at the Salisbury Hotel, in conjunction with the Costing Committee of the Master Printers' Federation, when Mr. Howard Hazell, Mr. Harry Cooke, Mr. R. A. Austen Leigh, and other gentlemen explained the system advocated by the Committee. The meeting was very largely attended and great interest shown in the work of the Committee. The Annual Dinner and Bohemian Concert were both successfully carried out. A united gathering of the Association was held at Liverpool, when members from all parts of the kingdom attended and a most interesting and enjoyable time was spent by those who were able to participate. A full account has already appeared in the Monthly Circular, but your Council feel that it is their duty to record in this report the best thanks of the Association to the Liverpool Centre for their hearty welcome and hospitality.

TRADE CUSTOM AS TO NOTICE.—Members have already been informed of the progress made on this question, and, so far as the letterpress trade in London is concerned, the matter is at rest. As regards the lithographic section, your Council await a communication from the Amalgamated Society of Lithographic Printers. A reply from the Typographical Association affecting the letterpress trade in the Provinces is now under consideration by the various Centres.

Several cases of dismissal at less than a month's notice have been brought before your Council during the year, and in each instance a letter to the firm has been sufficient to secure the member's right.

TECHNICAL EDUCATION.—The Hon. Technical Secretary, Mr. C. J. Gray, again undertook the organisation of the practical examinations in Typography under the City and Guilds of London Institute. This work involves the appointment of supervisors throughout the United Kingdom, and the Council feel sure that the members will fully endorse their appreciation of the valuable work done by Mr. Gray in this direction. The customary prizes have been awarded to the successful students, and many letters of appreciation have been received from the authorities of the Technical Institutes.

"COMING-OF-AGE" CELEBRATION.—The ensuing year will be the twenty-first in the history of the Association, and in accordance with the resolution of the October general meeting, it is intended to celebrate the event by holding a United Gathering of the Association in London on May 23rd, 1914. This date has been selected because the Printing Exhibition will at that time attract a large number of our country members to London, and it is hoped that every member of the Parent Association will make it his duty to take part in the celebration and help the Council to extend the heartiest possible welcome to our visiting members. The Council has appointed Committees to organise the gathering, and they will be glad to receive suggestions

Digitized by Google

from members who will interest themselves in any way. Further details of the Council's plans will be given as early as possible.

PENSION NO. 2.—This has been completed during the year by the payment of a sum of £260 to the Printers' Pension Corporation, making a total of £400 5s. handed to that body. A small balance (£3 6s. 8d.) is in hand.

THE PROVINCIAL CENTRES.—The eight affiliated Centres continue to maintain a prosperous standard, and are in complete harmony with the Parent Association and each other. They are all in a sound financial condition, and for the most part progressive in membership. In one or two instances local conditions are at the moment somewhat unfavourable to rapid progress, but there is no doubt that time will remove the difficulties, and those who are now working perseveringly for the Association will have their reward in the near future.

VACANCIES ON THE COUNCIL.—The retiring members of the Council are: Messrs. A. W. Hart, G. Phillips, J. C. Pugh, J. A. B. Reed, and A. H. Wilson. Messrs. Phillips, Pugh and Reed are ineligible for re-election. Messrs. Hart and Wilson, who were co-opted to fill vacancies, are eligible. Mr. T. A. Catling, who has occupied the position of Vice-President during the last twelve months, will not seek re-election in that capacity. The Council desire to place on record their full appreciation of the valuabe services rendered by him during his term of office. The Council regret that the Assistant-Secretary, Mr. C. Morley, has expressed his wish to retire from office. Mr. Morley has been an untiring worker for the Association since its establishment. He was the first President, and in one capacity or another has held office continuously since 1893. For the valuable work he has done during these twenty years, the Council feel sure that the members will accord him their heartiest thanks.

ATTENDANCES OF THE COUNCIL.—The Council have held fifteen meetings and the record is as follows:—

	Possible.	Actual.
Catling, T. A.	15	15

C. J. GRAY, *President.*
E. C. MOYCE, *General Secretary.*

November 18th, 1913.

Discussion on the Report.

Arising out of the Report, Mr. E. H. BERRYMAN said there was one point he would like to raise with regard to membership. They saw, according to the Report, that ten gentlemen had ceased to be members. It was put under two heads—some were resignations, and some had been rejected, he took it. He thought it a little invidious because they had no list of members before them, and had to wait until one came out, so that it was hard to identify now the gentlemen who had ceased to be members. He suggested that it should be put in this way: That the following gentlemen during the year have been accepted to membership, then give their names; that the following members have died during the year—give their names also; and that the following gentlemen have ceased to be members of the Association, and give their names. They might have a particular friend in the Association with whom they were not in touch, and he might be rejected for membership without them being aware of it, and they would not have the opportunity of asking a question on that point. He therefore suggested that it would be a good thing if these details were tabulated in the Report. With regard to the Death Benefit Fund, while they deplored the number of members who had died this year, and while they were very pleased indeed to think they had been enabled by this levy to assist those who were left, they should also sometimes think of those who had to pay the death levies. It was a very easy matter, perhaps, for gentlemen in the room to pay the 19s. against the 12s. paid last year. But there might be other members who found it very hard indeed to pay all those levies, and the difference between 19s. and 12s. was a very real one to them. They were told that when a sliding scale was introduced, and the number of deaths was considered heavy some relief would be given from the fund they had now piled up to nearly a thousand pounds. Certainly when they had seven or eight death levies in one year it would be a good thing to remit one and pay the £50 out of this accumulated fund, and so relieve those who found it a burden to pay the death levies.

Mr. BATEMAN supported Mr. Berryman's remarks, and asked if Mr. Keliher had run out of benefit.

The SECRETARY, in reply, said the question of giving the names of the members who resigned was one of policy on the part of the Council, and no doubt the Council would note Mr. Berryman's remarks. With regard to the Death Benefit Fund, Mr. Berryman was just a little out in his figures. He quoted 12s. as the levies for last year and 19s. for this year. The payments last year amounted to 7s., and the present year to 15s., so that there was a difference in the two years of 9s. in Mr. Berryman's figures. He had no authority to express the opinion of the Council on the matter, but roughly stated, he thought that when they reached the point of 15s. as a payment on account of premium for the payment of the maximum benefit of £50, the Council did not think that was at all a dear death benefit premium. They had to consider above all things the ultimate safety of the fund. They were of opinion that at the present time the building up of a strong reserve was by far the safer policy for the members in the future. When members had not been able to pay the benefits, they had received great assistance from the Council and had retained their membership in the Association. In reply to Mr. Bateman's question, Mr. Keliher was a member who joined when he was over the age which entitled him to death benefit, and therefore had never paid any death levies and of course did not qualify for death benefit.

Mr. SPRING asked why in paragraph 1 of the Report the loss by death was put as eight, and in the Death Benefit Fund paragraph they were told the loss by death had been ten.

The SECRETARY explained that eight members of the Parent Association died, and the first paragraph of the Report was dealing with members of the Parent Association. The Death Benefit Fund was dealing with the whole of the Association, and two of the ten members referred to were members of provincial Centres.

Mr. BERRYMAN, referring to the paragraph headed "Trade Custom as to Notice," said they were told that an agreement had been made with two unions in London, and he asked whether that agreement had been put on paper—whether there was a formal agreement drawn up or a treaty.

The SECRETARY said there was no treaty on the matter. But there was an understanding on the minutes of both societies concerned that the month's notice would be recognised at all times by the London Society of Compositors and the Printing Machine Managers' Trade Society.

Mr. BATEMAN said it was perhaps the right moment to ask whether any agreement had been come to at the Manchester meeting attended by Mr. Moyce and Mr. Seeley.

The SECRETARY said the report had not been issued yet, because a reply had been received from the two societies and was now under consideration. In Manchester they were more affected in the case than they were. The reply from the Lithographic Printing Society was only received on the 21st of last month. The Provincial Centres' reply to the Typographical Association scarcely affected them at all. The matter was now being considered by the various Centres and all their reports upon it were not in yet. They would come before the Council as soon as they were. They could not be made public until the whole of the negotiations were complete.

Mr. Morley's Retirement.

Mr. MOYCE called attention to the paragraph in the Report under the heading "Vacancies on the Council," and said he did not think they ought to pass that without some reference to the retirement, after twenty years' service to the Association, of their friend, Mr. Morley. (Applause.) He was the first president of the Association and in one capacity or other had maintained an interest in the Association for twenty years. He had been in office for the whole of that time, and he would not like this to go through as a matter of course, but thought they should emphasise the Council's Report and show him that the feeling of the Council was that of the whole of the membership of the Association. Mr. Morley laid down his pen and his position as an active member on the Council of the Association with the heartfelt regret of all its members. (Applause.)

Mr. W. H. BURCHELL said it was indeed a heart-felt regret to him that Mr. Morley, after all these years, was retiring from active work for the Association. Some twenty-three years ago Mr. Morley and he were hard at work trying to bring this Association into existence, and he had great pleasure in saying that Mr. Morley was one of the hardest workers they had at that time. He hoped they would not let this occasion pass by without doing something substantial, to show that they appreciated what he had done for the Association.

Mr. BATEMAN said as one who was under Mr. Morley's chairmanship and one who on many occasions crossed swords with him—and he had always found him an honest opponent and one worthy of his steel—he sincerely regretted Mr. Morley's retirement, owing to the state of his health. He hoped that freed from the worries of the assistant-secretaryship, he would regain his usual health and would come to the monthly meetings and have a go at every one of them.

Mr. W. HERMON GILL said he wished to place on record his appreciation of his old friend. He remembered well his arduous work for the Association, and the able manner in which he conducted the meetings of the Association whilst he occupied the chair. In the early days they had more fighting than they had to-day, and Mr. Morley expressed his feelings in a competent and forcible way. He was very sorry indeed their old friend was about to retire from the position he had held with distinction for so many years. It was a grand and creditable thing for a man to be able to say that for twenty years he had been an active officer in this Association. He had seen the Association grow from its inception

to the powerful position it held to-day. He had rendered yeoman service to the Association, and he wished to associate himself with the words that had fallen from other speakers that night, that Mr. Morley's services should not go unrewarded.

Mr. F. W. SEELEY said that after the kind words that had been said of Mr. Morley, both that night and at the Council meetings, he thought there should be some tangible recognition of his services. He suggested that something should be voted out of the funds of the Association. Later in the evening Mr. Seeley moved that another year's salary be paid to Mr. Morley, and Mr. W. HERMON GILL seconded.

Mr. H. W. JACKSON proposed as an amendment that Mr. Morley be presented with a cheque for twenty guineas, representing a guinea for each year he had served the Association so faithfully. Mr. BATEMAN seconded, and the amendment was carried unanimously.

Mr. MORLEY expressed his hearty and sincere thanks. He had occupied a unique position in the Association, as had been animadverted upon by some members, and he was particularly pleased to receive so high a character from Mr. Bateman. He had always endeavoured to be thorough, and he appreciated the confidence they had shown in him by voting him a sum of money. He had always had the interest of the Association at heart, and had made many happy associations during his membership. Those who went on the Council made associations there that lasted not for a day but for life. Whilst there might be disagreements, they disagreed in the abstract, and he had always endeavoured to keep that in mind. He had often been in the minority, and sometimes he had been in the majority, but as members had testified, he always had the courage of his convictions and expressed them, he thought, without being offensive to anyone. He was retiring with regret. It was his ambition to be 21 years in office—it was a lifetime—but he found the strain upon him too much ; he was now in his 68th year, and he required rest. The hope had been expressed that he would still attend the monthly meetings. He expected he would and he hoped he would be heard. (Applause.)

Election of Council and Officers.

The CHAIRMAN announced the result of the voting for the office of assistant secretary as follows :—Mr. G. Phillips 49, Mr. W. Hermon Gill 20, and he declared Mr. Phillips elected amid applause.

Mr. PHILLIPS, in returning thanks for the confidence that had been placed in him, remarked that he was not a new member of the Association, having been one for thirteen years, and during that period he had served in many minor ways and for four years had sat upon the Council. He regarded his election that night as a great compliment, and as far as he possibly could it would be his endeavour to be a worthy successor to his friend Mr. Morley and those who had preceded him in the office of assistant secretary.

There were seven candidates for five vacancies on the Council, and the ballot resulted as under :—Messrs. T. A. Catling 63, A. W. Hart 55, A. J. Rowley 49, A. H. Wilson 49, H. J. Forder 42, B. C. Albert 35, and T. B. Lapworth 24. The first five were declared elected.

The undermentioned members had been nominated unopposed for the respective offices:—President, Mr. C. J. Gray; Vice-President, Mr. J. C. Pugh; Treasurer, Mr. C. Durston; Trustees, Messrs. W. H. De Wilde and F. W. Seeley; Secretary, Mr. E. C. Moyce.

The Accounts.

Mr. C. E. PARRY, one of the auditors, said that he and his colleague went carefully through the accounts and compared the vouchers, and they found everything satisfactory. He was personally quite satisfied with what he saw.

Mr. W. HERMON GILL supported the remarks of his co-auditor. It was a time-honoured custom in the Association to pay a tribute to the secretary for the very able manner in which he kept the books. The figures presented to them were plainly put and they had no trouble whatever in satisfying their consciences that the accounts were perfectly correct. (Applause.)

In reply to Mr. BATEMAN, the SECRETARY explained that the stock of pendants was carried forward in the General Account from year to year. In the 1912 balance sheet the stock was £15 14s. 6d. and those unsold £9 13s. This year the stock was £9 13s. and those unsold £4 18s. 6d., the receipts for the year being £4 14s. 6d. The stock of pendants was treated as an asset, and a decreasing one as the stock ran out. With reference to Mr. Bateman's remark that as the item "By Lists of Members (per Centres) £1 12s." was lower than in 1910, the printing was evidently much cheaper than it was, the Secretary said the item this year should have been £1 17s., but 5s. came in too late to be included in the balance sheet. With regard to the dividends on investments, he quite agreed with Mr. Bateman that a sum should be transferred to the Death Benefit Fund or the Benevolent Fund, but he asked them to bear in mind two points: First, that no working expenses were charged to the other accounts. This point had not escaped the attention of the Council. Then he did not think himself—and the members of the Council agreed with him—considering that, on the adoption of the report of the Sub-Committee on Future Policy the funds would be rearranged, it would be worth while for this one issue to disturb the existing arrangements this year.

Replying to another enquiry by Mr. BATEMAN, on the expenditure side of the General Account, the SECRETARY said the items of expense on the City and Guilds examinations were sanctioned by the Council. The expenses for postage were approximately the same amount as in the previous year, but Mr. Gray considered he was out of pocket something like 10s. a year for the four years he had been technical secretary for various items he had not charged, and the Council sanctioned the amount appearing on the balance sheet.

A Member remarked that a great many members of the Association were indebted to Mr. Gray for the services he had rendered to the Association as technical secretary. (Applause.)

Mr. GRAY said he had received on an average three communications a month from members of the Association on technical matters of all kinds, and there were many matters he did not bring before the attention of the Council. In some cases he met the gentleman to talk the matter over. He was always pleased to receive these communications, for the Association existed to help one another out of difficulties, but he thought he was entitled to be reimbursed for out-of-pocket expenses. (Hear, hear.) He did not ask for payment for any work he did for the Association, nor would he seek any office which included payment.

Replying to Mr. SPRING, the SECRETARY said the dividend on the £400 investment in London County Consolidated 3 per cent. Stock was paid on the face value of the stock, and the amount shown in the balance-sheet was less income-tax, which was deducted at the bank. That applied to all three stocks. With regard to the £300 New South Wales 4 per cent. Stock, that was paid at the end of January or the beginning of February last, and there had been only one dividend on that stock ranking in the present account. The dividends on the London County Stock were paid quarterly and four amounts of £2 16s. 6d. were included there. The dividend on the £300 New Zealand 3½ per cent. Stock was paid half-yearly.

On a question raised by Mr. BERRYMAN on the Annual Dinner Account, the SECRETARY replied that the reason why the sale of tickets was eclipsed by the Holborn Restaurant Account was that the price of a certain number of tickets for guests, which were not paid for, and the cost of their entertainment were included in the Holborn Restaurant Account.

Mr. C. R. WARDE suggested increasing the price of the dinner tickets, so that the deficit appearing year after year could be wiped out. He was supported by Mr. BATEMAN, who said he thought they ought to make the dinners and bohemian concerts self-supporting.

Mr. PUGH took strong objection to this, and said that to ask the ladies to pay more for the one concert given in the year in their honour was entirely away from the idea of the Association. He thought they could afford to have a loss on the bohemian concert.

The SECRETARY pointed out that the Council always considered, and they had the majority of the members with them, that the annual dinner and bohemian concert achieved the objects of the Association as defined in their rules, and they considered they were legitimately entitled to expend a small portion of the funds in providing entertainment and relaxation for the members. The bohemian concert was a very popular social feature of the Association, and he was sure the majority of the members would not grudge the slight expense.

The CHAIRMAN said the suggestions that had been made should be put before the Council, and they would act in the matter according to their discretion.

With reference to the Capital Account, the SECRETARY, replying to Mr. Hamilton, said the amounts appearing in the assets as investments were intended to show the members the way the money had been spent.

Mr. HAMILTON thought that if there had been any appreciation or depreciation in the investments it should certainly be shown in some form or another.

The CHAIRMAN said if it was the wish of the general body of members this would be done.

After some further discussion, Mr. WARDE moved the adoption of the Report and Balance Sheet, complimenting the Secretary, and all who had helped in preparing it, for putting it before them in the manner they had.

Mr. BURCHELL seconded, and the motion was carried.

Mr. BURCHELL remarked that when a member was ill there seemed to be a loss of that fraternal feeling which should prompt them, or the member resident nearest to him, to visit the ailing member. He quoted instances of a member living in almost the next street to one who was ill, and knowing nothing about it until he heard of his death.

Mr. J. J. SMITH spoke in a similar strain, and

Mr. DAWSON pointed out that they had a Revision of Rules Committee, and now was the time to send in suggestions to this Committee.

Thanks to Retiring Officers.

Mr. W. HERMON GILL proposed a sincere vote of thanks to the officers of the Association for their services during the past twelve months. He complimented the Chairman on the admirable way in which he had conducted the meetings, and the Secretary for his indefatigable exertions.

Mr. JACKSON seconded, and the motion was cordially carried.

The CHAIRMAN and SECRETARY both suitably replied, the latter remarking that this was probably the last time he would be succeeding to the office of secretary of the Association. He might alter his mind in the course of twelve months, but he knew they could not find a man in five minutes to step into the position, and whilst he would give up the office with great regret, it would be with still greater regret if he felt they had not a man ready to follow him.

The meeting then terminated.

Stationers' Social Society.

Annual Bohemian Concert.

The annual Bohemian concert was given by the Stationers' Social Society the other evening, in the Throne Room, Holborn Restaurant. There were about 150 people present, including the members and their lady friends, and a most enjoyable time was spent, the programme presented being all that one could desire. This large attendance shows the interest that is taken in the society, despite other attractions, as on the same night the annual dinner of the British Wood Pulp Association, and the monthly meeting of the Papyrus Lodge of Freemasons, were held. Mr. W. Bornecke (president) was in the chair, and during an interval Mr. S. Porteous took the opportunity of saying a few kindly words on the services that had been rendered by the chairman. He proposed the health of "The President," and congratulated the Stationers' Society on the excellent work achieved by Mr. Bornecke during his year of office. The committee greatly appreciated the sterling qualities of the president, and they all hoped that he would continue his good services to the society after his term of office had expired. Mr. Bornecke suitably replied, and thanked the members of the society for the support given him while he occupied the position of president.

The musical arrangements, as usual, were in the hands of Mr. E. Bradshaw, who leaves nothing undone, and the pianist was Mr. William E. Manaton. Songs were rendered by Miss Constance Wentworth, Miss Pattie O'Hanlon, Mr. Ernest Stepan and Mr. Norman G. Notley, who were greatly appreciated and listened to with pleasure. Mr. Manaton also gave a couple of pianoforte solos, whilst the humorous element was capably sustained by Mr. Geo. Blackmore, Mr. Alex. Chentreus, the Anglo-French comedian, who gave selections from repertoire, Mr. Will Bentley, an old favourite, and Mr. Hector Gordon, who contributed a humorous Scottish interlude. A popular *siffleur* wound up a most pleasant evening, and Mr. McKenzie, the energetic secretary, and his committee must be complimented on the success of their Bohemian entertainment.

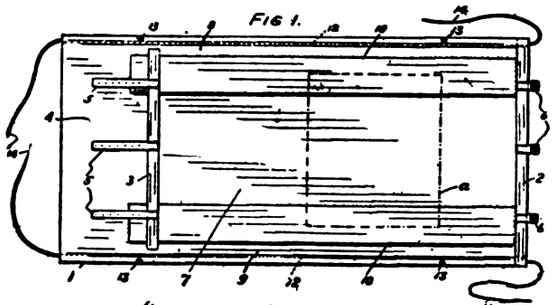
Covering for Paper Rolls.

The object of this invention, patented by Mr. John C. Martin, of Wyncote, Pa., U.S.A., is to provide a substitute for the paper wrapper now used in the consignment of rolls of paper to consumers.

It is proposed to use a canvas or like cover which may be capable of repeated reuse, and which is provided with pads that cover the adjacent cylindrical and end surface parts of the roll and which constitute spaced projecting ribs.

Fig. 1 is a top or plan view of the outside of a wrapper embodying features of the invention and showing in dotted lines the position of the roll of paper. Fig. 2 is a transverse sectional view of the wrapper shown in Fig. 1, taken at or near the middle thereof. Fig. 3 is a perspective view showing the wrapper applied to a roll of paper. Fig. 4 is a view illustrating the same and showing how the roll may travel or be rolled on the spaced projecting ribs, and Fig. 5 is a view showing how the pads which constitute the ribs cushion the roll and prevent splitting of the paper.

FIG 1.



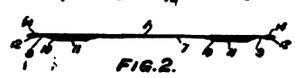


FIG.2.

In the drawings 1 is a cover of a textile material, such as canvas. 2 is a reinforcement or reinforcing strip appliedat one end of the cover, and 3 is a reinforcement or reinforcing strip applied near the other end of the cover so as to provide a flap, 4, which may overlap when the cover is placed around a roll of paper. There are fastening devices, 5 and 6, applied to the strips 2 and 3, and, as shown, they comprise straps and buckles. They are arranged or spaced inward from the edge of the cover so as to provide a body portion, 7, and flaps 8 and 9 for covering the ends of the roll. 10 are pockets applied to the cover and spaced inward from the edge thereof and extending between the strips 2 and 3, or the fastening devices. In these pockets 10 are pads 11 as of felt. The pockets themselves may be made of stronger material than the rest of the wrapper, and they can be removed by ripping out their stitches or fastenings and replaced as by sewing on new ones when worn. 12 are marginal hems or pockets and 13 are marginal gromets or eyes and 14 are ropes or cords which run through these hems and can be secured or made fast to the eyes.

In use the described cover is put on outside of the roll *a*. If desired, the latter may be inclosed in a very light or single sheet paper wrapping, although this is unnecessary and is principally useful when the rolls are to be taken out of the covers and stored. The fastening devices 5 and 6 are properly connected with the flap 4 overlapping. The cords 14 are drawn tight and secured through the gromets. The result of this is that the pads overlie the corners of the roll and cover a part of the end surface and the adjacent part of the cylindrical surface. Ifthe roll of paper thus enclosed in the described cover is dropped or subjected to shocks or jars these are cushioned by the pads and the paper of the roll is not split or damaged. If the roll of paper in the cover is to be rolled about it travels on the spaced projecting pads and the edges of the roll are not feathered or disturbed. The cover itself can be applied to the roll at the paper mill and taken off at the destination and returned to the mill so that it can be repeatedly used.

FIG.3.

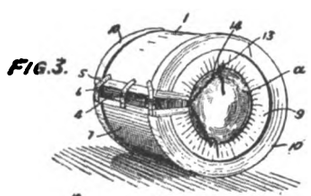

FIG 4

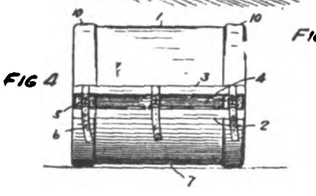

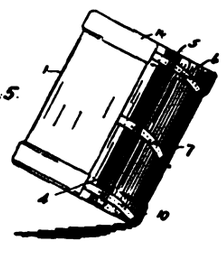

FIG.5.

The Snapping of Belts.

According to the *Allgemeine Gerber Zeitung*, there was an instance met with of a leather belt suddenly snapping without any apparent cause. The leather seemed to be of good quality, but by careful examination of the section it was found that at certain points the texture seemed to be disintegrated and exactly at the spot where the belt was weakest. In the parts affected and on the grain side there were slight superficial swellings in direct correspondence with the disintegrated parts of the texture. Analysis demonstrated that just in these places there was an abnormal amount of grease. This defect is met with, to a greater or less degree, when the hot leather is not greased with proper care. The belt should be perfectly dry when greased and have been kept for a long time in a heated place. If any moisture is left in the leather it is transformed into steam at contact with the grease heated to 90 degs. C. thus swelling the leather and disuniting the fibres. The damage does not appear on the surface as the steam reaching this part easily escapes, but in the swollen places the grease quickly replaces the moisture, which explains the excessive amount of grease and swelling. Consequently care should be taken that the leather does not contain more than a minimum amount of water to remain pliant before applying hot grease, so as to avoid sudden formation of steam and laceration of the fibres.

British Paper in Hong Kong.

There is a steady demand for British paper of "all sorts" in Hong Kong, as the following figures relating to British exports for the past five years show:—

1912	37,472 cwts.	£23,434
1911	53,862 ,,	23,405
1910	19,310 ,,	17,193
1909	9,583 ,,	12,203
1908	9,212 ,,	10,882

Paper Exports to New Zealand.

The exports of paper from the United Kingdom to New Zealand during the last five years were as under:—

1912	216,959 cwts.	£241,519
1911	211,519 ,,	226,340
1910	179,728 ,,	201,477
1909	151,123 ,,	174,074
1908	154,084 ,,	180,923

THE late Mr. James Metcalf Hemington, of Moseley, wholesale stationer and paper bag maker, has left estate of the value of £17,636.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help a-d an ornament thereunto."
FRANCIS BACON, Baron Verulam.

Noah's dove has had a long distance flight. As far as Aberdeen this time. Where it found granite in the guise of printers.

o o o

I don't mean that they are "stoney"; only that they are hard and strong.

o o o

Which being interpreted means that the Costing Organiser, Mr. A. E. Goodwin, has been "doing" Scotland.

o o o

Between thirty and forty printers foregathered in the grey city. They came, and saw, and — concurred.

o o o

When I went to Perth I found it was a small city; it's within two "Inches"—the North Inch and South Inch—the names given to two recreation ground "lungs."

o o o

Aberdeen's a large city. It includes Cornwall—which you will agree is stretching it a bit.

o o o

Cornwall, master printer of Aberdeen, came to London last February. He was then wearing the prefix which I've temporarily doffed. He was impressed by that famous Kingsway Congress; and his firm are installing the costing system. So he was a natural charm for this month's meeting.

o o o

Mr. Bisset, the able and virile secretary of the Scottish Printers' Alliance, and Mr. Goodwin were with Mr. Cornwall, a good trio, and so I suppose the outcome will be that other Aberdonian printers who have been "contented wi' little" will soon be "cantie wi' mair."

o o o

Glesca's flourishing finely, by the printing of the Word, as well as by its preaching.

o o o

About 400 printers met at the Glasgow meeting Mr. Goodwin addressed. That makes it easily the next best to the London gathering. And they heckled at Glasgow.

o o o

At the Edinboro' Congress last spring the printers surprised the southron's by the lack of questions. Or was it that the number of set speeches rather curtailed the chance.

o o o

Perhaps that was it. I'm sure the wits of Auld Reekie's printer's are as lively as ours, that ilka one of them can say wi' Burns "my barmy noddle's workin' prime."

o o o

I went to the Scottish Alliance's annual dinner last spring. That and the like function of the Association of Correctors of the Press in London are the only two dinners in the craft which I've ever really enjoyed. I can't stand dull speeches.

o o o

I'm Scots mysel'; only I saw that so many of the best Scots came south, that I thought—beg pardon, ay thocht—'twad save time and money to get born down in Berkshire, and run up north every ten years cross the Tweed and have a look at my ain countree.

o o o

"What d'you think of Englishmen" one Scotsman was asked on returning home after a few years in the south. He replied that he never saw any, as he only met heids o' depairtments."

o o o

Nelson's vast printery was visited by Mr. Goodwin.

o o o

Thirty thousand books are turned out per diem, "under newspaper conditions," and the exact cost of each one is known to the firm. The firm do no jobbing. They don't want to "do it all." Their costing is thus comparatively easy; but they attend to it all the same.

o o o

It's the easy things we tend to neglect. As old Naaman, the Assyrian, proposed to do, until his wage working staff, journeymen and others, pulled him up and made him act sensibly.

o o o

Nelson's, of Edinburgh, say "Our Costing System is our best asset."

o o o

The craft's troubles just now concern binding. Both in Scotland and England. In Scotland they seem to be nearing a settlement.

o o o

"When I have an upset with any one," Snowden Ward of the "Process 'Engraver,'", once said to me, "I always try to do something better than get back to the *status quo*. I try to get into better relations than existed before."

o o o

There's a hint for Scotland and for Esher.

o o o

Twenty-three printers in Nottingham received a surprise visit from Noah's dove. Nineteen of them are sacrificing old costing systems; a very acceptable burnt offering. Only a few have got the new system absolutely operating at the moment. But "the great thing is not so much where you stand at a particular moment as in what direction you are moving." The nineteen are moving to the new system.

o o o

Mr. Forman made a very good point at a recent Nottingham meeting. If one printer installed the system it was a good thing; but if two installed it it was not simply twice as good. For the first man it might be ten times as good, so far as these incalculable things can be expressed in figures. If a dozen installed it it would be a thousand times as good for the first installer, and for each installer, a thousand times as good as if one man alone put the system in.

o o o

Cornwall's county motto very specially applies: One and all.

o o o

I know a house not a thousand miles from Edinboro which is "bunged up" at this moment, as workshop phrase goes, with work which at least one practical and responsible man in the place detests, for it is very troublesome, and he knows that it is losing them a lot of money every day; and will do for several weeks. It's not contract work. They took it with their eyes one-tenth open. It serves them right; but the immediate point is that it serves others in the craft very badly.

o o o

Mr. Forman declined to alter his quotation for one big job; his costing system had shown him that his figures were right. It was lost; as he understood. But in a little while the morning's post brought it in after all and at his price.

o o o

Those are the sort of gleanings that make the dove's flittings worth while. When we read these things we feel almost as pleased as if we'd got the profit ourselves. Didn't the Kingsway 1,200 cheer when Mr. J. T. Cooper detailed one of his own price victories.

o o o

Rejoicing with those that do rejoice is harder than weeping with those who weep.

o o o

But it's worth while. You'll never be absolutely destitute of enjoyment so long as you can enter into the good fortune of your friends.

A journeyman binder writes me thereanent: "Dear Quads, I am quite willing to rejoice in my employer's getting an extra profit if he'll equally rejoice in my getting an extra shilling or two per week." Or if I haven't really read such a note, you see that I quite conceivably might.

o o o

More anon about Mr. Goodwin's touring.

o o o

The new Costing Committee members mentioned in last week's "Quads," are members of the London Costing Committee.

o o o

The National Costing Committee remains, as I understand, just as it was constituted at the June Conference of the Federation at Liverpool.

o o o

Costing Committees have been formed in several large centres, and now a very practical and influential committee has been formed in London.

o o o

A most welcome desk diary has just come in from the St. Clement's Printing Press. It is a loose-leaf calendar diary, standing on a metal base. It takes only 7 by 3 inches of my desk; or if for a moment I want to get it off my desk I even hang it up. That to be sure I'm not meant to do; but life's too short to worry over-much about other people's intentions.

o o o

You make your mems on Tuesday, December 9th, on the back of the slip for Wednesday, December 10th. At the top of each page is a useful advertisement hint such as "We can print, fold, enclose and post 150,000 company prospectuses in 24 hours."

o o o

This desk diary is not quite perfect; so Mr. Hart may be happy, for he dreads being entirely satisfied as much as I do.

o o o

Blank spaces either side of the centre date panel and full lines panelled at the foot, with the 'phone numbers introduced there, would, I think, have pleased me better, and be just as good for advertising.

o o o

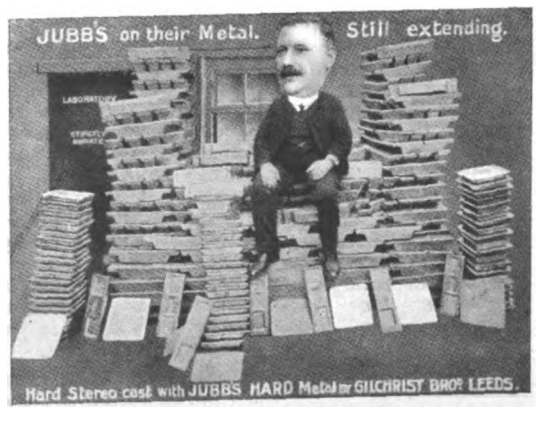
I don't quite like the four-to-pica rule round the top legend. It competes a little too much with the bordering around the date.

o o o

If you think that's hypercriticism send along something of your own; and I'll be hypercritical of you.

FRANK COLEBROOK.

CO-OPERATIVE PRINTING WORKS. — The Printing Works of the Co-operative Wholesale Society continue to increase their output. The supplies from the three establishments at Manchester, Leicester and Pelaw-on-Tyne for the thirteen weeks, amounting to £46,267, a total increase of £4,242, or equivalent to 10 per cent. on the corresponding period of last year. The trade at Manchester works was £34,059; at Leicester, £6,250, and at Pelaw on-Tyne, £5,958. These three works belong to the federation of retail co-operative societies, and are quite independent of the other co-operative printing societies at Derby, Blackpool. Swansea, Newcastle, London, Nottingham and Long Eaton.



THE late Mr. Thomas Dash Philip, of Messrs. Philip, Son and Nephew, Ltd, has left estate of the value of £26,554.

Trade Notes.

THE strike at Messrs. Burn's Bookbinding Works, in Kirby-street, Hatton-garden, E.C., still continues, and prospects of a settlement seem as remote as ever.

WE understand that Mr. Evan Spicer, of Belair, Dulwich, has, after an association of 45 years with the business, retired from his position as a director of James Spicer and Sons, Ltd.

THE King and the Prince of Wales have each sent £10 to the fund which is being raised, for the sixteenth year in succession, by *Reynolds's Newspaper*, to give a Christmas dinner to London sandwichmen.

THE death is announced of Mr. Septimus Vaughan Morgan, a partner in the firm of Morgan Bros., hardware merchants, etc., under whose auspices are issued the *Ironmonger* and the *Chemist and Druggist*. He was 82 years of age.

THE Institute of Printers and Kindred Trades will hold a Bohemian Concert at the St. Bride Foundation, Bride-lane, E.C., on Wednesday evening next, and a capital programme has been arranged. The chair will be taken at 8 o'clock by Mr. H. J. Goss, chairman of the Council.

IN the King's Bench, on Thursday last, Mr. William Lotinga, the sporting journalist, was awarded £210 damages against the proprietors of the *Globe* for wrongful dismissal from his post as sporting editor of that paper. Judgment was entered accordingly, with costs.

ON Saturday "The Future of the Journalist" was the subject of an address by Mr. Robert Donald, president of the Institute of Journalists, read before the Glasgow District of the Institute. The writer said that he looked forward to the time when the Institute and the National Union would collaborate to do something really big and effective for journalism.

THE London Master Printers and Allied Trades Association held their seventeenth annual dinner, on Tuesday night, at De Keyser's Royal Hotel, Victoria-embankment, when a large company was presided over by Mr. W. A. Waterlow (President). "Success and continued prosperity to the Association" was proposed by Mr. George Stembridge (president, Master Printers' Federation), and was responded to by Mr. W. A. Waterlow, and the chairmen of committees (Messrs. Alfred F. Blades, E. C. Austen Leigh, and R. D. Workman). The speeches were good, and a capital musical programme was provided. A fuller report of the function will be given next week.

A COURSE of eight lectures on "The Development of Letterpress Printing and Book Illustration and on the History of the Printing Press," will be delivered at St. Bride Foundation Printing School by Mr. R. A. Peddie (librarian of the typographical library), on Mondays at 7.30 p.m. The syllabus is as follows:—January 12th, "Letterpress Printing, 15th and 16th centuries"; January 19th, "Letterpress Printing, 1601-1800"; January 26th, "Letterpress Printing from 1801"; February 2nd, "Book Illustration and Decoration, 15th and 16th centuries"; February 9th, "Book Illustration and Decoration, 17th and 18th centuries"; February 16th, "Book Illustration and Decoration, 19th century and to the present day"; March 2nd, "The Printing Press and its History"; March 9th, "The Printing Press and its History." Admission free. Each lecture will be fully illustrated by lantern slides, and a collection of books and prints will be exhibited during the evening.

TENDERS WANTED. — By the Borough of Stepney, for a supply of stationery; particulars from the Town Clerk, 15, Great Alie-street, Whitechapel, E. For the supply of school stationery, text books, etc., and kindergarten materials, office stationery, printing, etc, printing and supply of minutes, for the Wakefield Education Committee; particulars from Mr. P. Glover, Education Department, Town Hall, Wakefield. For the supply of stationery, books and apparatus, etc., needlework materials, kindergarten materials, etc., for the Bedfordshire County Council Education Committee; forms of tender from the office of the Director of Education, Shire Hall, Bedford. For printing and stationery required in the several departments of the Corporation of Oxford for two years; schedules and particulars from the Town Clerk's Office, Town Hall, Oxford. For the supply of books, stationery, printing, etc., for the Merthyr Tydfil Town Council; specification and form of tender from the Borough Controller, Town Hall, Merthyr Tydfil.

THE death has occurred of Mr. David C. Coghill, nephew of Mr. William C. Coghill, of Messrs. Aird and Coghill, printers, one of founders of the old-established firm. The late Mr. Coghill was actively engaged in the business, and was well-known in the printing trade in Scotland.

ACCORDING to *Kemp's Mercantile Gazette* there were five failures in the printing and stationery trades of England and Wales for the week ending Friday, December 5th; the corresponding week in 1912 showed two.

WE regret to have to announce the death of Mr. Henry Lane, the second son of Charles Lane, a well-known commercial journalist in his day. Mr. Henry Lane, like his father, was at one time connected with the *Public Ledger*, and was a familiar figure in Mincing-lane.

A COMPLIMENTARY dinner was given the other evening at the Savoy Hotel by the Newspaper Proprietors' Association to Mr. Ernest Parke on his retirement from the position of honorary secretary of the Association, when the chairman (the Hon. H. L. W. Lawson, M.P.) presented him with a service of plate on behalf of the members, as a token of personal esteem and gratitude for his services to the Association during the past seven years, and to the Press generally.

H.M. TRADE COMMISSIONER FOR SOUTH AFRICA reports that tenders are invited by the Union Department of Posts and Telegraphs for the supply, during the period April 1st, 1914, to March 31st, 1917, of 85,000 lbs. of sealing wax. Sealed tenders will be received by the Chairman of the Tender Board, P.O. Box 371, Pretoria, up to noon on January 21st, 1914. Samples of the articles required may be seen at the office of the High Commissioner for the Union of South Africa, 32, Victoria-street, S.W., where also further particulars may be obtained.

TENDERS ACCEPTED. — For the supply of books, stationery, apparatus, kindergarten materials, etc., for the Middlesbrough Education Committee; E. J. Arnold and Son, Ltd., Hunslet-lane, Leeds; Ridsdale and Robertson, Linthorpe-road, Middlesbrough. For the hire of punches and supply of tickets for three years for the Walsall Corporation; Bell Punch and Printing Co., Ltd. For the supply of books, stationery, apparatus, kindergarten, sewing materials, etc., for the Macclesfield Education Committee; E. J. Arnold and Son, Ltd., Leeds (recommended for acceptance).

MR. A. JOSEPH, Earl-street, London-road, Southwark, S.E., the well-known paper stock merchant, is sending out to his business friends a very neat loose-leaf memorandum book, which should be much appreciated by the recipients. It is $4\frac{1}{4}$ by $3\frac{1}{8}$ inches in size, and is charmingly bound in soft-lined leather, Mr. Joseph's various announcements being neatly and unobtrusively blocked in small gold letters on the inner sides. The inset is on the loose-leaf principle, and may be added to or reduced at will. The tasteful get-up and finish will appeal to those who receive it, while it will serve to keep Mr. Joseph's business before his customers.

MR. E. FORDER, of Messrs. Strong, Hanbury and Co., Ltd., has just been presented with the Royal Humane Society's Vellum for gallantly saving the life of a boy about 12 years old while on holiday at Great Yarmouth in August last. He was on the end of the pier when his attention was drawn to the boy by people shouting for assistance. The nearest boat was quite 50 yards away, and the boy sinking. Without a moment's hesitation Mr. Forder jumped in, fully dressed, and swam with the boy to the beach. Artificial respiration was applied, and the boy recovered consciousness. Mr. Forder was invited by the Mayor of Great Yarmouth to have the certificate publicly presented there, but he was unfortunately unable to accept the invitation.

IN the current issue of the *Monotype Recorder* there are some striking examples of what may be done in the way of intricate and general composition by means of that versatile machine. Among these are specimens of newspaper small advertisements with two-line initials, and an inset in which the artistic display, including borders, has been done on the Monotype. Some tabular work of a complicated character is also shown, and the first of a series of articles on "Tabular Composition on the Monotype," in which practical instructions which will be given to operators, appears. This series of articles should be most helpful, in showing how the most complicated work may be done almost as easily as ordinary composition. The whole of the contents of the issue are most interesting, and printers interested in mechanical composition should make a point of securing regularly copies of the *Recorder*.

SEVERAL of the Preston newspaper reporters, who, to a man, are members of the National Union of Journalists, went on strike on Monday night and refused to report a meeting addressed by Mr. James Larkin. The reason for this action was that the organisers of the meeting had advertised that only union journalists showing their union card would be admitted. The local branch of the N.U.J. met on Saturday, and declared that they were no party to the arrangement, and that neither they nor the national executive had been consulted. They wrote to the organisers of the meeting informing them that every reporter in the town was a union man, but they would not be dictated to. The result was that all the reporters' seats were empty.

THE three principal editors of the Finnish journal, *Viborgs Nyheter*, have been ordered by the commander of Viborg fortress to leave the town within three days on account of articles published by the newspaper.

THE Vienna printers are demanding a reduction in their hours and an increase of pay. Those receiving a weekly minimum of 20s. desire an increase of twenty pence. The masters rejected these demands, and a number of them have given the men a fortnight's notice.

TO MEET the convenience of printers in the West of England and South Wales who have so far been unable to see the exhibit of machinery which Linotype and Machinery, Ltd., have arranged at Star Assurance-buildings, Tramway Centre, Bristol, the show-rooms will remain open until December 13th.

Printers' Managers and Overseers ASSOCIATION.

DUBLIN CENTRE.

The Continuous Cylinder, Two-Revolution and Drum Cylinder—Some Difficulties, Mechanical and Technical—How Overcome, and Reasons Why.

At the invitation of the Dublin Centre of the P.M. and O.A. a lecture on the above was given at the Clarence Hotel the other day by Mr. John Geddes (of John Haddon and Co.).

At the outset the lecturer said that he did not purpose giving a formal lecture, but rather a talk on the question of the Continuous Cylinder Machine. Whilst the stop cylinder, especially with modern improvements, could produce the finest possible class of work, there were mechanical and technical reasons why it could never give speed nor quality of output. The limitation of the stopping cylinder with brake and push home, the varying bed-motion with long dead-centres, the disadvantage of underneath feed, and rising and falling layboard, also the question of inking and impression were fully dealt with.

The lecturer claimed that the question of improved machinery was vital to the printing trade, especially to managers who were responsible for the earning capacity of their offices, and particularly so in the printing trade, owing to the high percentage of labour cost in the finished product, and the fact that whilst in other trades the tendency was for machinery to be automatic and capable of operation by unskilled labour, printing machinery improvements demanded higher skill from the operator, and better management to secure that economy of efficiency which modern conditions demanded.

The Two-Revolution Machine.—The first two-revolution of 1817 was described, also why it had been superseded by the stop-cylinder, till the advent of the improved bed-motion of the original Miehle. The problem and importance of the bed-motion to the continuous cylinder was then dealt with. The Miehle, old and new motions, the Cottrell, the Century and the Optimus "ball-and-socket" universal, were fully described. The technical value of the equal bed travel—especially applied to impression speed—the value of the dead centres, and the utilisation of the momentum of the bed, were made exceptionally clear.

Top Feed.—The technical value of this, which meant that the sheet was round the cylinder *before* printing commenced, and the stationary feed board gave greater facility to the feeder and made it possible to more than double the output with the necessary exactness.

Cylinder Lift.—The problem of impression, strength and rigidity presented by this was next dealt with, while the value of the "eccentric" system of the Century and Optimus, compared to the rod-and-toggle of the Miehle, was made clear.

Impression.—The lecturer laid special stress on the importance of the cylinder, also underneath impression support. He claimed that owing to wear many printers habitually overpacked their cylinders, which in addition to altering the relation of the speed of the cylinder to the speed of the bed, caused a tendency to extra wear of blocks and to slur.

Digitized by Google

and meant that the cylinder was forced off the bearers at the impression, which of course shortened the life of the form. The lecturer quoted a high authority in America who asserted that 99 out of 100 pressmen in the States over-packed their cylinders, so that this was a technical proposition worthy of attention. On this point the engineer could and did help considerably. He had seen a double crown German machine with five bowl-rails; to-day the general custom was to fit four bowl-rails. This, of course, was an improvement, but was not perfect mechanically; as in actual practice the centre bowl-tracks now move more quickly than the outside ones for two reasons:—1st, whenever a small job was placed on the machine, which was a frequent occurrence, it was naturally placed in the centre of machine, resulting in extra wear on the middle tracks, also the centre tracks being further from the frame side supports naturally wear more quickly. It was quite possible to exagerate the effect of this, and the printer could not be expected to consider the wear with the micrometer guage of the engineer, but at least one large firm of printers had their beds and bowl-rails planed and packed every seven years.

The importance of the centre girt was dealt with—the difficulty of having sufficient strength under centre of impression owing to having to allow the clearance of the spur wheels and rack of the wharfedale, the strengthening of this girt which the new Miehle motion permitted and the full strength allowed by the Optimus system owing to their rack being at one side (the real centre of load) were fully demonstrated. The system of bowls instead of rails giving three times the impression support, also the semi-automatic system of adjustment to take up wear—provided by the Babcock—despite the fact of their extra strength in construction, was claimed to be the nearest to perfection attainable.

The lecturer pressed home the importance of impression rigidity, for if the impression was not rigid it meant that the printer had to use extra impression to get equivalent results, attaining this by technically incorrect methods—principally over-packing of cylinder. The injurious effect of this would be, and was, minimised by running more slowly, but it was the business of the practical printer to demand from the engineer the highest mechanical efficiency not only to save time, but to enable him to produce the best class work at the highest possible speed.

Rolling.—The lecturer stated that the highest efficiency of the form rollers was when their peripheral speed was slightly in advance of the form. To ensure this the equal bed speed of the continuous cylinder was essential; this was again a case where efficiency could be attained by running "slower," but "speed" demanded a higher mechanical and technical efficiency, just as every extra knot per hour on an ocean liner demanded a greater ratio of engine power.

The lecturer claimed that the ideal of the printing machine must be smoothness of running, rigidity of impression, efficiency in inking and distribution, delivery of sheet including provision for interleaving. In all these the continuous cylinder, because of its mechanical and technical superiority, was more efficient than the stop cylinder.

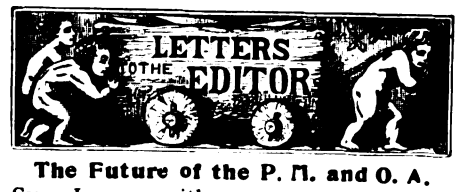
The drum cylinder was then dealt with, also the necessity and advantage of the shorter stroke; the problem of bed motion, especially owing to the necessity of reversing the cylinder, and the increased underneath impression-support owing to the heavy cylinder; and the decided advantage of the pyramidal roller system of inking rollers enabling the distribution to be all that could be desired. The lecturer regarded this machine as the most important for the general printer, as owing to the necessarily high cost of the two-revolution, it was too expensive for general jobbing and short run work; the drum cylinder was the simplest possible machine. The application of power, the mechanical efficiency of the continuous cylinder (obviating the complication of the cylinder lift of the two-revolution), the utilization of the momentum of bed, the equal speed of bed traverse, the top feed and stationary board, have all the advantages of the two-revolution. In addition, the simplicity of the drum cylinder as compared with either the Wharfedale or two-revolution, in that it economises space, power and ink, the facilities for quick make-ready, and its ability to be more readily got running than any other machine, make it easily *the* machine for general jobbing work. In this connection the lecturer pointed out the necessity of accuracy of construction, which was more important than in the Wharfedale, as the latter had the push-home to compensate for the inaccuracy of back-lash in gear.

In conclusion, the lecturer said that the object of this talk was to bring before his audience the various points to look at in inspecting a machine, just as a man buying a horse looks for definite points. He appealed to all practical men to investigate and criticise the claims of the engineer more, as the engineer could only progress by practical experience of working conditions. In this connection he felt sometimes that there was too much of the engineer wanting the printer to look at something better, instead of the printer demanding something better from the engineer. The lecturer illustrated his various points by drawings and lantern slides, remarking that there was plenty of room for discussion, and invited criticism on the developments as described.

The chairman (Mr. Grigson), after testifying his appreciation of the lecture, opened the discussion.

Mr. Rignall said that the lecturer had left very little to be said, as all the points had been so thoroughly dealt with.

Mr. Beaven said that while he noticed no great difference in the quality of work produced by the stop cylinder and the continuous cylinder, asked further explanation of the Optimus compensating device on impression bowls. The lecturer pointed out that he admitted quite frankly that the best work could be, and was, produced every day on the Wharfedale, but that the continuous cylinder enabled the printer to produce far more per hour, and that of the highest class.



The hon. sec. mentioned the satisfactory experience he had with the drum cylinders, both as regards the extra output, the quick make-ready, the ease of feeding, and the efficiency of inking. He mentioned that the heavy wear of the composition rollers working between the steel vibrators had been overcome by the substitution of leather ones similar to litho, and that their introduction had helped considerably in the distribution by breaking up the ink more thoroughly. The lecturer mentioned that this roller question had been overcome by using a special composition, and advised that such should be used if possible.

After further discussion, the meeting concluded with a vote of thanks to the lecturer.

Printers' Rifle League.

Mr. C. W. Shortt (of Linotype and Machinery, Lfd.), the President for the year of the Printers' Rifle League, speaking the other evening, at the Pillar Hall, Victoria Station, at the annual presentation of prizes, which were presented by Mrs. Shortt, said, in the course of an interesting speech, that the object of the Printers' Rifle Association (which was founded in 1910) is to form rifle clubs in connection with printing offices and to make the employees take their place in the defence of their country in first learning the use of the rifle and the rudiments of rifle shooting. The Rifle League during the first season consisted of 12 teams, but the following year twenty-four entered the competition, so the League was divided into two sections, the first and second division of twelve teams each. The League is run on similar lines to the Football Association—the lowest two teams at the end of each season in the first division retiring to the second division for the following season, the two at the top of the second division taking their place. He hoped that to the list of clubs soon would be added the Linotype Club, since, so soon as some of the members of the staff of that company learned that he had been asked to take an interest in the Printers' Rifle League by becoming President for the year, they quickly formed the nucleus of a healthy and active club, which already numbers some 35 members, but which club nearly came to grief at its inception owing to the difficulties encountered in finding a range. Notwithstanding the opening of the new Blackfriars Range, which range by arrangement can be used by some of the City miniature rifle clubs, there are still many clubs that cannot find shooting accommodation. Accordingly on behalf of the League he appealed to the Press to help them to obtain, if possible, better accommodation. Failing another public-spirited man like Sir Robert Lucas Tooth, surely the Local Borough Councils could find some piece of waste ground on which could be erected at merely nominal cost to the ratepayers a miniature range in each district.

THE calendar of Messrs. Ch. Lorilleux and Co., the well-known French makers of printing inks, is in the usual handsome style with which we have been familiar in previous years. On an embossed floral design, printed in colours, the firm's announcement appears on gold bands, the large daily tear-off date slips having bold red figures, while on each slip is given particulars of early French newspapers, the whole forming a brief but excellent history of the newspaper press in France. Well printed and attractive in appearance it will be a useful accessory to the office.

The Future of the P. M. and O. A.

SIR,—I agree with our esteemed secretary, Mr. E. C. Moyce, that the above question had better not be discussed through the Press. Let there be no misunderstanding—there is no quarrel going on between the Parent and its offspring. In my letters to you I have purposely avoided details. Yet this publicity has been required to elicit the fact that the suggestion for a National Council was considered by the New Rules Committee. That might have been mentioned earlier. However, I have not yet found the Parent Centre unwilling to listen to argument.

Yours, etc.,
THOS. SHAW.

Manchester,
Dec. 8th, 1913.

THE London office of the *Sydney Morning Herald*, 40, King-street, Cheapside, E.C., has issued the annual time tables of the Australian and New Zealand mails for 1914, covering the whole of the services between Europe and Australasia, and containing full information of postal and cable rates in a handy form for the pocket. Copies may be obtained gratis from the address given.

SCREENS Our "Diamond" Screens for Process Engravers are the best and cheapest high-grade, permanently engraved Screens. In competition with others, they have been chosen by the principal Process Houses. We are actual makers with more than 20 years experience and our prices are lower than others because we sell from our factory to you direct.

TENDERS WANTED.

TO PRINTERS.

THE WANDSWORTH BOROUGH COUNCIL is prepared to receive TENDERS for the General PRINTING from 31st March next.

Form of tender and specification may be obtained, and form of contract seen at these offices, between the hours of ten a.m. and four p.m. (Saturdays ten till one).

Contractors will be required in the case of all workmen employed by them in and about the execution of the contract to pay wages at not less, and observe hours of labour not greater than the rates and hours recognised by the associations of employers and employees, and in practice obtained in the district where the work is to be executed, and to pay all carmen a wage of not less than 4s. 6d. per day.

The contract will contain a general strike clause.

Tenders, each enclosed in a separate envelope, and endorsed "Tender for Printing," are to be delivered at the Council House, East Hill, Wandsworth, S.W., and may be placed by the person tendering in the tender box provided for the purpose not later than TEN o'clock in the FORENOON of THURSDAY, 1ST JANUARY next. No tender will be received unless it is made upon one of the printed forms issued for the purpose from these offices. The Council does not bind itself to accept the lowest or any tender.

D. A. NICHOLL,
Town Clerk.

Council House, Wandsworth, S.W.
4th December, 1913. 14253

Industrial Unrest.

THE present position in the industrial world is viewed with grave apprehension by those thoughtful people who endeavour to look under the surface of things and try to find remedies for existing grievances. Truth to tell, the times are out of joint, and the threatened and actual warfare between capital and labour is to-day a most disturbing influence on business transactions, for in no trade do the relations of masters and men seem satisfactory. There are all sorts of disturbing factors, questions of hours and wages, recognition of trade unions, workshop conditions, the "open shop," and other questions, any or all of which may, if not settled in a conciliatory spirit, precipitate a cessation of work, or raise trouble in some form or other. During the past year industrial unrest has been exemplified by the narrowly averted lock-out of the Lancashire cotton operatives, then we had the Cornish clay workers' dispute, followed by the still unsettled Dublin strikes of transport workers and others. To-day we have a chair-makers' strike at High Wycombe, and in our own section of labour there is a serious dispute with the operative bookbinders of Scotland, and also in one of the largest London bookbinding houses, while in various towns in the provinces strikes in the printing trade have only been averted by the granting of the whole or a part of the men's demands. There is a wide and deep discontent among the workers in nearly every section of industry; it is the old story intensified. Labour seeking to wrest more from Capital, Capital seeking to purchase Labour at the lowest price, and such a state of affairs does not make for stability in the industrial world. Labour and Capital both have their rights, but both also have their duties, and war between the two is regrettable. A spirit of tolerance, tempered by commonsense, and a desire for conciliation on both sides, should tend to the settling of most trade disputes. The arbitrament of the strike or lock-out should never be resorted to until every other available method has been tried, for the employers or labour leaders who precipitate industrial war saddle themselves with a responsibility that should not be lightly undertaken.

* * *

Technical Training.

THE work which the Department of Technology associated with the City and Guilds of London Institute is doing for the printing trade and other industries, must appeal for admiration from all right-thinking people, who are interested in the advancement of the rising generation. It will be readily conceded that the practical printer, having a good technical training, is much better fitted to grapple with the problems of his business than one content with rule of-thumb methods. Therefore the younger members of the trade should be urged to take full advantage of the facilities offered them to obtain instruction to fit them for technological examinations. The latter is one of the greatest aids to education when rightly handled, and that is one of the reasons why we would like to see a larger percentage of students presenting themselves every year to deal with the questions set by examiners appointed by the City and Guilds of London Institute. Master printers, in many instances, have given facilities to their employees to obtain a thorough technical training, and the questions on printing put before the students at the last examinations conducted under the auspices of the Department of Technology, serve the useful purpose of keeping a student "up to the mark." Technical education, combined with practical knowledge, is an excellent means of intellectual training, and that is what an industry like ours requires. We want learned and skilful people to keep it going as captains, and such people are generally in possession of a wide culture, because they as a rule study the economic question as well as other principles on which business is founded and conducted. Therefore, the Department of Technology associated with the City and Guilds of London Institute is doing a noble work, and deserves every support.

The Scottish Bookbinders' Strike.

As stated in our issue of last week, a conference was held at Glasgow between representatives of the Scottish Alliance of Masters in the Printing and Kindred Trades on the one side, and representatives of the Printing and Kindred Trades' Federation of the United Kingdom and delegates from the National Union of Bookbinders and Machine Rulers on the other side. Mr. James MacLehose presided. After a sitting that lasted from eleven o'clock in the forenoon till five o'clock in the evening no agreement was reached. Afterwards an official statement was made to the Press from which it appeared that the following proposals were submitted by the employers and were not accepted by the men:—

The Scottish Alliance of Masters in the Printing and Kindred Trades having given the fullest consideration to the memorial of the National Union of Bookbinders and Machine Rulers, dated April 8th, 1913, and having had also three long conferences with representatives of the union on the subject, declined, as they have already declined, to accept the principles contained in this memorial or the principle on which they are based. The employers are satisfied that

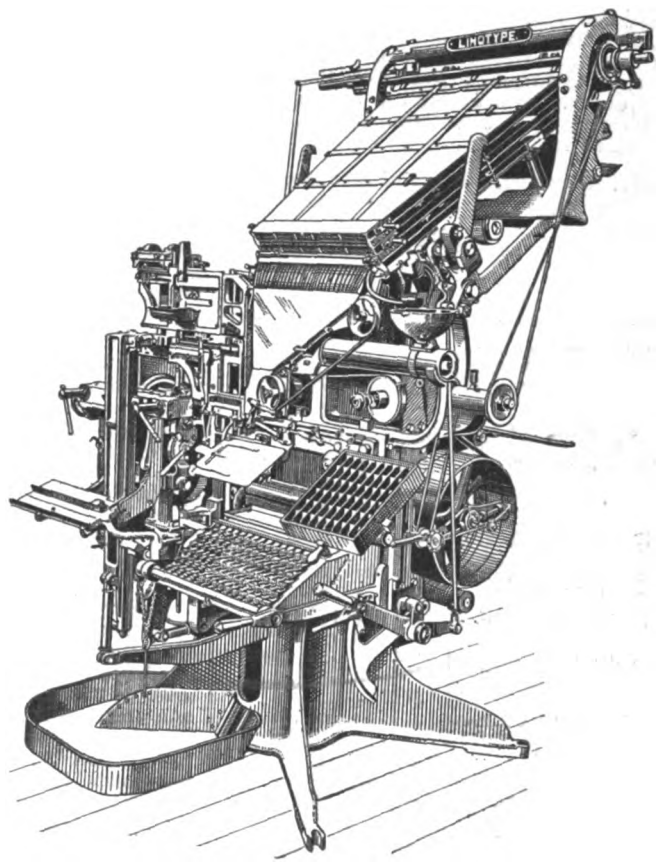
Digitized by Google

if they did so they would be allowing injustice to be done to classes of workpeople who for many years had shown that they could satisfactorily perform the work, and so strongly do they feel that if they had accepted the memorial they would have been injuring the trade in Scotland and the interests of those employed in it that they have with remarkable unanimity at a busy season of the year preferred to suffer the inconvenience and loss caused by the strike rather than give way to the demands of the union. From the outset the employers made it clear that they are entirely opposed to a hard and fast line of uniform demarcation being drawn for the various classes and work done in different parts of the country for various markets under widely differing conditions, and to this they adhere. They have also made it clear that they are ready to consider any grievance, if such can be shown to exist, and if this memorial is withdrawn and the strike ended, the employers are prepared to appoint a conference forthwith to consider with representatives of the Bookbinders' Union any points to which either the employer or employed may desire to bring forward.

The following proposal was submitted by the men's representatives and declined by the employers:—

That a committee of six representatives be appointed (three from the Scottish Alliance of Masters and three from the Bookbinders' Union), with an independent chairman, for the purpose of inquiring into the questions affecting the present dispute, and that this committee be instructed to submit recommendations to this conference at a resumed meeting on Monday, December 8th; that the appointment of this committee has not to be taken as in any way a deviation from the present position of either party to this conference.

It is likely that one result of the conference will be an attempt by the men now on strike to enlist the active sympathy of the workmen in the kindred trades, and it is rumoured that the Scottish District Council of the Bookbinders' Union are corresponding with the Federation with a view to having a sympathetic strike in order to compel the employers to concede their demands. It has come to the knowledge of the men that work is being sent from Glasgow to England. At present they are unable to trace definitely the firms who are executing these orders, but when they succeed in doing so they intend to take immediate action to prevent it.



At a meeting of the employers held at Glasgow, on Friday, the following resolution was unanimously carried:—

"This meeting of the employers in the bookbinding and machine-ruling trade in Glasgow adheres to the position previously taken up, and regrets that at the recent conference the representatives of the men did not accept the proposals of the employers, which seemed to afford a fair prospect of the restoration of the satisfactory relations which both sides desire to see re-established."

MR. FRANCIS WILDE, the well-known motorist and motor journalist, has died at the Middlesex Hospital, London, as the result of injuries sustained in a motor accident on Saturday.

Financial.

Offices of the *British and Colonial Printer and Stationer*,
58, SHOE LANE, LONDON, E.C.
WEDNESDAY, Dec. 10th, 1913.

AFTER liquidating a fairly large sum due for repayment at the Bank of England last Thursday, and further sums on Friday, the market has still remained with a plentiful supply of credit, and rates are easy, both for loans and discounts. More bar gold has been bought by the Bank this week, and the net influx to date is £217,000. Stock markets were chiefly occupied with the carry-over in the general sections yesterday, and business was mostly sluggish. The gilt-edged section continues dull, and Consols have declined, the quotations being 71⅞ to 71¾ for money, and 71⅞ to 72 for the account.

Business continues restricted in the miscellaneous industrial market, and the tendency has been irregular. Movements have occurred both ways in the section relating to paper and print. Amalgamated Press Ord. have fallen ⅛, and *Illustrated London News* and *Sketch* Ord. are down 1/32, while the Deb. of the latter are up 2, and Linotype and Machinery B Deb. have risen 1. Business has been done during the past seven days in Associated Newspapers Pref. at 20s. 6d. and 20s; in Cassell and Co. at 5 5/16; in *Daily Express* Deb. at 60; in Ilford Ord. at 12s. xd., and in the Pref. at 17s. 9d. and 17s. 6d.; in *Illustrated London News* and *Sketch* Ord. at 3s.; in International Linotype at 72½; in Kelly's Directories Pref. at 9¾; in Lanston Monotype Corporation at 10s. 3d.; in Linotype and Machinery A Deb. at 61¾, 62 and 58¼, and in the B Deb. at 42, 42 and 38¼; in Edward Lloyd Pref. at 22s. 6d., 22s. 3d., and acc. 22s. 6d.; in George Newnes Pref. at 16s. 6d.; in Raphael Tuck and Sons Ord. at 17s. 6d. and 17s.; in Waterlow Brothers and Layton Ord. at 6, and in the Pref. at 6½; and in Weldons Ord. at 30s. and 30s. 3d., and in the Pref. at 20s. 3d.

DIVIDENDS AND REPORTS.

THE report of the Lanston Monotype Corporation, Ltd., for the year ended September 30th last, states that there has been an increase in the business done both at home and abroad during the period, and the profit, after payment of the debenture interest, etc., is £44,276. After adding the balance brought forward, and deducting the interim dividend, and making further provision for deferred profits, there is a balance of £53,714. Of this amount the Board recommends a further dividend of 2½ per cent. for the last six months (making 5 per cent. for the year), and that £25,000 be added to the reserve account (making the total £100,000), and the balance of £24,026 be carried forward. The cost of upkeep of plant and buildings has been charged to revenue, and, in addition, £3,000 has been written off the value of the plant, machinery, etc.

WATERLOW BROTHERS AND LAYTON.—A dividend of 5 per cent. on the ordinary shares, placing £2,500 to reserve—both the same as last year.

THE accounts of the Argus Printing Co., Ltd., for the year ended October 31st. show a net profit, including £3,503 brought forward, of £16,710. The directors recommend a further dividend of 2½ per cent., making 5 per cent. for the year. It is proposed to transfer £4,000 to reserve (making it £10,000), and, after writing £4,000 off goodwill, the sum of £3,841 remains to be carried forward.

NEW COMPANIES.

PROGRESS MACHINE CO., LTD.—Registered with a capital of £500, in £1 shares, to carry on the business of ironfounders, engineers, manufacturers of and dealers in machinery for use in the textile, agricultural or other industries, tool makers, brassfounders, etc. Private company. F. Rosskothen is the first permanent governing director and chairman.

NOTICE OF INTENDED DIVIDEND.

WHITE, M. R. L., 44, Bedford-row, London, W.C., lately carrying on business at 145, North End, Croydon, publisher. Claims by January 1st, to G. C. Hunter, 59-60, Old Bailey, E.C.

NOTICES OF DIVIDENDS.

HENDERSON, S. J. C., and SMITH, J. W., trading as S. J. C. Henderson and Co., at 22 and 24, Cleethorpe-road, Great Grimsby, newspaper proprietors and printers. First and final dividend of 1s. 5½d., December 10th, at the official receiver's offices, St. Mary's Chambers, Grimsby, where also on the same date a first and final dividend of 20s. will be paid in respect of the separate estate of S. J. C. Henderson.

TATCHELL, C. J., 171-172, Snargate-street, Dover, stationer, etc. Supplemental dividend of 4½d., December 13th, at the official receiver's offices, 68, Castle-street, Canterbury.

AVERY, A. H., Market-place, Fordingbridge, Hants, stationer, etc. First and final dividend of 3s. 0¾d., December 11th, at the official receiver's office, City-chambers, Catherine-street, Salisbury.

APPOINTMENT OF TRUSTEE.

VICK, H., ASHWORTH, A. and F., and PEARCE, W., trading as Vick, Ashworth and Co., at Dean-road, Salford, and 28, Kennedy-street, Manchester, general printers. Trustees, J. P. Garnett, C.A., 61, Brown-street, Manchester, and A. Willmott, C.A., 14, Old Jewry chambers, London, E.C. Appointed December 1st.

NOTICE OF RELEASE OF TRUSTEE.

BOSWALL, T. R. H., 2 and 3, Norfolk-street, Strand, London, W.C., advertising contractor. Trustee, F. S. Salaman, C.A., 1-2, Bucklersbury, Cheapside, E.C. Released October 21st.

THE COMPANIES ACTS, 1890 AND 1908.
WINDING-UP ORDER.

THE YORKSHIRE PRINTING CO., LTD., Hull-road, York. Date of order, December 2nd. First meeting of creditors, January 5th, 3 p.m., and of contributories, same day, 3.30 p.m., both at the official receiver's office, The Red House, Duncombe-place, York.

"PENROSE'S PICTORIAL ANNUAL" (The "Process Year Book,") edited by William Gamble. London: Percy Lund, Humphries and Co., Ltd., and at Bradford.

This wonderful annual is in the current edition better than ever, and the quality of its illustrations is of a very high character, every possible phase of photo-mechanical illustration being dealt with, from line to half-tones in colour, and including photogravure, on which latter process there is an exhaustive treatise by the editor in which he reviews the progress of the art up to the present, and especially in its bearing on newspaper and other illustration. Some remarkably fine examples of photogravure illustrate this article. Offset printing is also dealt with and examples given, while process work generally is well represented in its many phases by articles and illustrations. Among the contributors are many whose names carry weight in the art world, and every expert in the process business seems to figure in the book either by his pen or by specimens of his work. The "Process Year Book" is a volume that no one connected with the illustrative art can afford to be without, be he artist, engraver or printer, and its many pages of beautiful pictures make it a valuable book of reference. The frontispiece, a picture of Chartres Cathedral, is an extremely fine specimen of photogravure, reproduced from a painting by F. A. W. T. Armstrong, R.W.A. As an example of fine printing the book takes a high place, and it is interesting to note that the type used throughout the text has been cast from Monotype metal supplied by Messrs. T. G. and J. Jubb, Hunslet, Leeds; the paper has been made by Messrs. John Dickinson and Co., Ltd., and Messrs. L. S. Dixon and Co., Ltd.; Messrs. Shackell, Edwards and Co. have supplied the inks, and the printing has been done by Messrs. Percy Lund, Humphries and Co., of Bradford and London.

Tariff Changes
AND
CUSTOMS REGULATIONS

(From the "Board of Trade Journal.")

NEW ZEALAND.

It is announced that plush covers for the rollers of bronzing machines are dutiable under No. 106 of the Tariff, at 15 per cent. *ad valorem*, or 5 per cent. if British. Printed cardboard tickets, with holes punched therein for string, are dutiable under No. 243, at 30 per cent. *ad valorem*, or 20 per cent. if British. Paper used in the manufacture of chocolate confectionery, and embossed with a name, is admitted free.

UNION OF SOUTH AFRICA.

Foreign stamp catalogues, such as Stanley Gibbon's, are admitted free of duty.

FRANCE.

It has been decided that imitations of linoleum and oilcloth on cardboard (cardboard furnished with a simple coating with oil base, and coloured or printed) are dutiable as "cardboard, cut, coloured, varnished, etc.," according to kind.

Rollers or tubes of cardboard, or of cardboard and wood, paper, or coarse tissue, round which linoleum, tissues, oilcloths, etc., are wound on importation, are considered to be merely packing without marketable value.

AUSTRALIAN COMMONWEALTH.

A recent Supplement to the Customs Tariff Guide contains the following decisions with regard to the application of the Import Tariff:—

Articles.	No. of Tariff Heading.	Rates of Import Duty. Under the General Tariff.	Under the United Kingdom Preferential Tariff.
Bags, baskets, boxes, etc.—Cigar box, fancy, containing cigars	387 (B)	30% ad val.	25% ad val.
Balloons, toy, rubber, bearing the name of a firm, are considered to be of an advertising character ...	389	30% "	25% "
Films—Kinematograph, toy ... ... [These are not manufactured by photographic process, but are merely printed.]	326	25% "	20% "
Paper— Millboards in sizes 17¼ in. by 14¼ in. and 20¼ in. by 13 in.	356 (B)	5% "	Free
Tissue, striped wax (confectionery wrapping) if conforming to the requirements of the Tariff as to weight, etc.)	356 (CC)	Free	Free
Tissue, striped wax	356 I (1)	Per cwt. 5s.	Per cwt. 4s. 6d.
Pens—Fountain pen in wooden box covered with leatherette (paper) and lined with plush and silk. The name of the maker and the article is printed on the silk inside the box ...	364 (B) (1)	30% ad val.	25% ad val.

SPECIAL PREPAID ADVERTISEMENTS.

SITUATIONS.—Charges for Advertisements under the headings "Situations Vacant," or "Situations Wanted," are at the rate of

ONE SHILLING FOR 24 WORDS

(3 Insertions: TWO SHILLINGS),

and Fourpence for each additional Eight Words. Minimum Charge, One Shilling.

STONHILL & GILLIS, 58, Shoe Lane, London, E.C.

Machinery and Plant for Sale.

ALL ELECTROTYPERS and STEREOTYPERS should write H. Williams and Co. for their latest catalogue of machinery, and Electroline Enamel Paste, for producing fine art stereos. —Engineers, Red Lion Works, Warner-street, Rosebery-avenue, E.C. 12343

Machinery Wanted.

QUAD CROWN FLAT-BED LITHO MACHINE, by Mann, with Fliers, wanted; must be in first-class condition.—Address, No. 13292, Office of the BRITISH AND COLONIAL PRINTER AND STATIONER, 58, Shoe-lane, London, E.C. 13292

Miscellaneous.

TO PRINTERS.—For Sale, cheap, several large Body Founts of new Type, 8-point to 12-point in both O.S. and Modern Faces; portion very slightly used and remainder in founders' packets; specimens and weights on application.—Spottiswoode and Co., Ltd., 5, New-street-square, London, E.C. 13265

TO PRINTERS, PUBLISHERS and ALLIED TRADES.—TO BE LET, as a whole or in Sections, an important Block of Buildings covering an Island Site conveniently situated close to Fleet Street. They contain four well-lighted upper rooms with lofty basement. Total floor space, 12,625 sq. ft.—Rent and further particulars of Messrs. Farebrother, Ellis and Co., 29, Fleet-street, E.C. 13264

Waterlow Brothers and Layton, Ltd.

A Successful Gathering of the Staffs and Friends.

(Special to the *British and Colonial Printer and Stationer*.)

Pre-eminent as the position is that Messrs. Waterlow Brothers and Layton, Ltd., occupy in the British industry of printing and bookmaking, everything now points to the fact that on the social side of our age they are going to build up a reputation of no mean order in the musical world. The success of an undertaking, of course, largely depends on the amount of interest that can be infused into it, and it is well-known that when Messrs. Waterlow Brothers and Layton, Ltd., or their employees, give their attention to any object the results are, as a rule, commendable and praiseworthy. Therefore, it was not surprising to those who had the pleasure of attending the annual smoking concert, promoted for the enjoyment of the staffs of the firm's three City branches, which was held in the Pillar Hall, Cannon-street Hotel, on Thursday night in last week, to see a first-class entertainment arranged, and a spirit of good comradeship and good fellowship pervading the social function between superiors and subordinates. A more ideal "Smoker" could not be desired. The minutest details received the most careful attention of a good business committee, and a varied and pleasing programme—also, another fine specimen of the firm's art printing—included artistes from outside as well as from inside, and from an exhibition of specimens of the firm's artists' brush work in colour to the charms of the violinist and the the "warbling" or the *sifflеur*. Needless to say, a happy time was spent. Mr. Arthur Elson (secretary to the firm) presided, and during the evening the proceedings were patronised by Mr. Reyne, chairman of the company, Mr. M. Waterlow (Barrister-at-Law), Mr. de Freyne (of the Bank of England), Mr. Sweetman, Mr. Seymour Bennett (Somerset House Stamping Department), Mr. A. G. Gronow (general-manager of Messrs. Waterlow Brothers and Layton, Ltd.), Mr. Charles Pain (the well-known yachting man), Mr. Smith, Mr. Eades (one of the oldest managers in the firm), and others too numerous to mention.

The programme was opened with the overture, "Rendez Vous" (Aleter), by the accompanist of the evening, Mr. Ernest Roe, which was skilfully executed. Mr. Herbert Richards, the possessor of a nice baritone, sang in martial style "So you want to be a Soldier Little Man" (Trotère), and in response to an imperative encore rendered "Shipmates." Miss Agnes Orrell was successful in her song, "The Venetian Carnival" (Brontë), and Mr. William Vincent's tenor voice did full justice to "Like Stars Above" (Squire). Miss Edith Eatherly caused a good deal of merriment with her musical country sketch, "Oh! How Ashamed I Was," and she had to reappear a second time in response to loud applause. The humorous element was capital in the hands of Mr. Wilson Martell and Mr. George Roberts, two well-known City favourites, and their "turns" convulsed the audience at times into roars of laughter. Their stories and musical abilities whiled away a most pleasant time. As an extra item Mr. A. G. Gronow was introduced and the demonstrations of applause that greeted the general-manager testified that his popularity was more than a superficial one. He had to give two songs—the second one as an encore—and his vocal efforts were greaty appreciated and admired.

"The Visitors."

There was a slight break in the first part of the programme to enable the Chairman to propose the health of "The Visitors." He said that no better board of directors existed in London to-day than that of Waterlow Brothers and Layton, Ltd.—(applause)—and to their friends and customers there that night, in addition to the directors, he extended most hearty thanks for coming to that gathering. He hoped they would all have a very pleasant evening, and he coupled with the toast the name of their worthy chairman of the company, Mr. Reyner, and their charming and valued friend, Mr. Seymour Bennett. (Loud applause.)

The company rose and sang "For they're jolly good fellows."

Mr. REYNER, in reply, said it was very seldom he had the pleasure of responding to a toast at a meeting of that description. He felt himself somewhat at a disadvantage in doing so, but all the same he begged to thank them one and all for the very hearty way in which they had received the toast and for the kind invitation extended to the directors and the other gentlemen present. When he received the invitation he said to the chairman, "I am very sorry, indeed, but I never go out two nights in succession, and unfortunately I have a dinner booked for the 3rd." "Well," replied the chairman, "you must really do something and try and come to Waterlow Brothers and Layton's smoking concert!" "So," added Mr. Reyner, "when I am commanded to do anything possible I endeavour to do it. So I gave up my dinner and now I have pleasure, and may I say I have been amply rewarded by the fact of seeing you here this evening looking so jolly and enjoying yourselves with this most excellent programme arranged by your committee." (Applause.) But, concluded Mr. Reyner, in the salutation they had just given him he heard "music," and he felt there was talent in the room that might be made use of. (Laughter.) Of course solo whistling had somewhat gone out of vogue, but he felt there was a gentleman in the company who ought very well to have been on the platform giving an entertaining solo. However, they did not come there that night to hear him (the speaker) talk, but they had all come to enjoy themselves and the excellent programme. He would at once conclude by tendering once more on behalf of the directors their thanks, and his thanks, for the kind welcome given them. (Applause.)

Mr. SEYMOUR BENNETT said he also had to thank them warmly on behalf of the visitors. Those who were no longer young and who had been "through the hoop" would remember the advice given to a young wife on how to manage her husband. She was told to "feed the brute." (Laughter.) Well, those who had not been "through the hoop"—or put the hoop on the finger—would find that advice excellent, but he could tell them of something much better, and that was flattery. That was what Mr. Elson had applied to him, when he said, "I am charming." (Laughter.) Mr. Reyner had also told them with a certain amount of pathos how he had to give up his dinner to come there that night. Well, it was not often one got to the windy side of a City man, so he (the speaker) had had a dinner as well as coming there that night. He thoroughly enjoyed the dinner and now he was enjoying that excellent concert. He thanked them all for the kind way the toast had been received and for their kindness and entertainment. (Applause.)

The programme was again resumed, and by special request Mr. Pain gave a number of violin solos which won for him unstinted applause. Mr. Vincent was delightful in his song "Come into the Garden Maude," which was loudly applauded and encored. Miss Edith Eatherley also scored another success in one of her popular songs, and humour was kept up by Mr. George Roberts—who told the tale of "Ginger,"—and Mr. Wilson Martell. Mr. Richards and Miss Orrell also gave several songs, and Mr. Fredric Moore sent the company awe-stricken by his round of magical problems, and artfully reminded everyone to not "divulge the secrets."

The Chairman Thanked.

Mr. A. G. GRONOW caused another break in in the programme in order to ask the company to rise and drink the health of "The Chairman" (Mr. Elson), and also to express their appreciation of him. A gathering of that kind tended to promote good feeling and good fellowship between all the staffs. He hoped they had one common aim, and that was the success of the company, and after that their own success must follow. He sincerely hoped they would have similar gatherings in the future. In conclusion Mr. Gronow referred to the advice and help he had always received from Mr. Elson, and asked the workers and friends to show their appreciation in the usual way.

The company sang "He's a jolly good fellow."

Mr. ELSON, in reply, said Mr. Gronon and he were very good pals and very good friends, and Mr. Gronow, indeed, was a good friend to all of them. (Hear, hear.) They also should not forget their thanks were due to the committee who had arranged the concert. They deserved three hearty cheers for working so hard. He coupled with the toast of their health the name of Mr. Worrall, the hon. secretary.

Cheers having been given for the committee, Mr. Worrall, replying, observed that when the committee was mentioned his colleagues on it deserted him. (Laughter.) He thanked them all very much on behalf of the committee. The intention was to create good feeling and good fellowship throughout the firm, and if they got that spirit up, the work would be made lighter day by day. That was all he and the committee wanted to foster. (Loud applause.)

A few more songs followed, and thanks to the committee—Mr. Botten, Mr. Dunn, Mr. Bryant, Mr. Potter, Mr. Crassweller, Mr. Shaw, Mr. Parish (musical director), and Mr. Worrall, hon. secretary—a most enjoyable night was spent, and the comfort of everybody was looked after. The firm's artists showed that they were not lacking in their brush work, and the committee, with their usual goodness, showed their thoughtfulness by dispensing generously fragrant cigars amongst all the workers and visitors, which vied with the aroma of the modern "dhudeen." Truly this first great general concert will long be remembered.

All Other...	3,473,722	2,570,425

AT the Pwllheli Free Church Council, on the proposition of the Rev. John Hughes, B D., a resolution was passed unanimously in favour of assisting the union to put an end to the practice of ministers doing the work of journalists, which is causing much irritation among journalists in Wales.

A COMPLIMENTARY dinner was given, the other day, to William Spalckhaver at the Brevoort Hotel, New York, by the heads of departments and others to commemorate his fiftieth anniversary with R. Hoe and Co., printing press manufacturers. Mr. Spalckhaver has been chief engineer and head of the drafting department most of that time, and in that capacity has been responsible for many improvements and patents entering into the large printing presses upon which most of the principal newspapers throughout the world are printed and produced. Robert Hoe, president, on behalf of those present, presented Mr. Spalckhaver with a silver loving cup with a suitable inscription, and in his remarks eulogised the loyalty, genius and energy displayed by him in his many years of service with the company.

NORTH MIDLANDS CENTRE.

"Electricity as Applied to the Printing Trade."

By MR. G. E. PHILLIPS, M.I.E.E.

(Continued from our last issue.)

Speed Regulation.

As previously stated, one of the chief advantages of the electric drive is the ease with which the speed of the machine can be regulated to suit the style of work on the press. Now the two most common ways of regulating speed are known as the "Series" and the "Shunt" regulation.

The "Series" method is such that means are devised to choke back the main current; resistances are placed in series with the motor, which only allows a certain proportion of the full supply, the rest being dissipated in the form of heat, and the speed is consequently reduced proportionately to the amount so dissipated. This is very apparently a wasteful and uneconomical method, seeing that you are wasting in the form of heat, that which you have paid for as power.

The "Shunt" system is a method of increasing the speed of a motor by reducing the strength of the "field." The current flowing round the field coils is a very small proportion of the whole, about 2½ per cent., and to waste a portion of this is much more economical than tampering with the main current. So-called "Field Regulators" are placed in the "Field" circuit, and by choking back a very small proportion of this current the "Field" is weakened, and the rotating portion of the machine is speeded up in proportion to the amount of field weakening obtained.

From this it will very readily be gathered that where a large proportion of the hours run are above or below the normal, "Field" regulation is preferable to the "Series" method. This decision may necessitate the installation in the first place of a slower speed motor, and a somewhat increased *first cost*, but this is readily saved by the higher efficiency of the method of control.

In selecting your motor, arrange for it to run at a speed not necessarily at the lowest, but at the slowest speed at which the press will run for fairly lengthy periods. The controller can then be arranged to have, say, three or four "Series" steps for lowering the speed below the standard speed, and a long series of "Shunt" studs, each giving a speed above the normal.

Shunt regulation can, with specially wound motors, be carried up 4 to 1, that is, from say, 500-r.p.m. to 2,000-r.p.m. Such regulation, of course, is not required for ordinary flat-bed machines, but is often desirable on others.

As an instance, I might mention that in the works of which your President has control, we have a special machine which prints, numbers, and cuts our shop counter books.

This machine is fed by paper direct from the roll, and for numerous reasons it was found desirable to run this machine at any of about twelve speeds, according to the condition of the paper, etc.; incidentally, it was found that at times the edges of the rolls were cut or otherwise damaged in transit to the works, and having once commenced a tear, the paper frequently tore right across in going through the machine, necessitating the threading of the paper through the whole machine again. This was to be avoided if only the machine could be made to revolve at a "crawling" speed while the damaged portion was passing through; so the problem set was: that the machine started or stopped by a button, and could be set to run at any of twelve speeds, as selected, and also by means of a push button could be made to drop to the "crawling speed" from either of three positions on the machine, and then to continue to revolve at this speed until the cause for so doing was removed.

It was then required that by pushing another button the machine should accelerate until it reached whichever speed of the twelve at which it was previously running.

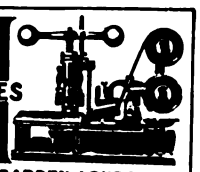
This is somewhat complex for a small machine, but was successfully installed, and I say successfully because I have received no complaints, and the whole apparatus measures only 24-in. by 30-in. exclusive of buttons.

The methods referred to here are capable of regulating almost any flat-bed press, and the methods of speed regulating for the larger Hoe presses and similar newspaper presses have been referred to previously.

Transmission of Illustrations by Telegraphy.

I was somewhat dubious about including this subject, owing to the fact that it is hardly likely to be of interest except to newspaper publishers, and then only as a "side line," but owing to the kindness of your President, I was enabled to attend your last lecture, and as great interest was shown in the half-tone process, I decided to say something about the telegraphic transmission of photographs, as this is to a certain extent worked on the half-tone process.

The earliest record of any success in this line was in 1847, when Baker conceived the idea that the transmission of speech consisted in the sending of a series of named letters, and their after arrangement being such that they gave us a conception of the sender's meaning, and that it should also be possible to divide up a picture into a very large number of small pieces, each named or numbered, according to the density or depth of light and shade.



For instance, a certain shaded portion would be C. or C1., and another D. or D2., and having named each square, to telegraph its descriptive number, and these would be arranged in the same order at the receiving end. This was actually done, but was quite impracticable, owing to the length of time taken to complete a picture.

Baker's next experiment consisted of taking a glass cylinder and covering same with tinfoil, and painting the picture into the metal with an ink made of shellac. Over this picture a stylus was passed, which ran spirally, somewhat similar to the present day gramophone record. This stylus was thus bought into contact one moment with shellac, which is an insulator, and no current passed, then the next moment was touching the tinfoil, and allowed the current to pass. This stylus was connected to a battery, which in turn connected up to a similar glass cylinder at the receiving end, and was encased in a chemically-treated paper, which turned black when a current was passed through it; consequently a picture at least somewhat resembling the original was reproduced in a "negative" form. This process was a decided advance, but was never found of any commercial value.

Many attempts were made to improve this system, but eventually an entirely new basis was formed which consisted of the use of a selenium cell. Now selenium is a metal which has the property of varying its resistance to electricity, according to the amount of light to which it is subjected.

The picture to be transmitted, we will suppose, is thrown upon a screen, and of course produces a sheet of light, consisting of varying depths of light and shade. Imagine now, that this picture could be cut up say into a thousand squares, and a selenium cell placed first in No. 1 square, then in No. 2 square, and so on, and that the varying resistance produced by the varying light would regulate the intensity of light in a lamp at the receiving end. Now place a sheet of sensitive paper in a similar position as at the sending end, and allow the light varying in intensity to shine on an exactly similar portion of the paper. When we had completed the thousand squares and developed the paper, we should get something like a reproduction of the original.

Professor Perry used this system in the following manner:—He printed his original on celluloid, and fastened same to a glass cylinder, inside of which was placed an electric lamp, and the cylinder revolved: The light allowed to pass consisted of only a "pencil" of light, and naturally varied according to the light and shade of the picture. This light was focussed on a prism, and reflected upon the surface of a selenium cell. As the glass revolves, it gradually rises, so that the light travels in a very fine spiral over the whole picture. At the receiving end, a second cylinder revolves in direct synchronism and

the varying light is "pencilled" into a sensitive film placed on same.

This system was fairly successful, but the greatest objection consisted of the so-called "lag," that is, that the change in the selenium cell is not sufficiently quick and definite to record truthfully when very sudden and rapid changes in light occur in very close proximity.

Continual experiment by Professor Korn has resulted in almost complete removal of this "lag," but the means whereby it has been attained is too much a mathematical problem to be of general interest here this evening.

The *Daily Mirror* has done a very great deal to improve the methods of Telegraphic Transmission of Illustrations, and some examples of this interesting and ingenious system appears almost daily in this enterprising journal.

The First Telegraphed Picture

was received in London at midnight on November 7th, 1907, and was of King Edward VII., and one of President Fallieres was returned to Paris. The carbon print of King Edward had been specially prepared, and was an excellent example, in fact it is still acknowledged as the finest specimen of telegraphic reproduction ever received over the wires, due chiefly, in all probability, to the fact that speed and urgency for "copy" nowadays do not allow of the elaborate preparations which were given to this special picture.

The length of time occupied to transmit is eleven minutes, although a picture of the finish of St. Leger was transmitted from Manchester to London in less than eight minutes.

In view of the interest shown at the half-tone lecture, I will roughly indicate how the photographs for transmission are produced. The photograph to be reproduced is pinned to an easel, and artificially illuminated, and then photographed through a half-tone screen fixed at a certain distance in front of the sensitive plate. This screen, you will remember, has parallel lines ruled all over it at anything from 35 to 120 lines to the square inch. Two of these screens are used, one with the lines horizontal and the other vertical; this breaks up the picture into a series of dots, and in the negative reproduces dots of varying height and density.

The print from the half-tone negative is now prepared by printing from it upon a sheet of thick lead or tin-foil, coated with a thin layer of fish glue rendered sensitive by a solution of bichromate. When printed it is held under a tap and all the unexposed parts dissolve away. The print is dried and placed in a press between two polished steel plates. The glue image is thus pressed into the soft metal foil without distortions.

This is then ready for the telaughtograph cylinder, and is revolved while the stylus is in contact, and a current passes whenever the stylus is on clean metal foil, and the circuit is broken whenever on a portion covered by fish glue.

Sufficient has been said to show the general principle of this scheme, and I will not worry you with details of wireless transmission; suffice it to say that this is also practicable, and is in almost daily use.

Mr. Thorne Baker, of the *Daily Mirror*, is the inventor of the most successful apparatus, and any day you may expect to hear that pictures have been successfully transmitted across the Atlantic.

Special Appliances.

These are almost innumerable, but a few will be referred to, and others can be gone into and amplified if questions show the necessity.

Time Recording.—This is now carried out electrically in nearly all modern works, and consists of a grand master clock which actuates a contact automatically at every 15 or 30 seconds. These electric impulses are transmitted to the dials for ordinary time indicators, and to the time recorders where installed.

The great advantage of course is that the same time is found in every department, and hard and fast rules with regard to loss of time can be insisted upon.

A printing works in this city I was in a few weeks ago has three time recorders, and at the time referred to there were 3½ minutes between the most "slow" and the most "fast" recorders. Should two men arrive at the correct starting time exactly, and record their arrival, one on one clock and the other on another clock, one would either be 3½ minutes early, or the other 3½ minutes late, would be stopped half-an-hour.

Electric synchronism obviates all this. It is usual where electric clocks are installed to also automatically ring the electric time bells or hooters, at the correct hours for starting and stopping, and for meals.

These times can be set somewhat similar to the ordinary alarm clock, and if necessary are so arranged that they discriminate between ordinary days and Saturdays, and do not ring at all on Sundays.

It is surely unnecessary to refer to *Telephones* as being necessary to the printing trade; these should be installed in every department, and much running about be avoided.

The *Telewriter* is an apparatus which not only transmits the sounds of the voice, but also in addition automatically transmits the handwriting, and in such a way as to be easily recognised.

This allows of no errors in the transmission of figures; it also allows one to even sketch to illustrate some complex subject referred to in the conversation. Orders can be written out in the office, and the copy kept for reference, and an actual written order is also to hand, say in the paper warehouse, and no delay occurs by sending the order down by messenger, and where 'phones only are used, it avoids mistakes in figures such as *eleven* being taken for *seven*.

Cleaning and Removing Dust from Compositors' Racks.

Little electric blowers, easily carried in the hand, can be had which will do as much removing of dust in five minutes as a boy can do in an hour with ordinary bellows.

If objection be made to raising the dust by blowing, the Electric Suction Cleaner can be had, in which the type racks are placed in a cabinet, a compressed air jet raises all the dust, and a vacuum pump sucks it all away into a special receptacle.

Some of you may say "Oh yes! but that could be done without Electricity." True, but printing can be done with a hand press or a rubber stamp, but you don't do it; and so electricity, being so flexible, allows you to take the machine to the work, and *not* the work to the machine, and so makes itself indispensable to the modern and keen business manager.

A purely electrical accessory to the printing trade is the *Electric Neutraliser.* This machine is designed to eliminate all the troubles due to frictional electricity in papers.

You will all have experienced more or less the troubles due to the papers "sticking" sometimes to one another, sometimes to the "fly," the cause of "offsetting," smudges, etc. The higher the speed at which the paper travels, the greater the trouble becomes.

You doubtless all know that friction in many articles produces electricity, and so-called "like" charges attract one another. Now in sheets of paper a "charge" is set up, often on both sides of the sheet, and may be a positive charge or a negative charge; there may even be one in one part and the other in another part of the same sheet. The Electric Neutraliser is a machine which generates a very high voltage alternating current, and then is led through special cables to a bar somewhat resembling a huge comb, which is called the inductor, and is placed at a point on a press where it can span the paper just after leaving the cylinder, or at least before it goes on to the pile. The alternating current (that is a current rapidly changing from positive to negative) is passed through the inductor, the static or stationary charge on the paper is neutralised by the common electrical law that opposite polarities attract one another, and in passing under the inductor the negative is neutralised by a charge of positive, and *vice versâ*.

The elimination of static electricity in paper allows of more complete "registering," prevents "off-setting," "slip-sheeting," allows even "jogging," and eliminates the maintenance of the machine-room at the somewhat high temperature now necessary to prevent "electrification."

Electro-Plating of stereo plates is, of course, so well known to you all as to simply allow me to pass it after reference.

Paper Carriers of the conveyer type, such as a travelling band, the over-head runway, consisting of ordinary pulley blocks electrically wound by a small motor; the self-lander, which consists of an apparatus which will raise, lower, or travel, in either direction with only one control handle, are all examples of the use of electricity giving control and speed regulation which is absolutely unattainable in any other way.

The electrical engineer can be of use in almost any difficulty providing he is informed of it. For instance: considerable difficulty was recently experienced owing to the unsatisfactory working of the rubber-feed roller of a self-feeding folding machine, and the best results were obtained by continually damping the roller, but this meant that an automatic machine had to have an attendant. When this was pointed out, a small electric kettle was connected up, and placed in such a position that a small jet of saturated steam continually played on the roller, and so once again made the machine automatic.

This kettle was cheap, easily removed, and gave good results, while ordinary steam would have meant a costly installation of steam pipes, a reducing valve to reduce the pressure, and even then the probability is that the steam would have been far too hot to have produced the necessary amount of moisture.

"*The Autocall*" is an electric method of signalling to draw attention to the fact that certain people are required, such as the works manager, the engineer, fireman, fitter, etc.

The *News of the World* have an attachment to the main switches which illuminates a special lamp in the editor's room whenever the switch is opened to stop the machine. Directly connected to this lamp is a switch which the editor operates in the event of his requiring the machine to remain stopped until a special "Stop Press News" plate is fixed; this illuminates a green lamp on the leading hand's platform, and he keeps his machine off until this light is extinguished.

This paper has seventeen large presses, and consequently the editor has seventeen lamps and switches on his desk, and knows exactly which machines are running and which are stopped.

In addition to this, special signalling apparatus is fitted between the editor's room and the foundry, and in the event of special plates being required after printing has once commenced, he signals by means of a white light for the metal to be prepared. A red light indicates that the matrix is complete and coming down, and a green light that printing will be completed, as the machines are running, and that the foundry can prepare to close.

The plates are carried on a little gravity railway to the various machines, and again signalling lamps are automatically operated by the trolleys to indicate the position of the trolleys.

The metal is stirred and skimmed by electrically-operated machines, and the molten metal is pumped by an electrically-operated pump, which is automatically controlled by a float switch, the pump automatically shutting down when the metal is a certain height in the container, and starting up again when it has been lowered to a certain distance.

In the press-room the papers are taken from the machines and placed in clips on vertical travelling bands, which are electrically released when they arrive in the publishing-room.

Questions were particularly invited, and proved a distinctive feature owing to their variety, also for the ready and often witty manner in which they were answered by Mr. Phillips, adding considerably to the interest taken in the subject.

The lecturer, in addition to exhibiting a large amount of electrical apparatus, pamphlets, etc., gave demonstrations by the aid of his lantern of some beautiful slides, showing the electrical equipment of many large printing houses and other installations.

The Chairman proposed the usual vote of thanks, which was seconded by Mr. Moore (vice-president), and heartily endorsed by all, Mr. Phillips returning thanks.

KEEP THE PROFITS.—A writer in the *Printing Trade News* says that he well remembers that when Charles Goodall, of Leeds, was showing a new machine of wonderful productive ability to him, he, obsessed at that time with the spirit of the day—low cost to meet low competition—remarked: "This machine will certainly enable you to cut out all competition in this product." Mr. Goodall replied bluntly: "Young man, this machine is not intended to cut prices; it is expected to put more money in my pocket." Needless to say, Mr. Goodall was a very successful binder and printer. He probably knew little of costs as costs are known to-day, but he always knew how to estimate and how to charge, and any printer who knows these two things will have no trouble in steering clear of the ragged edge of existence. Be not obsessed with the idea of cutting prices to the quick when a labour-saving machine is installed.

A MOVEMENT is on foot in connection with the Society of Authors to extend its benefits to the British composer. Already for the past two years the Composers' Sub-committee has been meeting at the Society of Authors.

Nottingham Master Printers.

Costing Meeting.

At the conclusion of Mr. Goodwin's canvass of Nottingham a meeting was held on Tuesday, November 25th, to receive his report.

Mr. James Forman presided, and remarked upon the general progress of the movement, and referred to the value the system had been in their own business.

He also pointed out that while the adoption of the system would unquestionably benefit each printer who did so, that as the number installing it increased the benefits would be appreciably more.

The progress made since February last was decidedly encouraging, and he was sure they would be interested in hearing how the Organising Secretary had found matters in Nottingham.

Mr. Goodwin said that it was gratifying to find on visiting 25 of the printers of the city, some having large plants and others comparatively small, that the costing movement had been so thoroughly explained and such valuable spade work done by the local committee that nowhere had he found any misunderstanding as to the object of the campaign, and the main features of the system were clearly understood.

He had interviewed 23 principals, and could say that 19 fully intend adopting the recommendations of the Costing Committee. He had examined the forms and figures in several offices where the system was now in operation, and suggested to others the steps they should take to start, and he was quite sure that early next year at least 50 per cent. of Nottingham printers would be working on approved lines of costing.

A general discussion followed, and various suggestions were made for helping forward the movement.

Machine Rulers, Bookbinders, Printers, and Kindred Trades Overseers' Association.

The monthly meeting of the above Association took place on Tuesday, 2nd inst., at the "Ship," Ivy-lane, Newgate-street, E.C., when a large number of members attended. The president, Mr. J. E. Dixon, was in the chair, but as he was suffering from the effects of a cold he asked Mr. J. Walker, the vice-president, to take his place. The minutes of the previous meeting having been read and confirmed, the following candidates for membership were submitted and elected to membership:—Mr. E. Shaw (binding department, Merivale Press), Mr. W. Fordham (binding department, Blades, East and Blades), and Mr. F. W. Hart (blocking department, H. K. Judd and Co., Ltd.). The chairman gave each of these gentlemen a very hearty welcome to the Association, expressing the hope that they would benefit in the first instance by the brotherly spirit of the Association, and that they should do all in their power to uphold its principles and increase its membership. Secondly, he assured them of the help of the Association at any time when they were in need, should such misfortune overtake them, and it behoved everyone to provide against such exigencies.

The admission to membership was duly carried amid applause, and the three new members expressed their thanks to the meeting and trusted they would prove worthy members.

A new venture was proposed in the form of a whist drive to take place in January; the suggestion being well received, the matter was left in the hands of Mr. F. Pearse to arrange, with any assistance from other gentlemen he might require.

Messrs. F. Pearse, J. Warner and A. H. Smith were chosen as stewards for the annual bohemian concert (ladies' night) to be held in February, and also for the annual dinner to be held in March next.

This concluded the business of the evening, and the chairman called upon Mr. F. Pearse to entertain the members by calling upon those whom he had selected to give songs, etc. Mr. Donald Ball opened by an overture on the piano in his usual able style. Mr. W. A. Price sang "The Little Tree that's Growing in the Garden" with his usual humour, and Mr. Russell followed with the old favourite, "Success to the Old Brigade," while Mr. A W. Hunt (treasurer) sang "Peter Henry" and an encore in good style, all the choruses being rendered with gusto by the audience. Mr. J. Lee ridiculed the comic element in one of his serio-comic recitations. Four of the new members, Messrs. A. Harvey, A. Walker and F. W. Hart, gave good songs with rousing choruses, while Mr. Edward Shaw proved his possession of a remarkably fine voice, and his military songs were received with vociferous applause.

Mr. J. Walker was not allowed to escape from singing "A Wee Deoch an' Doris," which caused much amusement, and "Mary," in the Scotch dialect, was given as an encore.

Mr. F. Pearse concluded the programme by singing "Mary Ann is After Me" and "Chorus, Gentlemen" in a very creditable manner.

A hearty vote of thanks was accorded to Mr. F. Pearse, not only for his efforts in providing such an excellent entertainment, but for his skill in finding such talent among the members themselves.

The vote was carried with acclamation, Mr. Pearse suitably responding, and the company dispersed after singing "God Save the King."

The next monthly meeting will take place on January 6th, when Mr. T. Bell has kindly promised to give his second lecture on "Chemistry," with apparatus. Overseers who are not already members may be invited to attend on written application to the secretary, Mr. Geo. A. Eden, 9, Murillo-road, Lee, S.E.

Incrustation of Steam Boilers, etc.

Much might be said and written on the various properties of deposits often found in steam boilers, but to manufacturers the important problem is: How are they to be prevented from adhering in a stone-like substance to tubes and plates of boilers? It must be evident to all factory owners that any substance which is a bad conducting material, must tend to reduce the economical working powers and durability of a boiler. One of the principal objections to boiler scale is, that it may cause the metal over the fire to be so highly heated as to cause burning; also, leakage of joints and tube ends, with their consequent corrosion and other forms of rapid deterioration.

A fluid is now on the market, known as "Fitz.," for which the manufacturers claim that if such fluid is regularly used, chipping can in time be dispensed with and this should be an advantage to all steam users, especially those who have boilers of the loco or vertical type, as in such cases it is impossible to chip off the deposits owing to the inaccessability of certain parts. Therefore, some solvent should be used which will reduce the incrustation to a sludge, so that it can be washed out.

In using a solvent for incrustation, care should be taken to select one that will have no injurious effect on the fittings or boiler plates. This is a point to which the manufacturers of the "Fitz." boiler fluid have devoted special attention, and they state that the fluid is now being used by many large steam users at home and abroad, in addition to gas and water works, shipping and railway companies, etc., etc., and its trials have turned out most satisfactory. "Fitz." has been found to remove old scale and prevent further formation, without causing any deterioration to the plates, tubes, or fittings of boilers.

In large boiler-houses sometimes feed-heaters are installed whereby the temperature of the feed water is raised, probably to 190 degrees before entering the boilers, by means of exhaust steam. In such cases a large amount of solids present in the feed water can be checked and precipitated outside the boiler—*i.e.*, in the heater—by using "Fitz." fluid through the heater. Therefore, the boilers can be run much longer between the cleaning times, which is an asset where boilers are hard pressed, and no spare plant is available.

It is well known that economisers can effect a saving in fuel to the extent of 25 per cent. when clean, but when they become incrustated with scale, this saving is very much reduced. Consequently, to stop plant for boring and cleaning is often costly and inconvenient. Messrs. James Fitzgibbons and Co. maintain that their "Fitz." fluid, as reported on by steam users, will prevent

In AMERICA

There is published only one weekly paper representative of the interests of employing printers. It is the most popular Printers' Paper read in that country:—

Because it is the Trade Business Journal.
Because it has a splendid news service, with twenty-two paid correspondents.
Because it deals with the practical always.
It is the only Paper which holds the attention of the man who owns the plant.
The PRINTING TRADE NEWS does not attempt to teach printers to set type, but it is the foremost authority on the latest efficiency methods, the organization activities, progress in cost system work, approved methods of printers' advertising and anything and everything that tends to make the printing business a pleasant and profitable one.

It is pre-eminently the trade journal English machine builders should use to make their product known in America.

We have good mechanics. Let us have good business men. Let the NEWS come to YOU every week. Europe $5.00 per year; Canada $3.00. 64 pages weekly.

every form of incrustation, and particulars of their speciality will be gladly furnished to any manufacturer, or any user of steam plant who is troubled with incrustation in boilers, economisers, etc. The same firm also make a fluid for use in gas-engine water jackets, the scale in which often causes trouble and expense.

Mr. Strange on Wood Engraving.

In the Lecture Theatre of the South Kensington Museum, on Thursday evening last, a lecture on Wood Engraving was given by a well-known authority, Mr. Edward F. Strange.

The lecturer commenced by pointing out that wood engraving was to-day the most neglected of all the Graphic Arts, and said that the intention of his address was mainly to show how little reason existed for this. The precise cause of the neglect was not, however, to be gathered from his remarks, so that the uninitiated could only surmise that some powerful unnamed agency was at work. Its name is "Process," but the word is evidently anathema to Mr. Strange, as it was to Sir Frank Short the previous week, seeing that neither of them mentioned it.

After a brief summary of the early history of the Art, when wood-cuts were probably executed by their designers, with the aid only of the knife, the lecturer referred to the splendid productions of Dürer and his school, of the Italian book illustrators, and of Holbein. So far as known, none of the best work of this period was actually cut by the designers, who were, however, very fortunate in having the services of craftsmen of great skill, able to do justice to their ideals. After this body of craftsmen had ceased to exist, say about the middle of the sixteenth century, there is an interval of more than two centuries, broken only by occasional brilliant attempts at reproduction of drawings, such as those of Rubens, cut by Jeghers. Bewick popularised the new craft of wood *engraving*—which is quite a different thing to the old style of wood *cutting*—although he did not invent his technical method of using a burin on the cross-section of boxwood instead of the knife on a plank surface. His followers soon lost their individuality; but in the well-known period of the "sixties," the work of the Dalziel Bros. and Swain raised interpretative and facsimile engraving to a high level. The lecturer concluded with references to modern work, instancing that of Messrs. Ricketts, Charles Shannon, A.R.A., Sydney Lee, T. Sturge Moore and others. He considered that there were still infinite possibilities in the art, if used honestly as a means of expression of the artist's aim. Mr. Strange thinks the technique is one suited for this purpose, within reasonable limits; and while there is small hope that in the future mechanical processes will be superseded by wood engraving, that outlook ought to be really in favour of the artist, who can thus appeal to a better audience with far more latitude for his art than if it were restricted by the requirements of authors and publishers.

Like all the lectures in this series, Mr. Strange's was exceedingly well illustrated with lantern slides of typical wood engravings of various periods, or rather of the earliest and the later periods, there being a gap of some two hundred years between the last old one shown—a tinted design in chiaroscuro by Golfzius—and the first example of the new English school, an engraving by Bewick. One point of interest dwelt upon by Mr. Strange was his idea that it is wrong to speak of European wood cutting as being something absolutely new, invented say towards the close of the fourteenth century. He thinks it quite likely that as the art had certainly been known in China, if not in the Far East generally, for several centuries previous, a knowledge of its processes and results was probably brought to Europe *via* the trade routes, the mediæval intercourse between East and West being evidently far more frequent and close than is generally thought to have been the case.

There is presumably some good reason for the late hour of starting and the very short time limit allowed for these lectures, but sixty-five minutes, or thereabouts, is really much too restricted a period in which to even gallop through a resumé of the work of five centuries, and as Mr. Short began leisurely, being evidently in a discursive mood, he had to contract his remarks considerably at the other end of his lecture, a circumstance which can hardly be very satisfactory to a speaker or his audience.

The *Economist* announces the death of Mr. Edward Johnstone, editor of that paper from 1882 to 1907.

Manchester Printers' Social.

A very enjoyable social function arranged by the President of the local Master Printers' Association, Mr. J. B. Percy, and the Chairman of the Costing Committee, Mr. J. E. T. Allen, and attended by a large number of the members of the Association and others connected with the craft, was held at Queen's Hotel, Manchester, on 27th ult. Mr. J. B. Percy presided, and spoke as to the pleasure it gave those who had issued the invitations to see so many present, and that the steady improvement in the promotion of a friendly spirit in the printing community was gratifying to all concerned.

An excellent musical programme had been arranged, and was much appreciated.

Mr. A. E. Goodwin, Organising Secretary of the Costing Committee, was present, being on his way up to Scotland, and in a brief address showed how interest in the costing movement was certainly not on the wane, and in practically every district in the country there were indications of good work being done. He alluded to the result of his canvass of Manchester, and the discoveries he had made as to active steps being taken by many firms to adopt certain features of the system, and urged on all present the importance of at once collating their time records if they intended to work the system in the New Year.

Mr. Yeaman spoke as to the benefits which would undoubtedly follow the general adoption of the Costing Committee's recommendations, and from his own experience instanced the damage done to the industry through ignorance of actual costs.

Mr. J. R. Phillips, C.A., who was introduced by Mr. Allen as the accountant in charge of their firm's accounts and auditor of several printing concerns, spoke as to the costing system from the standpoint of the accountant, and said that it could certainly be commended from that point of view. It was simple yet accurate, and whilst he might criticise certain minor details, the main features were unassailable.

Mr. J. E. T. Allen briefly commented on a recent instance of printers tendering in Manchester for a contract, and said that the one who secured it had the pleasure of reading on the first copy of minutes sent him to print, that £100 had been saved on the contract compared with the prices of five years ago. Such a state of affairs, when everyone knew how the cost of production had gone up, pointed to one direction and one only, viz., that they should all arrive at their real costs by the same methods.

Hearty thanks were accorded to all who took part and contributed to so successful a meeting. On Mr. F. Bird, the local secretary, the burden of arrangements had fallen, and needless to say had been most efficiently looked after.

The Offset Press.

Where the Papermaker can Help.

Papermakers are reminded from time to time of the development that is taking place in the lithographic printing world due to the advent of the offset press. Occasionally something is said about paper embodying special characteristics being required, but this apparently passes notice. At any rate, the response from papermakers up to now is almost non-existent. Over in America practically every papermaker of note has produced some lines of paper specially schemed for offset printing. There they all know of the development of the offset, but here in England, although the development from the printing side has been almost equally rapid, and although the buyers of lithographic printing are well aware of the latest method and are asking for their work to be executed that way, there is little or no effort on the part of papermakers to produce and push special lines.

The principle and proposition of the offset press is this: it is a machine to produce every class of lithographic printing hitherto worked on the ordinary flat bed and stone machine. In addition, it enables the lithographer to make a hold on much work that has hitherto been deemed distinctly letterpress, such as photo-process work in monotone and colours, or even type matter. Instead of the clumsy and expensive lithographic stones in use on flat bed machines, the offset press works entirely on the rotary principle and uses thin sheets of zinc, on which the designs to be printed are laid down in the same manner as on the stones. The press consists of three cylinders revolving in unison. The zinc plate is clamped round one cylinder, a rubber blanket round another cylinder, and the sheets to be printed are fed on to the third cylinder. The design on the zinc plate takes the ink and offsets an impression in reverse on to the rubber blanket, which then imprints the impression right way up on the sheet of paper.

Four times the speed of the flat bed machine and an infinitely superior grade of work is the result, not to mention a saving of 33⅓ to 75 per cent. of ink. The press is regularly engaged on commercial headings, postage stamps, cheques, stationery, bookwork, chromo-lithography, catalogue covers, and all classes of photo-mechanical process work. Obviously, then, almost every ordinary class of paper comes its way.

Most advertisers of machinery and many technical writers affirm that the offset press, by virtue of the resiliency of the rubber blanket, will print anything from sandpaper to leather embossed cover stock. This is quite true, but not helpful to makers of paper. It will print any paper, but much trouble may be caused and a great amount of time lost if the paper does not embody certain characteristics. The papermaker really requires to become acquainted with the features which cause trouble, in order to cope with them when producing paper specially intended for offset lithography. The lines of paper more especially used are banks and bonds for commercial headings, ordinary lithos, coated chromos and gummed chromos for colour work and shippers' tickets, greaseproof parchments for policies, etc.

The factors which lose time and cause trouble are, primarily, loose fibre, surface dust, powdery loading, burred edges and weakness of felting. All these types of detachable matter collect upon the damping rollers of the machine, whence they find their way into the damping water and ultimately become distributed on to the printing area of the zinc plate. They also find their way to the inking rollers and impair the efficiency of the inking by clogging the design. Finally, a film of dust and fibre settles on the rubber blanket and prevents the accurate deposition of the design. There is an ever-present danger of actual damage to both the rubber blanket and the zinc plate if the loose matter takes the form of lumps or knots. Black or white specks in the printing, broken portions of the design and constant stoppages for washing out, etc., are always consequent upon the deposition of loose matters from the paper.

The troubles are not wholly due to the paper containing loose matter before it goes into the machine. It must be observed that the rubber blanket only takes a thin film of ink, therefore the latter must be dense and full bodied. This means that a fairly strong pull is made on the paper. The rubber blanket also becomes tacky, or grippy, so that here again there is a tendency to pull the paper surface slightly. Add to this the fact that the speed at which the paper takes the impression is three or four times as great as in the case of flat-bed and stone methods, and it will be clearly obvious that the paper surface must be of a firm, cohesive and clean character. Papermakers have a good knowledge of the plucking and peeling troubles which occur on weakly coated chromo stock; the same thing applies to not only coateds, but to all classes of loose surfaced or poorly felted papers when worked on the offset.

The majority of high-class commercial headings, embodying ornamental lettering and engraved views, are now executed on the offset press, and the very best work in this direction is done in the U.S.A. This synchronises with the contemporary production in that country of bond paper with special offset characteristics. It is not that American papermakers make a better paper than we do, but simply that they thrust before the consumer and the printer the very papers which will best do the work. In England the selection of paper is left mainly to the haphazard choice of the customer, who is not educated through the medium of advertisement upon the subject of embodiment of character in certain types of paper.

The finest results are effected upon clean cut, dust free, hard surfaced, tub-sized bond paper, finished with a dead or slightly matt surface. The smooth English banks are too smooth, while the unglazed variety is a little too rough for the ideal surface. Dead finish just about seems to hit the mark; it picks up the ink beautifully, and if the paper is hard and crisp, there is no danger of fluffing during printing.

Turning to coated papers, the use of which is being rapidly transferred to the offset press, the drawback up to now has been that they do not yield so lustrous an impression as by the stone method of lithographing. Chromo paper takes up a thick film of ink, which as we have observed is not allowable on the offset press. Instead, the film is thin but of dense colouration. What is required, therefore, is a coated paper that will pick up the whole of the available ink supply at a very rapid speed and in the ultimate drying, yield a fairly lustrous effect. Ordinary chromo parts with some of its surface to the rubber blanket (which may be tacky), and dries rather flat and dead. The coated surface should be very firm, non-soluble, sensitive to inks of differing constitution, and free from shine or gloss in order to take the ink film quickly. Needless to say, there must be not the slightest trace of alum reaction, otherwise the zinc plate would speedily be ruined. It seems very probable that the use of casein will help to impart much of the desired character.

Americans are producing bond and coated papers in galore, advertised to embody offset characteristics. There are very few litho establishments not running offset presses, and there are not many larger consumers of lithography who have not been made thoroughly aware that to get quite the highest grade work they should specify special paper. The offset lithographer desires the most suitable paper in order to work quick and well. Here in England these conditions are developing, more particularly from the printing side, but the papermakers are not yet out in the field effectively. Perhaps they take it too readily for granted when it is said that any paper will do. If they doubt the popularity of the offset press, enquiries among printers' engineers will prove that very few flat-bed machines are now being turned out compared to five years ago, while the value of second-hand machines is at a very low ebb. Every provincial town of importance has its offsets running, and the paper buyers are looking round for the right paper.

By way of diversion, I have just counted up the number of advertisements dealing with offset paper, machinery and supplies in the representative American and English litho trade papers, and this is what I find:

The National Lithographer.—New York, October.

Offset Machinery and Supplies, 16 advertisements.
Offset Paper, 11 advertisements.

The Modern Lithographer and Offset Printer.— London, October.

Offset Machinery and Supplies, 12 advertisements.
Offset Paper, Nil.

This seems proof, conclusively, that something is wrong somewhere. Probably in U.S.A. there is more intercourse between the heads of allied businesses!

If, however, our home papermakers desire further information on any phase of the subject, let the enquirers come along in any shape or form, and the subject will be tackled in as helpful a manner as possible. Should these notes interest any reader who has not had the pleasure of viewing offset work on different papers, the writer will take pleasure in loaning representative specimens through the medium of the editor.

ONE often reads about the alleged "scrapping" of old machines for new, but it is probably only very seldom that this is done literally. It was, however, the case at Buenos Ayres recently, where a Canadian typesetting machine was replaced by a three-magazine No. 8 Linotype. A photograph reproduced in *Ecos Graficos* represents the former machine being smashed up with a sledge hammer, in its owner's machine-room.

AT the Ulster Assizes at Belfast, last week, three men were charged with riot and with assaulting Bernard Conway, a reporter on the *Dungannon Democrat*, a Nationalist newspaper. The judge said the one thing more certain than another was that Conway was the victim of an unprovoked attack, while there was also evidence to show that there had been a riot. The jury returned a verdict of not guilty, and the prisoners were discharged.

Printers' Managers and Overseers ASSOCIATION.

YORKSHIRE CENTRE.

"Modern Methods of Craft Training."

The recent meeting of the Yorkshire Centre was held at headquarters to hear an address by Mr. R. E. Barnett, B.Sc., head master of the Central Technical Schools, Leeds. In the absence of the President, Mr. Barnett was introduced to the meeting by Mr. H. Dixon, vice-president, who said that Mr. Barnett had taken such a prominent part in the promotion of technical education in all its branches in Leeds that he needed no introduction to the members of the Yorkshire Centre.

Mr. Barnett spoke as follows:—

The Necessity for Craft Education.

As regards the apprentice, the necessity mainly arises from the modern introduction of scientific and mechanical methods into what were originally simple handicraft processes. There is so much more to learn in a craft nowadays. Moreover, the very increase in the complexity of an industry has led to extreme specialisation and division of labour, which makes it still more difficult for the lad to learn his trade in the old-fashioned way. I may quote Mr. C. T. Jacobi, the well-known expert:—"Owing to the specialisation or sub-division of the many trades that take part in the production of the printed volume the apprentice does not obtain the same experience he formerly received." And yet, as he goes on to say, "What is needed is less rule-of-thumb in the production of work nowadays, and if we are to progress in the printing arts we must adopt the more scientific means to that end."

The same change in industrial conditions also renders craft education in some form or other necessary for those who have passed the apprenticeship stage. Even if they have been with a good firm and have been taking some technical study, the great complexity of a modern trade cannot easily be mastered during apprenticeship. In the case of men who have not had these advantages, the need of some means to improve their capacity is still more obvious. Finally, we must remember that what is up-to-date to-day may be behind the times to-morrow. The older worker has little opportunity of learning new methods in the course of his daily work, and unless some external opportunity is offered him he runs the risk of losing his job through the job itself being superseded by newer processes, for which younger men have been trained. Another point affecting the older worker is that the school can offer him opportunities of applying his experience in actual working out new methods, particularly in such branches as lithography and photo-mechanical processes. By this kind of self-education he not only advances himself, but also assists the progress of his craft.

We have thus considered the necessity for craft education as it affects the individual worker, both apprentice and journeyman. But we must not forget what is really the primary object of technical education, justifying its provision out of public funds. It is not mainly to benefit the individual student. He will benefit, it is hoped, in return for his small expenditure of money and large expenditnre of leisure, time and energy, but the greater part of the cost is not borne by him, but by the municipality and the State. It is not to benefit the individual employer. He may benefit, but this cannot be assured him, because he may not retain the services of the trained worker. The great primary objects are to benefit (first) the industry itself, and thus the trade of the City in which the education is being given; and (second) the trade of the kingdom, of which the city forms part. The first justifies the employment of municipal funds, and the second the Government grants by which the work is so largely supported.

Before leaving the question of benefits, we may pause to consider a possible objection. It may be said that if one person profits someone else must lose. This is the converse of the old saying, "It's an ill wind that blows nobody any good," so it might be said to be a remarkably good wind if it blows nobody any ill. There is a certain amount of truth in this. If the Leeds printing trade rapidly increases in prosperity, the trade of some rival centre may suffer. It may or may not; in any case it certainly will not lose as much as we gain. If the other centres in this country also benefit by training their craftsmen, the country as a whole will benefit. This may imply a loss to some foreign country, but I ask you if that is a reason for our refraining from doing our best? The essence of progress lies in competition; without this we have stagnation.

Depend on it the foreign manufacturer and the foreign governments will not refrain from competing with you for the world's trade, and they are fully alive to the valuable aid they can derive from technical education. As a result of their efforts, vast sums of British money are spent in paying the foreign printing firms to do work that we could do at home. I am not referring to cheap printing done by low-paid labour; I am quite willing that this should continue to be done abroad. I am referring to high-class illustration and colour work, such as was seen at the recent Poster Exhibition. Mr. Bottomley, whom you know well as the head of the printing department of our technical school in Leeds, and who personally collected a very large proportion of the specimens, was surprised to find how much of the better classes of work seen in this country was actually printed abroad. The reason being that there are not sufficient men in this country possessing the requisite knowledge of these new processes to do all the work required.

Methods of Craft Training.

In the second part of his paper Mr. Barnett began by referring to the older method—apprenticeship only. Then turning to modern methods, he said these implied the combination of technical education outside the works with the indispensable works training. Answering the question of how to start to make the boy of 13 or 14 a printer in the seven or eight years available up to 21, he said that general education should not cease at 13, as in Leeds. This age must be raised. Supposing this extended to 14 or 15, could the general education be made more useful?

Without risking premature specialisation, it was clear that it would be quite possible to improve the usefulness of a general school course if it were known that all or most of the lads were going to enter a particular trade. They could take the boy at 12 and give him two years of general education specialised to a certain degree, along with others of similar prospects. This was the idea embodied in a preparatory trade school. But it was obviously only possible in a large centre.

Dealing with definite trade schools, Mr. Barnett said: These are intended to do for the artisan what the technical and other colleges do for the future leader of industry or professional man. They try to teach the actual practice of the trade, as well as to continue general education and to give instruction in the science and art principles underlying trade. Trade schools on the continent and in America are, in some cases, run on regular factory lines, the products being sold to the public.

Having referred to the trade schools in London, the lecturer spoke of pre-apprenticeship training, and asked how far it should go towards teaching actual trade practice. One disadvantage of this attempt was that wrong ideas were apt to be acquired, which might be a great handicap on starting in actual work. Each trade wanted considering on its merits.

In conclusion Mr. Barnett said: I wish to say how much I value this opportunity of meeting the members of the Yorkshire branch of the P. M. and O. A. You are members of a large and influential organisation, worked on the highest possible lines in the best interests of your craft. Your traditions are of the best, and it is gratifying to note the prosperity that has attended your efforts. It is now 20 years since your foundation in London in 1893. Ten years ago your membership was a little over 400. It is now well over the thousand mark. I suppose that next year you will be celebrating your ma-

Digitized by Google

jority. You have my best wishes for a big increase in membership and funds worthy of the occasion.

As regards the Yorkshire Branch, you have always figured prominently among the provincial centres. Your numbers were only exceeded by Manchester last year, and I hope that you will not be long before you reverse this position and stand at the head of the provincial branches.

Your influence has been all for good in the past, and I feel that the future progress of the British printing trade will largely depend on you. In craft education the Association has always taken a creditable interest, and the Yorkshire branch rendered invaluable services to me four years ago, when I was trying to develope the printing trade classes at our Technical Schools.

At the close of the lecture a hearty vote of thanks was proposed by Mr. WILKINSON, seconded by Mr. Chadwick, and carried unanimously.

City and Guilds of London INSTITUTE.

Report on the Work of the Session.

The annual report of the City and Guilds of London Institute on the work of the Department of Technology for the session 1912-13 shows a further falling off in the number of candidates presenting themselves for examination and in the number of passes, the latter in somewhat greater ratio than the former. At the same time the number of separate classes has again increased and the number of students in attendance has risen to the largest number on record—54,510. There was a decrease of one in the number of subjects in which examinations were held, and an increase of one in the number of examination centres. As regards the new programme for the session 1913-14, an important alteration has been made in the regulations governing the award of the Institute's Full Technological Certificate. As an alternative to the qualifications previously laid down, the Institute is prepared to accept a duly certified statement that the candidate has satisfactorily attended a course of instruction at a school approved for the purpose by the Institute, and has passed an examination, conducted by the school teachers, in the science or art subjects allied to his technological subject. By a further alteration in the programme, candidates may in future, in subjects in which examinations are held in more than two grades, be exempted from the necessity of passing in Grade I. before proceeding to Grade II., if application is made on their behalf by the authorities of approved schools.

In regard to typography, the number of centres have increased from 36 to 39, the students in attendance have increased from 2,015 to 2,066, the candidates at examinations have decreased from 1,234 to 1,169, and the number of passed has fallen from 946 to 846. Lithography makes out a better case. The number of centres where it is taught have increased from 11 to 12, the number of students in attendance have risen from 381 to 421, the candidates at examinations have increased in number from 99 to 106, and there is a gain of seven in the number of passes—from 83 to 90. A table of details of passes and failures shows that in typography, out of 451 candidates in Grade I. 309 passed and 142 failed, or 31·4 per cent. of failures; and in other Grades and Final, out of 718 candidates 537 passed and 181 failed, or 25·2 per cent. of failures. In lithography, out of 30 candidates in Grade I. 24 passed and six failed, or 20 per cent. of failures; and in other Grades and Final, out of 76 candidates 66 passed and 10 failed, or 13·1 per cent. of failures.

From statistical tables relating to the London technological classes we note that at the Aldenham Institute, out of 167 students of typography in attendance, 99 candidates were examined and 63 passed. At the Borough Polytechnic, out of 301 typographical students in attendance 172 were examined and 128 passed. At the Regent street Polytechnic, out of 150 students of typography in attendance 97 candidates were examined and 68 passed. At the St. Bride Foundation Printing School, out of 324 students in typography in attendance, 239 candidates were examined and 167 passed; and out of 81 students in lithography, 51 were examined and 39 passed. At the London County Council Schools (sitting at various centres), 145 students in lithography were in attendance, no other information being given; but in typography there were 136 students in attendance, of whom 53 were examined and 44 passed.

The accompanying are extracts from the examiners' reports on the results of the examinations in typography and lithography:—

Typography.

The answers given to the questions are not quite so satisfactory as last year. It would appear that, with notable exceptions, the theoretical teaching is somewhat superficial and does not deal with the subject thoroughly. It is evident also in many cases that failure is, in a great measure, due to the low educational attainments of the candidates and from such poor material the instructors, cannot, of course, obtain the best results.

Now that "cost" is such a prominent point with employing printers, it behoves them to be more careful in the selection of their apprentices, to see that those apprentices receive systematic training in the factory, and that full advantage be taken of the instruction provided by technical classes.

In Grade I. a very general fault, and one which strikes the examiners forcibly, is that the answers to several of the questions were strikingly similar, as if the pupils had been taught to repeat certain phrases without grasping the meaning of them. This was especially noticeable in Question 6 (What is the difference between a stereo and an electro?). Ten per cent. of the students did not attempt to answer this question, and of those who did the majority gave answers which proved that they had no real knowledge of the subject. In Question 7 (locking up a form of four quarto pages), 17 per cent. did not attempt to reply, and such replies as were given showed more reliance on workshop experience than on technical instruction, such as, for instance, that the signature was to enable the compositor to find a certain form if he wanted to correct it. Sixty per cent. only of the students answered all the questions in this grade.

In Grade II. few of the papers deserve commendation, the majority being of mediocre quality and generally weak in arithmetic. It is evident that many of the students have a practical knowledge of the methods by which a certain result is obtained, but have no theoretical knowledge of why it is so obtainable. The object of the teaching should be to supersede the "rule of thumb" methods which are too often practised in the workshop, and to impart to the pupil such technical instruction as will enable him to understand the principles of his craft. Only 51 per cent. of the students answered all the questions in this grade.

In the Practical Examination it is to be regretted that many of the examinees did not comply with the instructions given for the setting of the tabular text. In the solid test, the words mis-spelt were those which are invariably spelt wrongly in actual workshop practice, few of the candidates proving equal to the task of rightly composing wrongly-spelt copy.

The attention of instructors is drawn to a general want of knowledge of the photo-engraving process displayed by examinees in the Final Examination. On the other hand, however, the questions relating to the grades and qualities of paper were intelligently answered.

Lithography.

Together with the slightly increased number of students who sat for examination this year, the examiner is pleased to report a marked improvement in the answers given to the questions set, more especially in Grade II. Greater care has been exercised in dealing with the actual questions. Much time has often been wasted in past years by students giving lengthy answers, having little or no bearing upon the subject under discussion.

GRADE I.—*Question 8** was little understood. Most answers treated of the permanence of the pigments, whereas the question dealt with opacity and transparency and the natural drying qualities. *Question 10*† distinctly pointed to a defect in the transfer ink, not to the surface of the stone, and the remedies suggested should have been confined to an alteration in the ink, not to etching the stone, etc. On the whole, the papers contained a very sound set of answers, showing distinct progress.

GRADE II.—*Question 3*‡ produced some very good answers, though several students are prepared to leave a zinc plate in a bath of nitric acid for two or three hours. Instructors should carefully explain the action upon zinc and aluminium plates and litho stone of the various acids commonly used in lithography. *Question 5*§ was extremely well answered, the drawings, though of a sketchy character, were well done, and quite sufficient for the purpose, indicating a clear knowledge of the principal features of the two machines. Taken as a whole, the papers were quite good.

FINAL EXAMINATION.—*Question 1*‖, upon estimating, was again the weak spot. Only two papers gave an intelligent answer to the time required to transfer two up of a demy poster, drawn on grained stones. Most candidates gave 1 or 1½ hours. A student should know the approximate time to pull a couple of demy transfers off a grained original stone, stick up, transfer and complete the machine stone. The value of ordinary M. G. poster paper varies little, and 2d. to 2½d. per lb. represents the extremes; yet prices were given ranging from ½d. to 8d. per lb. *Question 7*¶.—The answers were generally an elaborate treatise on collotype, whereas a brief account of the process was asked for. Its application to lithography was scarcely touched upon. Marked improvement was exhibited in the answers generally.

The acting examiners for the year 1912-13 were:—In Typography, Messrs. J. French and A. R. Closh; in Lithography, Mr. F. W. Seeley.

* "8. Give a list of three opaque and three transparent colours which have naturally quick drying properties."

† "10. If your transfer ink tints or scums the stone, what method would you adopt to remedy this defect?"

‡ "3. Describe the method of removing old work from a 30 by 40 zinc plate and of re-preparing it for transferring."

§ "5. Describe the difference between a rotary litho machine and a rubber offset machine. If possible, illustrate the principal features of each with a simple rough drawing."

‖ "In estimating the net cost of a job, what would you allow for the following items:—(a) To fit a stone in machine to register and to make ready: (b) to print 4,000 sheets of M.G. poster paper on a double demy flat-bed machine: (c) the time to transfer two up of a demy poster drawn on grained stones: (d) the amount of black ink for 4,000 sheets of double demy of an average theatrical four-colour poster which contains yellow, red, blue and black stones; (e) the price per lb. of an ordinary M.G. poster paper when bought in five ream lots?"

¶ "7. Describe the application of collotype to lithography, giving a brief account of the process of collotype."

THE late Rev. W. Bradbury, at one time a shareholder in the *Christian Herald* and various religious publications, has left estate of the value of £11,833.

Labour Statistics

FOR

PAPER AND PRINT.

The sixteenth Abstract of Labour Statistics of the United Kingdom, published by the Board of Trade, forms a most valuable work of reference, giving statistical data for a wide range of subjects. There is much specially relating to the printing and allied trades, and from this we have culled the following :

Fluctuation in employment is shown in a table giving the percentage unemployed in trade unions from 1871 to 1912. In the printing and bookbinding trades the mean annual percentage returned as unemployed in 1871 was 2·0, in 1912 it was 5·2. The lowest percentage in the intervening years was 1·3 in 1873, and the highest 5·7 in 1894. As compared with the general percentage of 5·2 in 1912, the London Society of Compositors was responsible for 8·8 per cent., the Typographical Association for 4·4 per cent.. and the London bookbinders for 5·4 per cent. unemployed. The L.S.C. percentage was higher than it has ever been.

The number of men and women registered at the Board of Trade Labour Exchanges, in the "paper, prints, books and stationery" trade group, was 18,343 in 1912, as compared with 18,558 in 1911. Of these 2,345 men, 4,103 women, 2,110 boys, and 4,418 girls were placed in 1912.

As the result of the First Census of Production, the following table of the output in 1907 in the paper, printing and allied trades, is given :—

Trade Group.	Net Output (see Explanatory Note on p. 52).	Persons Employed (Salaried Persons and Wage Earners, exclusive of Outworkers).	Net Output per Person Employed (exclusive of Outworkers).	Horse-Power of Engines at Factories.
	£		£	H.P.
Paper Trade	4,542,000	40,955	111	172,224
Printing and Bookbinding Trades—Private Firms and Companies	15,344,000	174,116	88	38,611
Printing and Publishing of Newspapers and other Periodicals	8,867,000	46,786	190	16,365
Typefounding, Stereotyping, Engraving, and Die-sinking Trades	666,000	6,519	102	680
Manufactured Stationery Trades—Private Firms and Companies	1,977,000	26,227	75	3,620
Cardboard Box Trade	1,114,000	21,368	52	2,288
Pen, Pencil, and Artists' Materials Trades ..	490,000	6,368	77	1,450
Ink, Gum, and Sealing Wax Trades	463,000	1,655	280	2,125
Trade Photography	119,000	1,011	118	210
General Post Office (Savings Bank Department) Printing and Envelope Factories...	4,652	37	126	‡
Ordnance Survey Department	63,908	433	148	‡

‡ The machinery used was entirely driven by electricity purchased.

Profit-sharing schemes have been adopted in the United Kingdom by 39 firms in the printing, bookbinding, etc., trades, and 26 firms have abandoned the system. There were 13 firms practising the system at June 30th, 1913, with 5,796 permanent employees, and 36 casual.

There were 37 cases of lead poisoning in the printing industry in 1912, as against 32 in the previous year, there being no deaths in 1912, as against 2 in 1911.

There were 31 fatal and 3,488 non-fatal accidents in the paper, printing, etc., trades, reported in 1912, the majority of these (12 fatal and 1,664 non-fatal) being due to machinery moved by mechanical power.

The number of associations of employers at July, 1913, in the printing and kindred trades was 92, 12 being federations and national associations, the remainder being local.

The statistics of trade unions only come down to the end of the year 1911, when there were 38 trade unions in the printing, paper, etc., trades, as compared with 40 in 1910. The membership was 77,252 in 1911, as compared with 74,275 in 1910. Seven unions in the printing and allied trades, with a membership at the end of 1911 of 58,077, had a total income of £220,956, or £3 16s. 1d. per member; an expenditure of £245,370, or £4 4s. 5¾d. per member; total funds at the end of the year, £169,421, or £2 18s. 4¼d. per member. Female membership of trade unions in these trades in 1911 numbered 3,257, against 2,725 in the previous year.

THE Board of Trade Labour Exchange during the four monnths ended November 14th received 1,498 applications for employment in the printing, stationery, paper and book trades, of which 804 were from women. The number of vacancies in those trades notified during the period in question was 948, of which 599 were from women. The number of vacancies actually filled through the Exchange was 736, of which 507 were taken by women. In the Juvenile Branch 862 vacancies were notified, 536 being for girls, and 669 were filled, 437 of them by girls.

Characteristics of India Paper.

Points to be Observed by the Printer in Handling the Stock.

One of the oldest and best papers made is that called India paper, and yet it is little known except to a very few. The formula for making it and the process by which it was made were for many years a secret known only to one mill, and all efforts to produce a similar paper in other mills were failures. However, patient endeavour was at last rewarded. Now good India paper is to be had from at least two different mills in England, one in Italy and one in the United States, and it is interesting to note that the American mill to solve the India paper problem in 1912 was the first mill in the United States to make wood pulp paper, which it did in the year 1854.

The essential requisites of India paper are opacity, light weight, low bulk, smooth finish, strength and a certain rattle called "tinniness." To embody all these characteristics simultaneously is one of the most difficult tasks in paper manufacture.

Opacity is the first thing users of India paper look for. If the printing shows through, the paper is of no use. Even with the most opaque sheet in light weight the utmost care is required on the part of the printer. His make-ready must be perfect; every line and border must be in register with the opposite side of the page. The utmost care must be exercised in printing. A dry ink is sure to give the best results. This does not mean that the average first-class printing establishment cannot do the work; for it can. It simply means that care must be given in making ready. The writer was recently informed of a printing job, in which sixteen hundred impressions per minute were run with great success, proving that production is not restricted by the use of light weight papers.

India paper must be kept for several days by the printer in a room where the temperature and humidity are approximately, if not quite, the same as in the printing room, and, better yet, if kept in the actual room where it is to be printed. This will overcome curling or "cockle," as it is known to the trade.

Attention must next be given to the grain of the sheet, which is in the same direction as the length of the paper while being made on the paper machine. The fibres, when run on the machine in many times their volume of water, naturally run out lengthwise, and a sheet has more strength and resistance in that direction than the other; but it is evident that the fibres will separate one from the other more easily than they will break. It is this characteristic which first makes it necessary to feed the paper across its grain to the printing press. This also brings the binding the same way as the length of the fibre, which makes a smooth flat book. The results when the sheet is printed "with the grain" the other way is to draw it into wrinkles as does a linen sheet when put through a wringer.

The use of India paper until within a few years was limited almost exclusively to Bibles, prayer-books and hymnals. Of late each year finds some publisher using it for new purposes, and always with great success. Now we find it used in printing the works of our standard authors and poets, the latest issue of our prominent dictionaries and encyclopædias, current literature, advertising matter, and mail order catalogues. One progressive advertiser changed from the heavy catalogue paper used many years in his annual catalogue to an inexpensive form of India paper, and saved over $20,000 on the issue, the principal item being seven cents in postage for each catalogue. A good illustration of the saving in bulk and weight over the paper heretofore used is found in the new edition of Webster's dictionary. The old dictionary measures 8½ inches by 11¼ inches, has 1,766 pages, and weighs 9 pounds 11 ounces. The new edition, printed on India paper, is size 9 by 12, has 2,624 pages, and weighs 6 pounds 13 ounces. The old edition is four inches thick, and the new edition two and a quarter inches thick. From this it is seen that a book with pages of approximately the same size, the number of pages has been increased about 850, the thickness reduced one and three-fourth inches, and the weight reduced nearly three pounds.

In addition to the advantage of small bulk and light weight, both of which are so important, India paper has a wonderfully soft, smooth surface. It takes line cuts, steel engravings and zinc etchings perfectly and very good half-tones. It has one more quality which is really remarkable, and that is it does not suffer from rough usage as one might think; it stands up under hard wear, and if badly crumpled by any mischance it can be smoothed with a heated iron, and made as good as new.—*Scientific American.*

THE commercial value of good taste, to buyers of printing, is marked by the rising demand for advertising managers, keen in their sense of appropriateness and expert in their knowledge of the harmonies of subject-matter with paper, type, form and colour.

¶ Of two catalogues, the same in purpose, but differing in quality, the one built on the laws of good taste will win by a margin big and decisive. Tests have proved this—and the truth of it is spreading.

¶ With this recognition has come an insistent call for men of good taste, and with the vision of its possibilities, who can plan, lay out, and put through the printing campaigns of high-grade houses.

¶ To such houses and to such men *The Graphic Arts* comes as a magazine full of suggestions, and educational features that stimulate good taste in all the factors that make for good printing.

United Kingdom	53,991	2·4	4·0	2·9	— 1·6	— 0·5

In London, employment was fairly good, and better than a month ago and a year ago. In other centres, employment was good generally and better than a month ago, overtime being worked at most centres. At Dublin, however, employment was not very good, while with lithographic printers at Edinburgh and with lithographic artists at Manchester it was slack.

COLONIAL.

There is said to be no demand for printers at Sydney (N.S.W.) or suburbs just now, and the same is the case in New Zealand, where the conditions in the printing trade lately have been quiet to fair.

FOREIGN.

From France, it was reported that employment in the printing trades during October was good, especially in the Provinces. In Germany, also, it improved, so that the percentage of unemployed amongst Trade Unionists in that line decreased from 7·4 (in September) to 5·8. In October last year it was 6·2. There was only a trifling upward movement in the Dutch printing trades.

Truscott and Son, Ltd., Suffolk-lane, E.C.; Groups 15, 16 and 19—Harrison and Sons, St. Martin's-lane, W.C. Scotland—Groups 1 and 3.—Neill and Co., Ltd., Bellevue Printing Works, Edinburgh; Group 2.—Morrison and Gibb, Ltd., Tanfield, Edinburgh; Group 4.—J. Skinner and Co., Ltd., 27-33, Thistle-street, Edinburgh; Group 6.—J. Hedderwick and Sons, Ltd., 22-24, St. Vincent-place, Glasgow.

Binding, etc., 10,000 copies "Instructions Relative to Licences."—J. Adams, 76-78, Gray's-inn-road, W.C.

Binding 6,000 copies "Text Book of Topographical Surveying."—E. Symmons and Sons, Ltd., Belvedere Works, Hermes-hill, N.

Binding, etc., 700 "Fortification Drawing Books," printing and binding 1,750 "Non-Money Order Sub-office Cash Books," ruling, printing and binding 600 Attendance Books for Indoor Officers, supplying 7,000 Portfolios 15-in. by 9½-in. by 2¼-in.—Drake. Driver and Lever, Ltd., Rosebery-avenue, E.C.

Binding, etc., 3,000 copies "Rules for Head Postmasters—Inland Parcel Post," binding, etc., 7,500 copies "Regulations for Magazines and Care of War Material, 1913," printing 2,250,000 copies Form 136 (Arrears Notice).—Harrison and Sons, St. Martin's-lane, W.C.

Binding 5,000 copies "Handbook for 4 in. Mark VII. and VIII. B.L. Guns, 1913," ruling, printing, and binding 750 "Army Book 211," ruling, printing and binding 1,200 "Army Book 233," supplying 200 Cases 10¾-in. by 15⅝-in.—J. Truscott and Son, Ltd., Dowgate Works, Tonbridge.

Mounting, etc., 700 Almanacs, pasting 770 Almanacs on boards, printing 1,500,000 copies "Record of Benefits Leaflet," printing and binding 9,650 Cash Books (Provincial Sub-office), printing and binding 1,200 Money Order Sub-office Cash Books, ruling and binding 1,000 Memo. Books, ruling, printing and binding 950 books "S.305," supplying 2,500 Millboards 26-in. by 21-in., supplying 100 Portfolios 13½in. by 9½in., supplying 2,000 Portfolios 13½-in. by 17½-in. by 2½-in., supplying 6,000 Spring Portfolios "S. 567," Waterlow and Sons, Ltd., Finsbury, E.C.

Printing Forms for Birmingham County Court.—M. Billing, Son and Co., Livery-street, Birmingham.

Printing 2,500,000 copies "Record of Benefits Leaflet."—W. P. Griffith and Sons, Ltd., 24, Great New-street, E.C., and Coldharbour-lane, S.E.

Printing and binding, etc., 2,000 copies "Vaccination Officers' Notices Q," ruling and binding 600 Memo. Books, ruling, printing and binding 1,500 "Army Book 239," ruling, printing and binding 3,000 "Army Book 315A," ruling, printing and binding 2,500 books "S.72," ruling, printing and binding 1,200 books "S.81," ruling, printing and binding 1,500 books "S.328," ruling, printing and binding 1,000 "Index to Church Marriage Registers," ruling, printing and binding 3,000 "Redirection Books," supplying 1,000 Millboards 13½-in. by 8¾-in.—McCorquodale and Co., Ltd., Wolverton.

Printing and binding 3,000 "Register of Births," ruling and binding 2,000 Memo. Books, ruling and binding 1,000 Note Books, ruling, printing and binding 2,700 books "S.553," ruling, printing and binding 2,000 "Clothes List S.264."—J. Rissen, Ltd., Clerkenwell House, E.C.

Printing and binding 75,000 Army Book 119.—Willmott and Sons, Ltd., 52-56, Bartholomew-close, E.C.

Ruling and binding 15,000 "Ciphering Books," ruling and binding 1,000 Memo. Books, supplying 1,000 Portfolios, 13-in. by 8½-in. by 1½-in.—Fenner, Appleton and Co., Ltd., 77, St. John-street, E.C.

Ruling, printing and binding 7,000 "Ships' Rotation Books, 237."—Whitmore, Ltd., Edmund-street, Birmingham.

Supplying 32,935 pads "Limited Service Tickets."—Glasgow Numerical Printing Co., 31, Finnieston-street, Glasgow.

Supplying 50,000 Plates "How to Test for Fire Damp."—A. S. Huth, 29, Huddlestone-road, Cricklewood, N.W.

STORES AND MISCELLANEOUS.

20,000 Glazed Blue Triplex Boards.—R. Craig and Sons, Ltd., Caldercruix Mills, Airdrie, N.B.

83,100 White Cards.—Tullis, Russell and Co., Auchmuty Mill, Markinch, Fife.

72,000 White Cards, linen centre.—Waterlow and Sons, Old Ford, E.

189,000 White Index Cards.—J. Spicer and Sons, Ltd., Red Cross Works, Red Cross-street, S.E.

Foreign Publications.—David Nutt, 22, Shaftesbury-avenue, W.C.

Graphs, Graph Composition, etc.—Printers' and Bookbinders' Supply Co., Edgware.

Insertion of Advertisements in the Quarterly "Post Office Guide" and in certain local Post Office Guides.—Sells, Ltd., 168, Fleet-street, E.C.

2,000 Post Quarto Manifold Books.—G. and T. Carlyle, 116, Duke-street, Liverpool.

U.S.A. Government Paper Supplies.

Conference of the Bureau of Standards.

A conference of government officials and papermakers, distributors, etc., was recently held at the Bureau of Standards, Washington, D.C., to endeavour to arrive at a more satisfactory plan for obtaining paper bids. Each item of the schedule was taken up in order at the conference and discussed by the manufacturers, on the one side, and the representatives of the Government on the other. Many suggestions were made and adopted, it being explained that the schedule was tentative, and of course subject to modifications.

As the discussion progressed it was very evident that there was a wide difference of opinion on the part of the Government officials who have charge of the paper contracts and the paper trade as to the proper commercial terms to be used for the various papers. This difference of opinion was also noticeable when the size and materials were under discussion. However, as stated, the result was that a tangible schedule has been worked out, and it is hoped that it will work to the satisfaction of all concerned.

It was plainly demonstrated that to follow a strict interpretation of the specifications as drawn, would prevent the Government obtaining better goods than it had contemplated. The discussion was most thorough, and included every point covered by the paper trade, material, durability, strength, etc.

One authority says:—"In adding the 'opaque' provision to all the other provisions, it would seem that the buyers who have in charge the purchasing of paper for the Government Printing Office are doing their best to reduce the number of bidders as much as possible, instead of increasing them. In other words, it simply disgusts the paper manufacturers with the many useless provisions, which only provide a reason for rejection on the slightest and flimsiest excuses. If any commercial concern in the United States sent out specifications for a million pounds of paper surrounded with the same provisions and conditions as the specifications of the Government contain, they would not receive a single bid. However, it is hoped that the Government's representatives have had their eyes opened to the importance of doing business on business principles, and that as result of the conference the manufacturers and supply men will be able to know just what Uncle Sam really wants."

Surrounded as they are by so many impossible provisions and incongruities, the larger manufacturers are inclined to pass the specifications up. As a matter of fact—as was developed at the conference—some of the requirements are so small that the average buslness man would not waste the time in considering the schedules at all. Like many other branches of the Government, those having to do with the paper question seem to be stumbling after something they know they want, but do not know just how to get it.

THE December number of the *International Theosophical Chronicle* opens with a verbatim report of an address delivered by Mrs. Katherine Tingley to a large audience assembled at the Copley-Plaza Hotel, Boston, Mass. Her subject was "Some Vital Problems of the Age from the Theosophical Standpoint." She urges reform in the modern home and discusses new views of marriage. Dr. Lydia Ross writes on "Womanly Work for Peace," and a noteworthy article is contributed by the late William Jameson on "Theosophy, the Unifier of Religions." The illustrations, which in this magazine are always of an excellent quality, show scenes in Germany, Sweden, Japan, Cuba, and a fine panoramic view from Point Loma, California.

Trade Notes.

WE understand that Mr. Robert Ritherdon, the editor of *Lloyd's Weekly Shipping Index*, will retire shortly. He has edited the *Index* for 25 years.

A RECENT report on German strikes and lockouts last year shows that in the printing and paper trades 10,617 persons were affected by disputes of this character, as compared with 3,836 in 1911.

We understand that Mr. Bennet Burleigh, the veteran war correspondent of the *Daily Telegraph*, is to retire at the end of the year. Mr. Burleigh has been connected with the staff of the *Daily Telegraph* since 1882.

EMPLOYMENT in the German bookbinding trades improved somewhat during October, so that the percentage of unemployed amongst trade unionists in that line fell from 3·0 (in September) to 2·3. In October, 1912, it was only 1·8.

LEAD POISONING.—Two cases of this nature were reported to the Home Office from printing establishments last month, making a total of twenty since the beginning of this year, against thirty-three in the corresponding period of 1912.

THE annual meeting of the Edinburgh and East of Scotland District of the Newspaper Press Fund was held last week, Mr. Robert Wilson presiding. It was reported that this year—the Jubilee year of the fund—226 new members had been added to the roll, and that up to the end of November the grants and pensions for the year amounted to the record total of £5,951.

AN association of newspaper proprietors has been formed in North Wales and Shropshire for the defence of mutual interests. The first president is Mr. S. G. Jarman, proprietor of the *North Wales Guardian*, and the first vice-president is Mr. J. S. Edwards, of Bangor, editor and manager of the *North Wales Chronicle*. Mr. C. P. Gasquoine, of the *Oswestry and Border Counties Advertiser* is the hon. secretary.

THE *Board of Trade Journal* states that the Commercial Intelligence Branch of the Board is notified by the Bulgarian Legation in London that the Ministry of Finance is prepared to contract, by private arrangement after competition, for the printing and supply of 281,600,000 postage stamps of all denominations. A copy of the Cahier des Charges (in French) may be seen by printers and engravers in the United Kingdom at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall-street, E.C.

AT the Salford Bankrutcy Court, the official receiver (Mr. Grant Gibson) mentioned to Mr. Registrar R. Forrester Addie the case of Messrs. Vick, Ashworth and Co., printers, of Salford, which had previously been before the Court. He stated that he had been informed by the trustee that arrangements had been made to take over the business as a limited company, and that the liabilities would be met in full, 7s. 6d. in the pound being paid almost at once, 7. 6d. in June next, and the remaining 5s. on December 1st, 1916.

ST. JOHN AMBULANCE BRIGADE.—Sir James Bell, Town Clerk to the Corporation of the City of London, has notified Mr. Arthur O'Connor, Secretary to the Printers' Medical Aid and Sanatoria Association, that the City Lands Committee have agreed to place at the disposal of the newly-formed City of London (or Printers) Division of the St. John Ambulance Brigade, the Courtyard of the Guildhall, one evening a week for drill purposes. The headquarters of the Division is at the offices of the Printers' Medical Aid and Sanatoria Association, 68, Fleet-street, E.C., and first aid classes will be resumed by the Association early in the new year.

TENDERS WANTED.—Tenders will shortly be invited by the Corporation of Birmingham for supply of stationery, printing, bookbinding, envelopes, typewriting materials, miscellaneous stationery supplies, and office sundries in sectional parts. Established firms in a position to tender, under the conditions regarding standard rate of wages, etc., required by the Council are invited to place their names on an accepted list of contractors, so that upon the issue of the respective sections of the contracts they may be advised and given an opportunity to tender. Particulars from Mr. G. E. Kee, Stationery Department, Council House, Birmingham. For general printing for the Wandsworth Borough Council, form of tender from the Council House, Wandsworth, S.W.

MISS ETHEL EMILY REDWAY, a young lady of 18, described by her counsel as a dancer at high-class entertainments, and living at Putney, was last week awarded 50 guineas damages, for libel by an illustration, against the Amalgamated Press by a King's Bench jury. Defendants admitted publication of the libel, and pleaded an apology. No evidence was called for the defence.

ACCORDING to *Kemp's Mercantile Gazette* there were five failures in the printing and stationery trades of England and Wales for the week ending Friday, December 19th; the corresponding week in 1912 showed three.

THE "Encore Annual" is a big volume of about 280 pages full of interesting matter and illustrations appertaining to the members of the theatrical and music hall profession. It is well got-up and printed, and in the matter of advertisements has a wonderful show. The price is sixpence, which isa very low charge for such an entertaining budget.

DISSOLUTION OF JOINT STOCK COMPANIES.—A notice appears in the *London Gazette* for the 19th inst., to the effect that, at the expiration of three months from that date, the following companies will, unless cause is shown to the contrary, be struck off the Register of Joint Stock Companies, and thereby dissolved:—

Advert Design Service, Ltd.
Beckamper Printing Co., Ltd.
Grand Chic Publishing Co., Ltd.
Guaranteed Discount Advertising Co, Ltd.
Merton Printing Co., Ltd.
Pencil Pointer Co., Ltd.
Porthcawl Advertising Co., Ltd.
Rubber Securities Press, Ltd.

KLIMSCHS JAHRBUCK, 1914.—The fourteenth volume of this beautifully got-up and instructive year book comes to hand, and is full of interest to all engaged in the printing and kindred trades. There are a number of signed articles describing the progress of the various arts and crafts associated with paper and print, and a great deal of space is given to developments in machinery. A useful and attractive feature of the volume is the numerous and finely printed illustrations. Towards the end of the volume is a chronologically arranged summary of the events in the German printing world of the previous twelvemonths; a catalogue of the trade literature that was published, and a list of the German patents issued from July, 1912, to July, 1914. At the end of the book are a number of examples of various printing processes. The publishers are Messrs. Klimsch and Co., Frankfurt on Main, Germany.

A PRINTER'S SICK FUND.—The employees of the London and Norwich Press, Ltd., at their works in Norwich, have a Sick Fund, managed by an honourary secretary and committee, its object being to financially help for a certain period any of its members who are laid aside by illness. At the close of the year whatever surplus is left is equally divided amongst the members, the only amount retained being a donation of £20 from the directors, which forms a Reserve Fund. The hon. secretary (Mr. A. J. Page), in his report to the recent annual meeting stated that the amount paid in during the past year was over £42, and sums paid out in Sick Benefit, etc., amounted to £20, The Balance was apportioned in equal shares, and amounted to five shillings and eightpence per member. One of their fellow-workers had been very seriously ill and had had a most trying time; he had drawn from the Fund the amount stipulated by the rules, but when the case was brought before the managing director of the company (Mr. H. Wingfield, M.A.), who always takes the keenest interest in the welfare of the employees, he generously promised to give seven shillings and sixpence per week if the employees would raise a similar amount. This was readily done, and the annual meeting accorded to Mr. Wingfield a very hearty vote of thanks for his kindly act.

IN the City of London Court, last week, before Mr. Judge Lumley Smith, K.C., Fisher and Collier, Ltd., proprietors of the *London Golfer* and the *Midland Golfer*, 75, New-street, Birmingham, sued Mr. George Arthurs, Mr. W. W. Cousins, and Mr. J. Ingram, on behalf of themselves and the members of the Inventors' Guild, 12, St. Bride-street, engineers, for £15 for advertisements inserted in both newspapers. Mr. Beasley appeared for the plaintiffs and Mr. Sanderson for the defendants Arthurs and Cousins. Plaintiffs' case was that the orders were for six insertions in each paper at £3 a month, and five had been inserted. Mr. J. L. Fisher said that a proof of the advertisement was sent to the defendants before inserting the advertisements and voucher copies were sent. Defendants altered the wording during the run of the advertisements. In cross examination he said that Digby, the canvasser who took the orders, had no authority to say that the circulation of the journals was 10,000 copies monthly. There was nothing about the circulation in the written order. Defendant Arthurs said Digby told him very distinctly that the circulation of the journals was 10,000 copies each. That was why he gave the order. Digby told him that the particulars of the circulation would be sent on after he signed the order. No one did anything with the Guild except himself. Cousins and Ingram had nothing to do with it. Cousins was his landlord. Mr. Cousins said he was not a member of the Guild and he had nothing to do with giving the order. Judge Lumley Smith, K.C., said that judgment must be given for Cousins with costs; as to Arthurs, judgment must be given against him with costs. There was no proof that the circulation was not 10,000 copies monthly.

MR. WILLIAM T. INNES, founder of the Philadelphia printing firm bearing his name, has died at the Jefferson Hospital in the city as the result of a stroke of apoplexy. He was born seventy years ago in Muhlenberg, Vt. He spent several years as a tramp printer, working at the case in various newspaper offices, and then founded the large printing firm of which he was head.

SOME interesting statistics in regard to the printing and publishing industry of the United States are presented in detail in a bulletin just issued by Director Harris, of the Bureau of the Census, prepared under the supervision of W. M. Steuart, chief statistician for manufactures. In 1909 the number of establishments in the industry, as a whole, was 31,445; the number of persons engaged was 388,466 of whom 258,434 were wage earners; the capital invested amounted to $588,345,708; materials cost $201,774,590; and the value of products was $737,876,087.

INCOMBUSTIBLE PAPER.—For the impregnation of thin papers, such as fine tissue paper, etc., ammonium sulphate is the least expensive and the best product. The concentration of the solution varies from 15 to 20 per cent., according as the paper is more absorbent, or harder. The best method of impregnation is to employ a brush humidifier on each surface of the paper. This arrangement could be applied to the paper machine between the two last driers, but this method would be practicable only when the paper machine moves very slowly. Moreover, the orders being, as a rule, insignificant, it is preferable to conduct the impregnation separately. Another authority adopts the following solution: 40 parts of phosphate of ammonia, 40 parts of sulphate of ammonia, and 10 parts of chloride of magnesium.

St. Bride Foundation Printing SCHOOL.

A Half Session's Work.

The critic of technical classes in the printing trade would have learned a useful lesson, tending to a modification of his views, had he paid a visit to St. Bride Institute on any day from the 17th to the 20th of this month. An exhibition of students' work was held there on those dates for the purpose of showing the sort of work that is being done in the practice classes, examples being displayed in one of the rooms of the Institute of what had already been accomplished during the half session just then drawing to a close.

The first half of a session is not usually the most favourable part to choose to select specimens of students' work for exhibition purposes, but no one could have helped being agreeably surprised at this interesting St. Bride display, not because of its quantity so much as the really serious industry and individual thought which it all connoted. Mr. J. T. Riddell, the Principal of the School, is a hard worker and an enthusiast in his profession; he expects and what is more he seems to succeed in obtaining the same enthusiastic devotion to work from those who have placed themselves under his guidance. He is keen on familiarising his students with the more difficult work that is to be met with in the average printing office, so that in their later

experience when they are up against a poser they will know to tackle it sucessfully.

Each printing student at St. Bride's has to be the architect of his own work, and there were many exceedingly neat and well thought out sketches of the type display work individual students had in hand, the idea being to bring out their own ideas and endeavour to develop them along correct lines, demonstrating to them the advantages and the strength of simplicity.

Some very fine drawing on stone by students of the Bolt-court Litho School had been printed by St. Bride students with very commendable results. It is interesting to note that every student here has the opportunity of working on stone, zinc and aluminium, and in the Honours Grade they have the opportunity of doing collotype and photo-litho work. They are also trained to pull copperplate transfers and reverse them if necessary for offset printing. One of the exhibits was a large negative which had been taken of an original head study, and was put on to zinc and printed by the students by the offset method.

With regard to bookwork, the student has not only to lay out his job, but he is also taught imposition thoroughly. For instance there was an exhibit of eight pages of book work on a sheet that had been imposed as well as printed by the students.

A fine piece of half-tone printing and a good example of difficult work that must have tested the students' abilities so much that it cannot fail to have left a valuable and lasting impression on his mind, is a sheet printed with eight different blocks, each of a totally different character, and each requiring a particular treatment. They include reproductions of a delicate pencil sketch, half-tones from engravings and oil paintings, and a vignetted subject. One specimen is printed on a white glazed paper, and side by side with this was a specimen printed on a toned dull mat-surface paper which gave twice as much trouble and used double as much ink. It is Mr. Riddell's intention later on to print the whole of this on a sheet in colours and under the same conditions. So that it will be seen that the students are taught to handle some of the most difficult work and produce successful results.

Another branch of instruction is in relation to tint block printing in display work. The student is taught how to cut out his own blocks, from some sort of linoleum surface, and an example of this was shown for a job in three printings.

Then there were compositors' lay outs and proofs for Christmas cards, and some very painstaking, skilful and artistic work was shown in this connection. Mr. Riddell believes there are great possibilities in the lads attending the technical classes, and he is striving his best to realise them and produce a better all-round printer.

Trade Boards Act, 1909.

The Board of Trade have made an order, dated December 8th, 1913, making obligatory the minimum time-rates of wages for male workers in Ireland employed in the making of boxes or parts thereof made wholly or partially of paper, cardboard, chip, or similar material, fixed on June 6th, 1913, by the Paper Box Trade Board (Ireland). These rates are 6d. per hour for male workers other than learners, and from 4s. 6d. to 24s. per week of 52 hours for male learners, according to age. Any agreement for the payment of wages at less than the above-mentioned minimum rates, clear of all deductions (other than those properly made under the National Insurance Act), will henceforth be null and void. The penalty for paying wages after December 8th at rates less than those which have now been made obligatory by the Board of Trade will be a fine not exceeding £20 for each offence; and, in addition, the worker will be entitled to all arrears, calculated on the basis of the minimum rates. In certain circumstances, however, the Trade Board may, in the case of time-workers who are affected by infirmity or physical injury, grant permits exempting their employment from the operation of the minimum time-rates.

Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be endorsed "PATENT DEPARTMENT," Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C. Telegrams: Stonhill, Fleet, London.

Applications.

28,040 LANG, A. B. D., and POWELL, J. A., apparatus for displaying announcements, advertisements and the like.
28,090 GILL, J. W., construction of folding trays or boxes made from sheets of cardboard or like material.

The First Christmas Card.

AS USUAL at this Christmas season the question as to who invented the Christmas Card? has been dwelt upon in several periodicals. Like the pictorial post card there are a good many claimants in the field for the honour of the invention of this symbol of good-fellowship, Some authorities hold that the Rev. Edward Bradley ("Cuthbert Bede") was the first to design a picture card with a Christmas greeting, and in 1845 he sent a Christmas card design to a firm of Newcastle printers, Messrs. Lambert, to be printed for private circulation amongst his friends. Another claimant for the honour of producing the first card was the late W. C. T. Dobson, R.A., who in December, 1844, made a sketch symbolising the spirit of the season, with the words "A Merry Christmas and a Happy New Year to you." The idea caught on so well that the following year another card was designed. Others followed the example, and eventually an enterprising publisher, seeing profit ahead, took up the production of cards, and from that time till now the trade has grown enormously, and the year's production amounts to many hundreds of millions, while the vogue of sending cards has attained a world-wide practice. As to the actual inventor of the custom, which has become such a universal one, in view of the existing evidence the honour must go to Mr. Dobson.

The Necessity for an Inventory.

THE neglect or carelessness of many printers in keeping an inventory of their plant and material is a matter that is often referred to in the trade journals, but with little success in leading the erring ones into the right path, until, possibly, a fire takes place and a settlement has to be come to with the insurance company, when woe to the man who is not prepared to substantiate his claim by a written record of all his belongings. To many printers the taking of an inventory seems a big undertaking. They neglect it, excusing themselves day after day with the argument that they cannot spare the time, or do not want to go to the expense which the taking of an inventory requires. They forget that it is the first essential in ascertaining whether the business is heading towards success or failure, and this is true whether the business be large or small. Generally speaking, the proper basis for taking an inventory is the buying cost, but should the value of the merchandise, when the inventory is taken, be less than the cost, the actual value and not the cost should be the inventory figure. On the other hand, if the goods cannot be replaced at their cost, that is, if they have advanced in value, it is then safe to have this difference shown. The inventory is the first thing that the fire insurance adjuster calls for when he comes to adjust a loss. Without it, any business man would have difficulty in making up a proof of claim satisfactory to the insurance company.

* * *

British Imports of Reel Paper.

DURING the present year the imports of reel paper into the United Kingdom show an increase, the total value for the eleven months ended November amounting to £1,367,875 as compared with £1,327,089 for the corresponding period of last year. The shipments from Newfoundland to this market are now of an important character, the value for the last eleven months being £427,036, as compared with £452,750 and £236,338, the values of the supplies from Norway and Sweden respectively. Compared with the corresponding period of last year, the trade of Newfoundland shows an increase of £76,142, and evidently this competition has severely hit the Swedish mills, as their shipments to the United Kingdom show a reduction of £74,974. Norway, however, has maintained her trade, her exports being better by £7,165. More attention has been given to the requirements of British consumers of reel paper by German mills, as the eleven months' values show an increase from £70,682 in 1912 to £116,583 this year. More profitable markets than the United Kingdom evidently attract the United States, as the receipts from that source have fallen from £27,331 in 1912 to £18,126 this year.

* * *

Empire Information Bureau.

AN interesting development has taken place in connection with the Information Bureau now being organised as a department of the Royal Colonial Institute. The Bureau has been organised with two distinct purposes in view, namely, to deal with inquiries made personally or by letter to the Institute, and to distribute information concerning the resources and opportunities for trade and enterprise that exist in the Over-Seas Dominions of the Empire. Reviewing shortly the first purpose of the Bureau, enquiries will be answered from the information at the disposal of the Institute concerning—(a) The resources and opportunities for trade, enterprise and employment in the Over-Seas Dominions of the Empire. For this work there will be a distribution to applicants of official pamphlets of the self-governing Dominions, and the publications of Crown Colony Governments, Chambers of Commerce, Boards of Trade Over-Seas and such official and semi-official literature. (b) Empire transportation and intercommunication. For this work circulars, time-tables and pamphlets will be available for distribution. (c) The facilities and amenities of life in the Mother Country.

Cellophane.

A New Cellulose Wrapper for Food Stuffs.

A new French commercial product, styled cellophane, is a pure cellulose film, obtained by precipitation of xanthate of soda attacked by acids or mineral salts, and intended as a substitute for tin or aluminium foil as a wrapper for foods and other products.

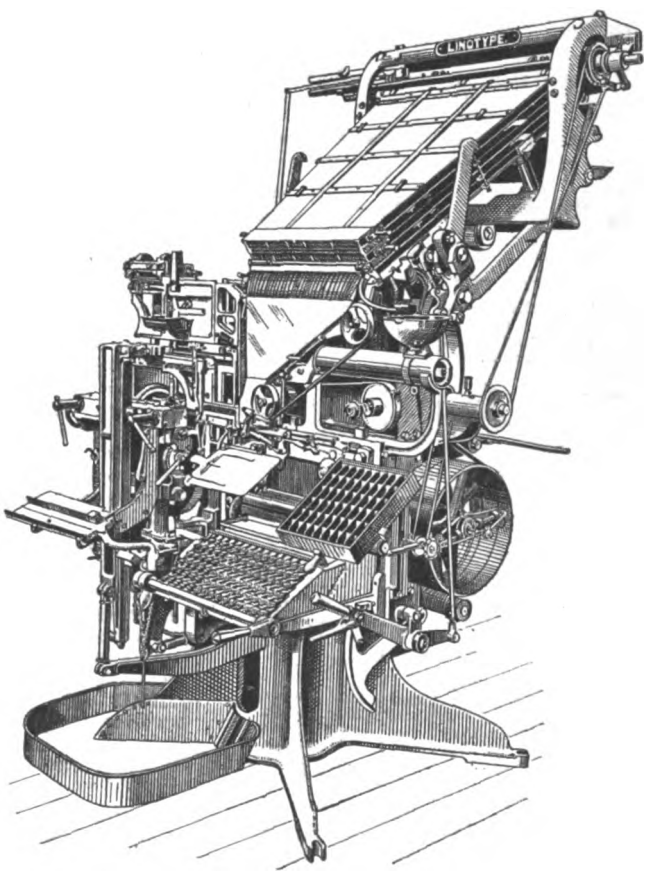
The manufacturer, anxious above all to be on proper terms with the authorities for suppression of fraud, invited the criticism of the Minister of Agriculture and the Higher Council of Agriculture, and, after investigations by Professor Bordas, the new product has been approved.

The report of Professor Bordas enumerates the properties of the commercial types of cellophane which were submitted to him for examination. Two varieties are colourless, and are styled emerosine and cellatine; two others, saphyrine and libellula, are dyed yellow with diamine catechins, which are benzidine compounds dianotised with phenol or salicyclic acid or sulpho-amido-naphthols combined with benzol or di or triamide.

The exact nature of the dye employed was not determined, but the saphyrine very easily loses its colour in water, which rapidly tints the silk (used by chemists for examination of artificial dyes for fibres or aliments) a golden yellow. Libellula yields its dye less readily in water, but it tints silk.

To give these films the required pliancy very minute quantities of glycerine are incorporated with them.

Practically cellophane may be regarded as pure cellulose. It burns like paper, with a residue of insignificant weight, non-explosive, insoluble in boiling water, indecomposable in air, neutral, odourless, perfectly tasteless. It can easily be sterilised, as neither aspect, texture, nor solidity are affected when it is kept 45 minutes in a humid atmosphere at over 150 degrees C. (302 degrees F.). Unaffected by odour or fats, it is, however, attacked by acids, concentrated alkalies and Schweitzer liquor.



Thus, from the hygienic point of view, cellophane seems clearly superior to the various kinds of paper, including tin and aluminium foil, for foods. It even seems preferable to bladder for sausages.

Nevertheless, the Council of Hygiene considered it necessary, whilst admitting the various meritorious points in cellophane, to draw the attention of the Minister of Agriculture to the colouring matter of saphyrine and libellula, which easily stains objects. This is a serious inconvenience in France, where most of the alimentary products must be free from artificial colour, though it can easily be remedied.

THE calendar issued by the *Belfast Evening Telegraph* group of newspapers is a very neat production, on the upper portion of which is a remarkably well-executed reproduction of a painting of Red Bay, county Antrim, delightfully printed in colours, and enclosed in a bold gilt border. The dates are on white figures on a chocolate ground, and are attached to the bottom portion of the card.

Financial.

Offices of the *British and Colonial Printer and Stationer*,
58, SHOE LANE, LONDON, E.C.
TUESDAY, Dec. 23rd, 1913.

AN active demand for money and ample supplies of credit have characterised the money market this week, though latterly the demand has lessened, thus augmenting the supply. The discount market has been a little easier in tendency. The principal movements in the bullion market this week have been the purchase of £149,000 in bar gold last Thursday and the receipt of £300,000 from Egypt on account of the Secretary of State for India. Stock markets continued dull till near the end of last week, a better tendency setting in on Saturday, the market favouring a rally in spite of the prospect of further new issues. Consols are steadier after the recent depression.

Business continues very restricted in the miscellaneous industrial market, with a dull tone prevailing. In the section relating to paper and print business is still quiet, but movements have been mostly upwards, though small. The only fall to date occurred last Wednesday, *Illustrated London News* and *Sketch* Deb. dropping 3. Rises have taken place in Cassell and Co. of ½, in Edward Lloyd Pref. of $\frac{1}{32}$, and in Waterlow and Sons Pref. Ord. of ¼. Business has been done during the past seven days in Amalgamated Press Pref. at 20s.; in Associated Newspapers Pref. at 20s. 6d. and 20s.; in Cassell and Co. at 5½, 5⅝, 5½ and 5¼; in Ilford Pref. at 17s. 6d.; in *Illustrated London News* and *Sketch* Pref. at 14s.; in Lanston Monotype Corporation at 11s. and 11s. 3d.; in Edward Lloyd Pref. at 22s. 6d., 21s. 10½d., and 21s. 10¼d.; in C. Arthur Pearson Pref. at 8os.; and in Spicer Bros. Pref. at 8⅞.

COMMERCIAL INTELLIGENCE.

Re WALTER EDWARD KIMBER, Printing Machinery Agent.

The first meeting of creditors was held last week, at the London Bankruptcy Court, under the failure of this debtor, who carried on business at Rugby-chambers, Great James-street, Bedford-row, W.C. A statement of affairs was submitted showing liabilities £828 2s. 8d. against assets valued at £62 19s., and consisting of cash, £58 5s. 8d., and book debts estimated to produce £4 13s. 4d. The official receiver reported that it appeared from the debtor's statements that from 1894 till August, 1910, he was employed in the printing machinery and allied trades, and in the latter month he started business on his own account as a printing machinery agent at Hampden House, Phœnix-street, N.W. He sometimes sold on commission terms and sometimes on his own account. He had no capital to start with, but had instead a trade connection, which he had acquired whilst in employment. The business was not a success, owing partly to lack of capital, and partly to his bad health. In October, 1912, he removed the business to Rugby-chambers, where he traded until he filed his petition on November 27th, because certain of the creditors having obtained judgment, attached his credit balance at the bank under a garnishee order nisi. The failure was attributed to want of capital, loss on the trading in consequence of ill-health, and immediately to the garnishee order referred to above. In the absence of any proposal the case was left with the official receiver to be wound up in bankruptcy, the debtor's public examination being fixed for January 30th, 1914.—

Appended is a list of the principal creditors:—

UNSECURED.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIPS DISSOLVED.

BOLD, GILL and MASSEY, Blackley, Manchester, paper stainers and embossers, etc. Debts by J. W. Bold and J. W. Massey, who will continue to carry on the business under the style of Bold and Massey. August 31st.

MELDRUM and HUGHES, 22, Cooper-street, Manchester, printers, engravers and stationers. Debts by T. S. Meldrum, who will continue to carry on the business at the same address. W. H. Hughes will trade in his own name at 281, Deansgate, Manchester, as a printer and stationer. November 1st.

THE BANKRUPTCY ACTS, 1883 AND 1890.

RECEIVING ORDER.

GIBSON, G. D., 25, High-street, Buxton, bookseller and stationer. Date of order and of adjudication order, December 16th, made on the debtor's own petition. First meeting of creditors, December 30th, 11.30 a.m., at the Official Receiver's Offices, Castle-chambers, 6, Vernon-street, Stockport. Public examination of debtor, January 16th, 11 a.m., at the Court House, Vernon-street, Stockport.

Institute of Printers and Kindred TRADES.

Bohemian Concert.

Of the many worthy aims of the Institute of Printers and Kindred Trades perhaps the most prominent and certainly not the least important is that of promoting and fostering social intercourse amongst those engaged in the crafts. On Wednesday evening last week a highly successful bohemian concert was given at the headquarters, the St. Bride Foundation, and the accommodation provided in the Large Hall was taxed to its utmost by an audience that was hearty in its appreciation of the excellent entertainment provided. Mr. H. J. Goss, chairman of the Council, presided, and was supported by many prominent members of the Institute.

Mr. James Kift, the conductor, began the programme with a lively pianoforte solo, "Galop de Concert" (C. Mayer), and was followed by a splendidly rendered baritone song, "At Santa Barbara," by Mr. Reginald Johnson. In the second part Mr. Johnson was deservedly encored for his excellent interpretation of "Up from Somerset." Miss Phyllis Ross sang the pretty song, "Somewhere a Voice is Calling," and in her second turn she gained an encore for the equally pretty song "My Ships," responding with "My dear Soul." Mr. Albert E. Axbey contributed two capital songs in a pleasing manner, "Young Tom of Devon" (encored) and "Clackety Clack." Miss Constance Wentworth was also well received for her two soprano songs, "Here's to Love" and "Ferryman Love." The humorous element was strongly represented. Miss Olive Fox won a popular reception both for her song at the piano, "Sophie," and another humorous song for which she was recalled, and gave "His dirty little hands" with touching effect. Three other humorous turns made quite a national appeal. Mr. Alfred Hurley, with his humorous song and Irish stories well told in good Irish brogue; Mr. Hector Gordon, with his humorous Scotch interlude, songs and stories, in genuine Doric, and Mr. Chas. Wreford, with his humorous English recitation, "Jarge," were all capital, and needless to say were vociferously encored. Each proved his versatility in the second half of the programme, Mr. Hurley with a humorous lecture, "Old Mother Hubbard," in clerical costume; Mr. Gordon, with a clever whistling solo, and Mr. Wreford, with a comic American recital.

At an interval in the programme, the CHAIRMAN drew attention to the annual Juvenile Party to be held at the Institute on New Year's Day, at which the Council were making an innovation in introducing fancy dress for children, for which prizes will be given, and to which the Lord Mayor, Alderman Sir T. Vansittart Bowater, has promised to come in State, accompanied by the Lady Mayoress. Also that the annual dinner had been fixed for May 26th, 1914. He concluded by wishing the members and friends a merry Christmas and prosperity individually and collectively.

Mr. C. J. DRUMMOND proposed a hearty vote of thanks to Mr. Goss for the excellent concert he had provided, and for the kind attention he had given to the business of the Institute, the vote being enthusiastically carried.

The CHAIRMAN, in acknowledgment, paid tribute to the whole-hearted support he had received from all of the members.

An enjoyable evening's entertainment was brought to a close with the singing of the National Anthem.

Printing Crafts Guild.

There was a large party on Friday last at the extensive newspaper printing works of Messrs. E. Hulton and Co., Ltd., Withy-grove, Manchester. The composing department, which contains one of the largest linotype installations in the world, was the first to receive attention, then the matrix department and general composing department, where monotypes are installed, were inspected. The general jobbing press-rooms were busy producing excellent half-tone magazines, the overlaying being mechanical and hand-cut. The party then entered the stereo foundry, and saw three autoplates mechanically turning out stereos at the rate of three per minute. In one corner of this room a "Junior" was busy helping the three "Seniors" to meet the call of the press-room in this mammoth establishment. In the newspaper machine-room the employees were getting the presses ready, or running off the early editions of the morning papers. The photographic department on the topmost floor received special attention, and through the kindness of the manager of this department of the firm of Hulton and Co. the visitors obtained a description of how the photographs are received and despatched, everything being handled with such precision that half-minutes were carefully accounted for. The average business man gets irritated if the train should be late in carrying his daily newspaper to the town where he resides; yet, if he saw the wonderful organisation of a large newspaper establishment he would receive a great surprise in trying to work out how it is possible to place a newspaper before the public for the modest half-penny or penny. We have often heard the phrase "that a visit to the metropolis would open the eyes of the provincial newspaperman"; but if a test were made *vice versa*, we are sure that our metropolitan friends would be compelled to take off their hats to the progressive provincial firm of Messrs. E. Hulton and Co., Ltd.

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help a..d an ornament thereunto."
FRANCIS BACON, Baron Verulam.

Heartiest season's greetings to all readers. We have had a good year on the whole in 1913. This is the time to think more particularly of some who have not done so well.

o o o

Its not the easiest thing to give in the right direction. I'll tell you one opportunity that is unexceptionable.

o o o

I want to pass on a bit of season's helpfulness to a one-time master printer, Mr. W. J. Eden Crane. He's very old now, nearly eighty; and infirm; and in great need. My personal interest connects with service which for some years (until about six or seven years ago) he rendered to the craft as a trade journalist. Turn up old volumes of the Printers' Year Book up to about eight years ago and you'll find article after article from his pen.

o o o

I have with great delight done just a little for him, I have received a little too and passed on to him. Anyone who will send me to this journal a Season's gift for my old friend will receive his or his daughter's written acknowledgment.

o o o

After writing these "Quads" so many years I feel, and indeed know, that I have many personal friends among their readers; so I'll just add one personal word. I've had a little Christmas gift myself which has been particularly welcome.

o o o

My second son, not yet 21, came bustling up the office stairs last week to let me see him put on his hood and gown as Bachelor of Science. He had won the degree very handsomely; but I'm not sure that we ought to know quite as much as we do as to the exact placing in the various lists. I will only say that he ended up—like his name, O.K.

o o o

His young sister (herself a matriculated student) happened to come in and curtseyed to the new bachelor; arrayed as Solomon was not, for all his glory. "Father should bow, too," she said. "No," said the lad; "it should be the other way about."

o o o

Another son, this year, at 22, won the Fellowship of the British Optical Association and was second in the Empire, and a substantial prize winner in another examination conducted by the Spectacle Makers' Company of the City of London. They presented him with his Diploma because of the position he took, instead of calling for the usual guineas for that valuable document.

o o o

I have to be careful in making even verbally any statements on matters comprehended in their respective purviews of knowledge. Is there not an old text, "Be sure your sons will find you out."

o o o

Well, gentleman, may your sons and daughters also give you the same satisfaction and pay the same regard. May we all be happy in all relations but happiest in our homes.

o o o

I see that Mr. John Geddes has been lecturing again at Dublin upon the distinctive movements of printing machines. I think he has four or five times rendered the like service in widely remote centres. I have always learnt something from every talk with Mr. Geddes, and every reading of a report of one of his talks, and I am glad to see him coming into his own as one of the personal forces and the sound guides of printerdom.

o o o

Mr. Geddes went to the States a few years ago at his own cost simply to add to his mastery of printing technique.

o o o

He employs Messrs. John Haddon and Co. to carry out his contracts. They would tell you that they employed him; that he was their representative in Scotland and Ireland and the north of England. Nary a bit of it. He employs them; though aw'm thinkin' he'll forbye be speerin' at me the noo, for why aw'm writin' i' that gait.

o o o

A' weel its nae mair I'm meanin' than just this that ilka traveller who is a real persuader of orders (and not a mere ordertaker, to order)—a traveller who is a real persuader and creator of orders really employs the firm that employs him.

o o o

Mr. Cornwall, of Aberdeen, figured here the other week as the natural "charm" of a certain meeting. It was my fault no doubt that a contracted "Chairman" became a "charm." I dare say he lived up to the ascription right enough.

FRANK COLEBROOK.

The Formosan Paper Trade.

During 1912 the imports of paper at Formosa, the Japanese island, considerably increased, as the following figures show:—

	From China.	From Japan.
1912	£60,155	£85,558
1911	59,207	77,153
1910	54,614	60,459

NEW YORK is by far the most important State in the Union in the printing and publishing industry. Illinois ranks second, and Pennsylvania third. There was a total of 2,600 daily publications reported in 1909, as compared with 2,452 in 1904 and 2,226 in 1899. Of these 2,600 dailies, 760 were published in the morning, and 1,840 in the afternoon or evening. The increase during the decade in the total number of daily newspapers in the United States was 374, or 16·8 per cent., every geographic division but New England gaining.

THE Lord Mayor and the Lady Mayoress, accompanied by the Sheriffs and their ladies, opened, last week, at the Albert Hall, the 34th annual *Truth* doll and toy show. Upwards of 32,000 children are receiving toys this year from the *Truth* distribution.

TO TRADE BOOKBINDERS, BOOKBINDERS' PLANT AND MATERIAL MANUFACTURERS AND DEALERS, PUBLISHERS, LIBRARIANS, AND OTHERS INTERESTED IN THE BOOKBINDING INDUSTRY.

THE Publishers of the *BRITISH AND COLONIAL PRINTER AND STATIONER* have pleasure in announcing that an ILLUSTRATED MONTHLY SECTION of that journal is now devoted to matter concerning the BOOKBINDING TRADES.

All branches of bookbinding are dealt with, from practical and technical standpoints, and the historical and artistic aspects of the industry also receive attention. Illustrations of hand-tooled bookbindings and publishers' cases which are remarkable for their artistic design, their historic interest, or their novel character are presented from time to time.

The BOOKBINDING SECTION appeals to all those who are interested in bookbinding, whether as a trade or as an art, as all phases of the subject receive their due share of attention in its columns.

The Editor will welcome any news of trade interest that may be sent him, and is prepared to consider original articles of a technical and practical character, with a view to their publication. Information concerning the working of the technical classes in bookbinding, and notices of meetings of trade unions and other bodies associated with the bookbinding industry, are also invited; arrangements can usually be made, if desired, to report the latter, as well as lectures, etc., for the BOOKBINDING SECTION. Illustrations and particulars of new machinery and appliances, and information concerning new materials and methods for use in the trade, are likewise of interest. The publishers having no end to serve save the presentation of matter of value to the various branches of the trade, the pages of the BOOKBINDING SECTION are open to all, employers and employed, unionists and non-unionists, for the free discussion of trade matters.

As far as READERS are concerned, copies of those issues of the *British and Colonial Printer and Stationer* that contain the BOOKBINDING SECTION will be sent regularly on application, at special rates.

With regard to ADVERTISEMENTS, the bookbinding trade announcements are placed in a POSITION NEXT TO OR FACING READING MATTER in the BOOKBINDING SECTION. ADVERTISING RATES sent on application. Arrangements have been made to circulate the journal in quarters likely to be most productive to advertisers of a return for their outlay, and no effort is spared to study the interests of advertisers and readers alike.

Orders for advertisements in and subscriptions to the BOOKBINDING NUMBERS of the *British and Colonial Printer and Stationer* should be addressed to the publishers:—

THE PRINTING ART.

An Illustrated Monthly Magazine of the Art of Printing and of the Allied Arts
Issued by The University Press, Cambridge, Mass., U.S.A.

THE PRINTING ART is the most beautifully printed periodical in America. It is entirely different from the other printing magazines, in that it does not go into the technical details of the crafts it represents, but gives **actual examples** which are of service to the publisher, printer, advertising man and book lover. It is full of suggestion for typography, design, colour of ink and selection of paper stock, and will be found invaluable by those desiring to improve the quality of their work. PRICE 21/- per year. Single copy 2/-. Send this amount for sample copy to—

Metallic Pens in Italy.

For some years the Italian imports of metallic pens has been increasing to a considerable degree, and will henceforth represent a figure deserving the attention of pen-makers. The French pen is known in Italy, where some firms already buy it to a certain extent. However, there is no doubt that more business could be done, and that where some firms are making progress other firms should not stand aloof. The Italian annual imports of pens represent 700,000 lire, or £28,000, two-thirds of which goes to English firms.

This article is the more interesting as native competition does not exist or scarcely so. In fact, endeavours to manufacture metal pens have not hitherto given the required results, in spite of the facilities afforded by the Government as regards importation of raw materials. Consequently the market is almost exclusively supplied by foreign firms, whose agents pay regular visits to all the buyers in the Peninsula, who are very numerous, but usually reliable enough for credit on a small scale. In the large towns there are plenty of firms of importance.

Germany remained in the background until late years, during which she has made an effort to increase her exports to Italy, and as Germany occupies an important place in the market for office requisites, it is not difficult to foresee that she will obtain results, the signs of which already appear in the statistics for the last two years.

As demonstrated by the figures for certain years, French manufacturers are beginning to increase their sales abroad, and will, no doubt, endeavour to increase their trade with Italy.—*Technique Moderne.*

"The Editor and Publisher."
Leading Weekly Periodical of the United States devoted to the Newspaper and Advertising Fields.
Presents the Important News of the daily and weekly publications, their editors, managers and staffs. Gives lists of new papers, new incorporations and changes in interest. Prints articles on newspaper management, the latest improvements in printing machinery and methods for increasing circulation. One of its most valuable features is the department devoted to the subject of advertising. Each week it contains "Tips for Business Managers," in which is given the names of new advertisers, lists of old firms that are making new contracts for space, and general news concerning the entire field. Some publishers have secured thousands of dollars worth of advertising through the information thus furnished.

Foreign and British Paper.

Our Foreign Trade.

THE Board of Trade Returns for November show a small increase in the imports of paper and a decline in the exports. We give the comparative values, also for the eleven months, with increases or decreases compared with the corresponding periods of the previous year:—

NOVEMBER.

Imports ...	£614,618 +	£3,980
Exports ...	291,834 —	39,449
Re-Exports	21,088 +	1,762

JANUARY-NOVEMBER.

Imports ...	£7,026,346 +	£458,514
Exports ...	3,391,084 +	130,289
Re-Exports	269,447 +	102,227

Imports.

PRINTINGS or writings were largely imported last month, the total value showing an increase of £24,468. The extra supplies were in the form of "reel paper," the receipts amounting to £137,384 as against £109,533. Newfoundland was responsible for this expansion, as the imports from that country amounted to £55,746, an increase of £31,146 compared with November of last year. The shipments of reel paper from Norway were of the value of £43,555 (an increase of £2,329) and from Sweden £20,495 (a decrease of £5,779). Evidently the imports from Newfoundland are affecting the Norwegian and Swedish exports to the United Kingdom. Germany is extending her trade in reel paper, but the arrivals from the United States are practically nil, the value last month amounting to only £102. Printings and writings, not on reels, were received of the value of £68,431, as against £71,814 for November last year, the decrease being mainly due to a lessened importation from Sweden. The receipts for hangings and other printed or coated papers show an increase in value of £2,326. It is unusual to have to record a decline in the imports of packing and wrappings, but last month's value evidences a reduction of £4,367, Russia and Sweden being the countries responsible. Boards show a falling off in value of £8,696, and unenumerated and articles of paper a drop of £9,751. During the eleven months ended November, as compared with the corresponding period of last year, the only decreases registered apply to hangings (£6,271) and other printed or coated papers (£6,795). The increases are as follow:—Printings or writings on reels £40,786, and not on reels £37,232; packings and wrappings, £226,526; strawboards, £79,666; mill and wood pulp boards, £48,504; and unenumerated, £38,866.

Exports.

MOST of the articles of export last month suffered a depreciation in value. There was a drop of £22,721 in printings, which were in particularly poor demand for the Colonies. The latter bought £86,119 worth and Foreign Countries £54,874 worth, decreases of £19,279 and £3,442 respectively. The Colonial demand for writings was well maintained, the shipments thereto amounting to £26,923, a comparative increase of £455; Foreign Countries bought £11,586 worth, a drop of £894. Packings and wrappings show a falling off of £3,023, and the exports of hangings and other printed or coated papers mark declines of £7,030 and £847 respectively. The only notable increase was in paste, mill and cardboard; other articles, with the exception of playing cards, showing decreases. The returns for January-November, as compared with the corresponding period of last year, show an increase of £91,288 in the exports of printings, Foreign Countries being responsible for £49,979, and British Possessions for £41,309. The shipments of writings evidence a decline of £3,426, solely due to reduced trade with British Possessions. Packings and wrappings were in better demand to the extent of £41,098, but paper hangings and other printed or coated papers show losses of £5,034 and £18,586 respectively.

FROM the Wm. H. Pool Printing and Binding Co, of Chicago, U.S.A., we have received an office calendar in which the figures are bold and clear. The tear-off monthly date sheets are 17 by 12 inches in size, and neatly printed in red and black, a feature being that notable days in the American year are filled in with portraits, or emblems of the occasion, thus February 12th is absent, but its place is taken by a portrait of Lincoln, and July 4th is replaced by an American flag. Accompanying the calendar is a finely printed booklet and a Christmas card with 16-pp. inset, printed in colours. The various jobs show that the company turns out excellent work.

British Imports of Paper, etc.

In AMERICA

There is published only one weekly paper representative of the interests of employing printers. It is the most popular Printers' Paper read in that country:—

Because it is the Trade Business Journal.
Because it has a splendid news service, with twenty-two paid correspondents.
Because it deals with the practical always.
It is the only Paper which holds the attention of the man who owns the plant.
The PRINTING TRADE NEWS does not attempt to teach printers to set type, but it is the foremost authority on the latest efficiency methods, the organization activities, progress in cost system work, approved methods of printers' advertising and anything and everything that tends to make the printing business a pleasant and profitable one.
It is pre-eminently the trade journal English machine builders should use to make their product known in America.

We have good mechanics. Let us have good business men. Let the NEWS come to YOU every week. Europe $5.00 per year; Canada $3.00. 64 pages weekly.

From your Furnishers or Headquarters:

EDWARD L. MEGILL, 60, Duane St., New York, U.S.A.

The Original Inventor and Manufacturer.

Many styles. His Signature and Trade Mark on packets denote genuineness. ESTABLISHED 1870. Ref.—National Park Bank, of New York, having Foreign Correspondents.

The Harris Offset Press

THE yield of The Harris is one of Speed and Quality. The speed is obtained by a perfect Automatic Feed, and it is the only Rotary Offset Machine equipped with an Automatic Feed forming an integral part of the printing press itself.

5,000 impressions per hour (guaranteed) is the output of The Harris, and every sheet perfect. The Quality comes as a natural result

The Harris has been adopted by many Government Printing Offices, including—

RUSSIA.

For Complete Specifications, Quotations, and all further particulars apply to: . .
